Hi, can anyone help me with software for programming the MR8100 "out of band" What I want to do is programme the MR8100 around 75MHz. I have recently purchased the software from GFC Software but that does not work as it uses Uniden's scan.exe which excludes the use of this band.

Basically GFC told me their software would work prior to purchase, but now have changed their tune after they have taken my cash, oh well. The custom software from www.accessv.com will not work on these frequencies,either.

Does anyone out there have copy of Uniden's scan.exe that covers the 54 to 118 MHz spectrum ? GFC tell me that I should be able to find this on the 'net but I have downloaded from several sites but with no luck. Not sure if what they are telling me is correct.

Can anybody please help?? The Mr8100 is such a neat (vintage) scanner that I really want a full working version in my collection!!!

All replies appreciated!!

Cheers

Kevin

I have a DOS based programming utility for the MR8100. I have no idea if it will solve your problem, but I'm willing to email it to you, if you'd like? It's only 21k, zipped.

Thanks guys,

I have opened the unit up (thanks to disassembly instructions for a mod that I found when doing a "Google" for the unit) and everything looked OK as far as no corrosion as far as I can determine.

There are no programmed frequencies left after doing a "reset" with the internal reset button, however I was able to program some frequencies (including the NOAA ones) into the unit. I tried scanning and nothing caused the scanner to stop on a station, which is VERY unusual.

By the way, I have a NOAA (Midland) emergency radio - including regular weather forecasts - in the same room and it is OK, no problem.

This leads me to believe that the frequencies that I see are NOT the actual frequencies, otherwise I should get something (I would think).

Maybe a crystal is bad (there are two on the top board) but I do not have a schematic, but a parts list is available through Radio Shack. Not sure where the parts are available from, especially in ones or twos. Parts places usually want to sell 25 or more at a time.

I hate to take it back to the "Shack" and have them tell me that parts are no longer available, OR that it will take a bank loan to afford the repairs!

Thanks for your suggestions fellows, maybe someone can recommend a good repair person who doesn't charge an arm and a leg to look at it. I am retired and must watch where I allocate my retirement monies - of course that is true even if you are still working!

I was unable to check for replies until now (busier that when I was working), so my reply is a little late to both of you. As I said, thanks for the recommendations.

1666. Tampa Bay/Pinellas .p95 files

Newsgroup: rec.radio.scanner
Date: 2004-08-27 02:44:33 UTC
From: Captain Purple <webmaster@removemypants.com>
Message-ID: <lexXc.5379$%D6.989@twister.tampabay.rr.com>
Source record: 18631

Is anyone interested in getting, giving, or trading .p95 files for the Pinellas county area?

It might be very interesting to see how someone else programs or sets up the entire thing, i.e.
speed, ergonomics, logical (or illogical) usefulness, etc.

I could post 'em back to here, or if that's not allowed, I could put mine on a hidden website page
temporarily.

Not that I'm an expert or anything...

Oh, and there are no ham freqs included in the list.

I also have a rather complex XLS worksheet that I developed which MAY be of use to someone. It is
not trivial --- it's 446k with 7 tabbed sheets; it has 0-999 slots, work pages, safety copies, and
is designed to copy and paste entire banks if you like right into the win95 program. (odd that he
calls it win95, huh?)

suggestions?

Capt. Purple

It depends on the radio. A standard conventional system? Nope. The
radio cannot be disabled. Get into a higher end system, i.e. Astro
Sabers, or trunking, and it possibly can be 'killed' over the air.

But for the most part, if you can listen to the department over a
normal scanner, their radios cannot be modified over the air.

Not sure exactly sure if it is worth the scanner being repaired or not - may not be economically viable, but there are some reasonable pages on the net (below) that may be of assistance in helping you to fix the problem. I

suspect that unless you can find someone who does repairs for the enjoyment of it rather than for a living (there are some of those around, but few and far between), it would probably be cheaper to replace your scanner than fix it.

Hi fellow Enthusiasts,

I have found 8 frequencies within our trunking band (I searched for them and logged all that had voice)

Within the same band there is a couple of "open" channels with constant data type noise (control channel?)

I have entered trunking mode in bank 9, selected E2 UHF, then entered the freqs (including the "open" channel)

I am monitoring the same freqs on another scanner and can hear them, however the Uniden doesn't stop, just briefly shows the freq.
I am scanning in trunking mode.

I'm not sure of the offset, but can hear the same conversation on 2 separate freqs (415.5625 = 416.4625) is the difference the offset?

Also I think it is not stopping and tracking because I haven't done anything about talkgroups, how do I find out what they are?

if it is an MPT1327 system you won't be able to track it at all with
just the 245XLT scanner
it is not supported by that scanner, at the moment there is only one
scanner than is able to track it and that is the WInradio software radio

you will have to find either a motorola or EDACS system

Kev

once you have the freqs entered hit the search button, the scanner will
search the freqs for any signal and once found will display the
talkgroup on the screen, you will need to add all freqs, even the data
freqs
are you sure you have the right trunking system?
as I stated in you other post
MPT1327 is not compatible with the 245 scanner

I'm not sure if this is the place to ask about this, but with all of the GMRS/FRS handhelds that can be bought virtually anywhere isn't the FCC going to have a hell of a time with unlicensed people on the GMRS frequencies? I think GMRS is going to end up being such a free-for-all that the FCC will give up trying to license it, like they did with the 27 MHz CB service.

Downlink is 145.800 NBFM. I am using an Icom Ic-R100 with a discone but you can easily hear and work them with a ham handi-talkie just as well. I suspect they will be active on all US passes on Monday, Labor Day holiday. Check out the Satscape program (google.com search for it) so you will see and know when to listen...an excellent program. pcox

Matt,
Thanks for the links. I knew about the RS one, bit the other has a
multitude of other helpful info about repairs, Used and new units "on
special", so I may look into another one from the site owner (and
repair man, etc.). His basic repair rate for my type is $45.00 plus
parts and he wants an email with a description of how it is acting
before he will accept it for repair PLUS there is a 4 to 6 week
turnaround! WOW, maybe I should buy one of his $99.99 specials!

I am bookmarking the site. Maybe I can get a couple of bucks discount
by sending him my old one! - He is looking for a PRO - 39 and 43, so
maybe he will take my '37.

Hey, thanks again Matt.

juny

1689. Re: Texas Balloon Launch Team (BLT) to fly ham radio and GPS this saturday 10am

Newsgroup: rec.radio.scanner
Date: 2004-08-28 00:25:34 UTC
From: Craig Davidson <nospam@earthlink.com>
Message-ID: <2iQXc.464$8d1.336@newsread2.news.pas.earthlink.net>
Source record: 18754
Cross-posted to: rec.radio.scanner,rec.radio.shortwave,rec.radio.amateur.space,rec.radio.amateur.homebrew,rec.radio.amateur.equipment,rec.radio.amateur.digital.misc

The balloon was successfully launched last Saturday. It reached 83,000 feet over Texas before the balloon burst and the electronics payload parachuted back to earth. Amateur radio operators were heard talking through the cross band repeater from Galveston, Houston, Dallas, Austin, and Rio Grande. Recovery was as simple as entering the last broadcast GPS coordinates as a waypoint into a hand held GPS receiver and following the arrow to the landing site. Conveniently the package landed only a few hundred feet from a paved road.

Watch for future balloon launch announcements at:

Here are the photos from BLT-20

Quite possible. Although all the hand helds I've seen have such crappy
range (they might say 5 miles but I've yet to get more than 1 mile from
them) that it might not be an issue with the motorola talkabout style
units. The gmrs equipment that is powerful enough to somewhat warrant
licensing is only bought by people who go a head and get the license.
I just filed for my gmrs license. I figured since I had just gotten the
amature license it'd be best to cover myself for the unlikely event that
the FCC ever heard me while using a gmrs handheld

No problems Juny, unless I have a radio that is definitely worth it, I do not send them to the average repairers, but fortunately I have a couple of contacts who actually do repair work for free (or a case of beer) and I have also learnt by trial and error how to fix some of the problems myself. With an older scanner like yours, I would probably cut my losses and upgrade (always a good excuse).

Cheers

Matt

Hi All,

The main trunking systems used in NZ are:

TeamTalk MPT1327 Nationwide Trunking Network: 414-418MHz (mobile XMT.
The band is to be extended by approx a further 2MHz in the future).

MCS Digital RT EDACS 800Mhz Trunking (mainly used in the North
Island. A number of longhaul truck companies which used to be on the
MPT1327 TeamTalk system have switched over to EDACS. Plus various
business users. The Auckland Volunteer Coastguard also operates on
EDACS for training exercises and Spotter Plane OPs). 859-864MHz
(mobile XMT)

Antares Communications, Netcomm Services, Network Resources LTD King
Communications LTD, Radcom Rentals, TL Parker 800Mhz Motorola Trunking
networks.
(mobile XMT 859-864MHz). Also Ports of Auckland 800Mhz Motorola
trunking system & NZ Aluminium Smelters Tiwai Point Bluff South Island
800MHz Motorola trunking system. Auckland, Wellington & Christchurch
International Airports, various security companies, Skycity Casino
Auckland to name a few are all on 800Mhz Motorola trunking.

There's also a small 3 channel UHF 455-457MHz Motorola trunking system
operated by TeamTalk in use at the Auckland International Airport.
(total of 3 trunking networks used there. (1, 400MHz UHF & 2, 800MHZ
Moto).

Not confirmed but NZ Oil Refineries Marsden Point my also be using
their own UHF 400Mhz trunking system not sure if MPT1327 or Motorola?

Regards, Marian P Rogers New Zealand

In other words...RTFM :)

Trunking allows you to listen to trunked systems....google search "trunking FAQ"...this should give you some idea of what your scanner can do...

It depends on what his needs are! I do frequency related work, lots of it... NONE of my work touches 2.4 GHz and most likely never will. I have a few freq counters, each with a different range, but none more than 1.3 GHz..... IF his needs don't approach that range, he may be able to save a few bucks. To mention 2.4 GHz - to me, sounds like you're thinking he's going to be hunting down the newer series of cordless phones.

It is Sunday morning, and since 12:43am EDT (0443z), and I have been
hearing a steady stream of acft arriving at MacDill AFB which seem to be
evacuees from Charleston AFB, in the path of the big tropical storm.
Since 11:30pm Saturday, I have heard HurrEvac 03, HurrEvac 04, HurrEvac
05, HurrEvac 06, HurrEvac 07 HurrEvac 08, HurrEvac 09, and HurrEvac 11, all
C-17s arriving at MacDill. They are all announcing "no-cargo" and "no pax,"
except two which had three pax.
The handoff sequence for the Charleston AFB C-17s streaming into MacDill
AFB tonight seems to be:
135.45 (Jax @ Albany) >
125.175 (Jax @ Lowell) >
118.8 (Tampa Appr) >
123.7 (MacDill Twr).
Also 135.75 (Jax @ Lowell) and 132.825 (Jax @ St Augustine)
Also with Lightning Ops on 311.0, and MacDill PTD on 372.2.

The packet repeater is operating in FM mode. Next East Coast (USA) pass is at
1309-1319Z, Sunday morning. Downlink frequency is 145.800 FM. You must adjust for the doppler shift: start listening up 145.808 then moving down following the strength of the satellite to 145.795. Satscape is the best free program to track the satellites on your computer. pcox

Hello,
I have a few left, brand new custom fitting leather cases for the
Pro-96/95/93
These are very nice quality and fitting cases.
Price $29.00 plus $3.95 shipping
e-mail me directly at trd150@dccnet.com

May not be a bug. Possibly you have a defective radio. I've been using the BC898-T for several weeks now, and I have CTCSS programmed where applicable, and it's been working flawlessly!

Is there a reason that the audio output level coming from the speaker and from the line out jack don't agree with each other on this thing? I also wondered why is the line out jack amplified to begin with.

I have to turn this thing up blastingly loud to get any recordable sound from the line out jack. The only remedy I know of is to record via the external speaker jack with a Y-connector plugged into it and my recording device and speaker/headset plugged into the branches. Quite convoluted I might say.

The early ones would not hold the lockouts, which made use impossible since
it is a pre-programmed scanner.
I sent it into Uniden and they did the firmware update to cure it. You
probably have a later manufactured unit.

Wired> one for most things. Plug a discreet earphone

Or get stereo walkman earphones, and tap your toes and snap your fingers, they'll never guess. A phony walkman dangling from your neck completes the picture. Or dress the scanner up as a walkman. A mono earphone here would be a dead giveaway.

Older non toe tappers can dress up as a sports fan with an old AM radio clipped to their belt but the actual wire to the ear would be coming from the scanner, whilst the scanner is hidden in a pocket. Here we use an old white mono earphone.

When the authorities come, slide the whole mess in your pants. the rubber ducky bulge is no problemo; "After the operation I was left with a permanent `boner'", you say. But as you have unfortunately dislodged the earphone jack, you are cut off by a gruff "1 Adam 12 see Mrs. Nurdsbury about stolen napkins, over" emulating from your trousers.

Hi guys,

Long time listener, first time caller here.
I have a question.
Is it legal to carry a police scanner in my car?
I have no interest in monitoring the police.
I have the scanner in case TSHTF and I need to hear what's going on.
Wind direction and weather from KEC83, local radio, instructions. That
sort of thing.
I live in Maryland and work in Baltimore City.

I Googled but didn't come up with much.
Maybe a good site recommendation?

Thank you guys. Great NGs, very informative.

Sandy.

In many areas that I have lived, it was only illegal to carry a
scanner if 1) you were using it to commit a crime, and 2) if you are a
convicted felon.

Check with your local law enforcment agency, laws vary on this.

You look to be in the clear, however, who knows these days. I'd check with
a local State Police post with regard to the laws in your state...

Information provided by:
http://www.afn.org/~afn09444/scanlaws/scanner5.html

I believe licensed HAM's can carry a scanner even in areas where local
laws prohibit the practice. Check with your local police.

Hi

It's probably legal as long as you're not using it for an illegal purpose.

On the other hand, Murphy's law says any police officer who pulls you over and finds the scanner will not know this or will presume you're using it illegally. There's not much percentage in arguing with a police officer who has pulled you over, even if you are right.

So if you're not using it, keep it out of sight, and don't volunteer that you have one if you get pulled over.

It varys by state. Some places its illegal to carry a scanner without
a ham license. Michigan for one unless they changed it.

Good Day,
Have any of you any experience using the Freedom Antenna sold here
http://www.westernwireless.ca/antamer/antprice.html.
The $73 bucks seems a bit steep.
Just want to know if this worth the investment.
Thanks,
Ted

Well Stephen, it matters what you are interested in monitoring...

Port Authority is EDACS, but Nassau Cnty PD is digital, however Nassau
Public safety is EDACS, but Manhattan [for the most part] is Motorola
Type II Smartnet.

Here on the west coast, I went for the Pro-95 because the county next to
me is EDACS. I also have a BC 895XLT that handles the Motorola Type II
in my own community. Agreed, there is a lot to listen to out there!

If you want to listen to the "whole enchilada", you might be better
served getting one of the Uniden digital units, or one of the Radio
Shack's Pro-96.

If however, you live in the "...Hamptons", you can probably afford to
buy one scanner to receive each type of transmission... ;->

Here are the Uniden/Radio Shack Yahoo! group for their digital units:

http://groups.yahoo.com/group/Uniden_BC296D/

http://groups.yahoo.com/group/pro-96-2096/

Have fun and let us know how you've make out...

If and when TSHTF the mushroom cloud will get ya before the scanner tell's you to bend over, place your head
firmly between your legs and kiss your abs goodbye!

So what if it's illegal? It's illegal to speed, beat the wife and tons of other things folks do everyday, not me, others!
If you want one get one, go get it. If it "illegal" in your area find one on ebay.

Now if you are robbing jewerly stores and using it to figure out how long till the cops get there your probably going to prison anyway so whats another few months for having a scanner.

If it's not illegal, but it can be like incriminating evidence :o/ Small time drug dealers use them a lot. There's a world of difference in how the police view it between having one in your home or having it in your car. Why would you have one IN YOUR CAR either to evade police or go to crime scenes?

> I have no interest in monitoring the police.

Why would you need it in your car just to know what's going on?

A good AM radio can pick up AM stations a long way away.

I asked a Oklahoma highway patrolman that question when he pulled me over.

He told me that I was OK as long as I wasn't using it in the commission of a
crime
or making a pest out of myself by checking out wrecks, drug busts and such.

Ask your local law enforcement.

Dave

If you are really interested in what EDACS, Digital, Motorola Type I & II are, what they acronym means and how they differ, you'll have to wait for someone in the group smarter than me... You might want to do a "google search". I'm sure that you'll find something. The 895 XLT cannot receive EDACS, by the way, just the Motorola I & II.

I am set up primarily for the city/county fire departments, Cal Div of Forestry and the US Forest Service. Currently, they are either on AM or FM. Wildfires are the bane of California & other western states, but happen they do, every year.

BTW, I have friends who lived in Hempstead and Huntington. Me? I lived in Newark up until 1972. Couldn't take the mosquitos any longer. Now, I live near the desert. Big change...

check it is not the earphone socket first, put an earphone into it and
check.
if the earphone is also low it will either be the series electrolytic
capacitor or the audio chip itself.
(normally goes funny if power is reversed)

Claiming 3dB gain regardless of frequency is just pure nonsense
There are no patterns available and the independent study appears only to
have been measuring radiation from the coaxial shield.

Pure junk, directional as all hell. One minute you hear the signal,
turn the corner and it disappears. Their db claim is bogus, a coat
hanger would work better. They are way too small to even work
marginal on VHF. For that money you can do better.

Minnesota is another one of those states that insists you have a ham license
to carry scanning equipment in your car. If you aren't a ham, one can apply
for a permit to have one too.

Hmm, well, I have the 95 and I really like it. I can't think of any particular drawbacks, unless you really want the digital stuff, in which case this won't do it for you. It really is a nice scanner for the money. Watch Radio Shack ads for sales. I was able to get this around last Christmastime for $149.99.

If you don't have a satellite prediction program handy than just go to:

http://www.heavens-above.com

and click on "select your location" then select your country and city.

You should then arrive at the "Heavens-Above Main Page"

click on the link that says "Radio amateur satellites - 24 hour predictions
(all passes)" to get one day's worth of predictions.

scroll down the list for the ISS.

I can hear the ISS just fine on a simple quarter wave antenna. However if
you want to use a hand held beam then I recommend the arrow antenna. I have
one. It works great.

http://www.arrowantennas.com/146-437.html

Have fun!

Craig

Hi, I just purchased an aor mk3 and am very happy with it as a scanner. I wish the audio was a little louder though. I use it with an amplified speaker from radioshack in the car. I was wondering if thats as loud as the handhelds get?...My motorola ht1000 at work is much louder. Do they make any with better audio?..ex, yupi, icom, uniden?....thanks Rick

>might say.

Convoluted but familiar. Something similar's happened to me before now.

Usually the cause is that the output stage is designed with driving a
<32 ohm load (the speaker, headphones). Connecting to the line in of
a sound card/tape recorder -- which has a much higher impedance -- results
in no sound, weak sound, or sound that starts ok and fades out. The output
stage is trying to deliver current into a high-resistance, and it can't
do that efficiently. Speaker outputs are about current transfer, line outs
are about voltage transfer, broadly speaking.

Your Y-adaptor bodge works because it is correctly loading the output
stage, and you are tapping the signal present across the load.

Without the speaker as a load, and without the headphones etc, the output
fails to achieve a useful voltage.

You could make a lead up with, for example, a jack connector to plug
into the scanner, a piece of screened cable, and whatever connector you
need at the far end for the recording device, and then fit a resistor
across the signal and earth at one end of the lead. This provides the
load the amplifier is looking for.

Or you could buy a ready made lead (openable, not moulded!) and adapt by
adding a resistor. The resistor would need to be sufficient to provide
a load. Try 100 ohm, 64 ohm, 32 ohm in order until you get some useful
level.

Don't know about going to RS for 'software updates' but you can program the 95 from your computer. Look for other posts on programming. Get the cable at www.blackbagsoftware.com and I think the pro95 software is at starsoft.com (?)(someone correct me if I am in error there..) Very easy to program and change.

Pro 95 from Radio Snack has excellent quality sound. by the way why use an
amplied speaker when you can
use a car kit if your car has a cassette player? Grab one and use the
benifit of the car's stereo system.

Since you have a computer you can program youself. There is FREE software at www.starsoft.com and a cable can be found at www.blackbagsoftware.com (I don't think RS even carries either anymore.) There are lots of sites that will give you frequency lists.

As for the channel bank 'locking up' there are some channels (control channels I think-BUT I AM NOT AN EXPERT-so if I am wrong I hopefully will be corrected) that are constant static and the scanner never gets by it. My suggestion would be to lock out all channel banks but the problem one and watch for which individual channel/frequency is causing the problem...and just lock that channel out. I had the same problem and that's how I fixed it for me.

Good Luck-I have a Pro95 and have been very happy with it. I got the programming software and cable and it makes it VERY easy to attach alpha tags to every frequency in addition to changing stuff. I use mine for races also and have been able to adjust quickly before I go to different series.

OK enough ramblings...post if you have more questions....

That is about 75% of the reason I went and got my FCC license - to legally have a scanner in my vehicle. It is well worth the effort. Now that I am a ham radio op I do 2-meters on the road now, too...beats the hell out of CB:)

You might check the archives of this group for a recent thread
using the words "mobile" and "installed" There was an issue in some
state over language in the law about requiring mobile scanners to be
"installed" i.e., does a simple lighter power plug constitute
"installed" or must it be hard-wired and non-removable?

Selcal is a two-tone 'tag' similar to the alerting system used in fire/EMS dispatch systems. It is used to help air route controllers keep track of flights. ACARS is a computer data network on the VHF air band used for routing flights. There's a similar network on the SW bands called HFDL, not used as often as ACARS though.

Selcall is an abreviation for selective calling that allows a radio to be muted until it is called. I use it on both UHF CB (in Australia) and on HF with some private HF freqs. When used on freqs with multiple users, it is an effective way to not have to listen to other users and not have the annoying noise from the HF bands. There are different types of selcall, but most these days will send both the number of the station they are calling and also the callers ID number. Usually there will be a preamble (long tone) at the beginning of the selcall followed by two musical tones (similar to DTMF, but longer tones).
ACARS is a means of passing information - i.e. it is a digital data mode and sounds like a lot of other digital data modes, but is used specifically for aircraft to pass messages to a variety of groups (i.e. their technical or operation guys).

Unfortunately few of the police officers would really know what they are talkinga bout when it comes to enforcement about laws on scanners and would probably give you the wrong answer out of ignorance or misguided intentions. Thankfully in Australia, the power to regulate scanning and other communications issues rests with our commonwealth government (i.e. federal government) so the state government (and police forces) have no powers to deal with the issues relating to communications. Have seen a couple of state coppers very pissed off when it was pointed out to them they they had no legal right to confiscate scanners etc (unless used in the commission of a crime) - still, it makes sense not to be too open when using your scanners.

Message-ID: <4136D39C.77FA0C04@earINVALIDthlink.net>
Source record: 18500

In late May 2004 I bought a PRO-95 over the counter at Radio Shack. It's the only scanner I've ever owned. I'm generally pleased with it, and believe I got my money's worth.

Sensitivity is good. Indoors with the stock 6 inch antenna, in my small Southern California desert community, there's plenty to hear. In fact, I have to keep some banks and channels turned off or the amount of chatter would be unbearable.

Its construction seems solid enough, though I haven't drop tested it yet.

The slippery, small diameter knobs look cheap and feel cheap.

The keyboard is satisfactory. But I think it's almost too small, even though my fingers are slim. I wish Radio Shack had made the scanner a little bigger. There'd be room for a more comfortable, spread-out keyboard and a larger speaker.

Speaking of the speaker, it puts out ample volume for hand-held listening outdoors. The audio is annoyingly piercing with some female voices, but I guess that's better than a muddy sound.

I briefly tried the scanner in my car, but found it too distracting while driving. Not the scanner's fault.

Simultaneous scanning of conventional channels plus EDACS and Motorola trunked systems works well. Once in a while there's a trunking glitch, no big deal.

The manual is fairly thorough but poorly organized. Every description of this scanner I've seen on the net seems to mention the lousy manual.

In my opinion, the PRO-95's main weakness is its firmware. The user interface gives me the impression the various functions were programmed in haphazard fashion by different people who never talked to each other.

For example, consider the delay setting. For a conventional (non-trunked) channel you have a choice of either 0 or 2 seconds. I've found this too short. If the channel goes dead for just 2 seconds, the PRO-95 loses interest and resumes scanning. It's like watching TV when someone with a short attention span has the remote control. Yes, there's a way to manually hold a channel, but it's badly designed. I'll get to that shortly.

For trunked systems there's a more flexible delay time control. You can adjust it in .5 second increments from 0 to 4.5 seconds. Though I'd like an even wider range, it's an improvement. So why are we stuck with a choice of either 0 or 2 seconds on conventional channels? As I said, it's as if different people programmed various functions of the scanner, and there was no coordination between them.

A glaring example of that is the lack of a single button to make the scanner stop when it comes across something you want to monitor for a while. In SEARCH mode you press the PAUSE button. But if you're scanning, you must press MANUAL, unless the signal is on a trunked system, in which case you press and hold TRUNK for about one second. If you press MANUAL by mistake, you lose the voice freq and get the screech of the control channel instead. If you fail to press TRUNK long enough, you store that talkgroup in memory instead of locking the scanner on it.

Some of the button-ology gets even more archane than that. Like the key sequence for changing a trunked bank from open to closed mode, which I do several times a day. You use MANUAL to access a channel (any channel) in the trunked bank, then press FUNC, then 5. Talk about non-intuitive!

The SEARCH function is poorly implemented. Its purpose is sniff out active frequencies you weren't aware of, right? So why does it stop on freqs you've already loaded into channels? When SEARCH hits an active freq, it should stop, check the channels for a match, and if one is found, automatically move on.

I could go on, but you get the idea. Don't get me wrong; I paid full retail and believe I got my money's worth. The PRO-95 is a good beginner's scanner. But it could have been so much better with well-designed firmware. My second scanner probably won't be from Radio Shack. I'll give some other company a chance to impress me.

p.s. I have a calculator and a GPS receiver in the same price range as the PRO-95. Both have serial cables you can connect to your computer to upgrade the unit's firmware flash ROM. I don't know if the PRO-95 has such capability. You can definitely load it with data, however (frequencies etc.).

Since it comes with two battery holders anyway, I keep NiMhs
in the rechargeable holder and a set of alkalines in the other holder,
to swap in if the NiMHs crap out. I guess it might be even simpler to
keep NiMHs in the second one if I didn't mind recharging them
externally.

Hi,

Tried playing around with the free WACARS program for receiving Acars.
Pretty neat.

Was wondering if anyone is using the not-free AirNav Acars program,
and has possibly some opinions on it relative to the free Wacars one ?

Is it worth buying compared to WACARS ?
Why ?

What does it offer (extra) that justifies the price ?

Thanks,
Bob

I've searched the web with no luck and was wondering if anyone on here knows of any live scanner feeds from Florida's east coast that might be good to listen to in anticpation of the hurricane. Any sites specializing in VHF Marine frequencies would be great.

Thanks to anybody that can help.

Hi
I'm looking for a base station scanner with trunk traking
and alpha tagging would be a nice option.
Something like the BC895XLT, Radio shack pro 2052
or BC780XLT

if anyone has any other suggestions for a base scanner
comments would be greatly appreciated

Ham operators are legally able to carry scanners as a part of their
"licensed obligation" to carry and forward emergency information to the
general public. Joe blow is generally frowned on about having a scanner
because the police immediately suspect that you would only need the use of
the scanner to evade the police in the commision of a crime. Or something to
that effect.
You should check with your local smokey to be sure.

I have such a marine site, however, there is no marine traffic when all the cruise ships have evacuated, police, fire and CG boats are hauled and trailered away or otherwise safely secured, and all boating activity comes to a screaming halt. After taking care of their family's needs and securing their homes, boat owners are securing vessels as best they can, not venturing out to fish or sightseeing. During the hurricane, neither USCG, police, fire or ambulance will respond to any calls for any reason after wind speeds reach a certain level. All emergency responders are ordered into shelters then, no exceptions.

Scanner sites that cover police/fire feeds might have very interesting comms *after* the hurricane passes through a given area.

First of all, there are only three kinds of people to a cop. Cops,
cop's families and suspects. Second, never ask a cop about the law.
They don't know dick about it. If they did, they'd be lawyers.

Russ

Hams are allowed to have a mobile radio that can receive police
communications IF that function is secondary to the amateur communication
function. At least that's how I interpret the law. Many dual and tri-band
fm transceivers have wideband receive as a bonus. A *scanner* might still
get you in trouble.

In most cases you just have to figure it out from what they're talking about. You might also get some clues from their codes. For example, our county deputies use the usual "10-4", but the city police use "oh 4".

Our local system has almost all county agencies (animal control, parks, utilities, building inspectors, etc.) so there are many talkgroups I don't want to bother with. But, after hours, most of them go away, so I run the scanner in "open" mode in the evenings to look for new activity. Rarely-used talkgroups also tend to pop up during emergency events, such as hurricanes. Then, as you've found, the hard part is figuring out who they are.

Scanner A sensitivity:
160 MHz ~ 370 MHz AM 1.0 uV (10 dB SINAD)
SSB/CW 0.5 uV (10 dB S/N)
NFM 0.5 uV (12 dB SINAD)
WFM 1.5 uV (12 dB SINAD)
370 MHz ~ 520 MHz SSB/CW 0.5 uV (10 dB S/N)
NFM 0.5 uV (12 dB SINAD)
WFM 1.8 uV (12 dB SINAD)

Scanner B sensitivity:
50 MHz ~ 700 MHz AM 1.0 uV (10 dB S/N)
SSB/CW 0.2 uV (10 dB S/N)
NFM 0.32uV (12 dB SINAD)
WFM 0.79uV (12 dB SINAD)

Me thinks scanner B is better. Am I right?
Could someone enlighten me?
Thanks in advance.
-Jim

The second set of figures cetainly indicate a much more sensitive receiver, but there is no indication as to the selectivity of the radio - i.e. how well it handles strong transmissions from adjacent frequencies whilst still being able to receive the desired frequency. You would also have to compare numbers of channels, frequency coverage, cost, ease of use, how well constructed the radio is, and whether you like it's ergonomics in order to determine if it is the best for you.

UNIDEN BEARCAT 16 channel scanning radio BC 147XLT

This is a 16 channel direct entry model covering 10 bands. It's frequency coverage includes: 29-54 136-174 and 406-512 <hz.

Comes with AC supply, telescoping antenna. Unit has volume, squelch, Weather button, ext speaker jack.

Used, tested, and is guaranteed to be fully working.

Buyer pays shipping and handling cost of $10.00 to the US. Elsewhere please send me an email. PayPal & Postal Money order accepted only.

For auction on eBay:

I have the 780, the RS 2053, and the RS PRO-95
You can do the most with the 780XLT. It has ALPHA. CTSS (not rapid seek), ID lockout, and about the best ears on 800 Mhz of the bunch - at least it is compatible with using a super pre-amp to pull in distant stations.

My BC895 did the same exact thing but after I reset the CPU, and dumped
the memory, the problem went away. I was hoping that this problem would
have been fixed with the new release, but I guess not.

>But not NOAA weather radio at 162.5mHz.
>

NO\AA weather radio isn't any good anyways. During a recent "weather emegency" here, which all of the tv stations that had news departments, reported on as soon as happened, you wouldn't even know there was any weather emergency by listening to NOAA.

I listenedto both during that time. NOAA was four hours behind, still playing the weather from before the "weather emegency" with no warning about it .

while the tv stations all told about it.

and after the "eather emergency" was over, NOAA was still playing the weather report from hours before the "weather emergency" ever happened.

I thought NOAA was the preferred weather in a weather emergency. But now I know better.

During a "weather emergency", NOAA didn't mention it at all, while all the tv stations did.

Therefore, I now know that the tv stations are preferrable for information regarding the weather rather than NOAA.

eapecially in a "weather emergency".

Funny thing -- we've heard from people with comments like,
"Why would you need a scanner in your car? What would you be up to?"

Anyone care to muse on what it might be that the cops don't
want you to hear?

Maybe they don't want to attract people to places where police
misconduct might be occurring while it's in progress. After all, if
you're within a few blocks in yout car, you might just happen to drive
by with a camera running.

Apparently you must be tuned in to the wrong frequency or have the wrong
SAME codes set...

Where do you think those weather alerts on your TV come from? Why, NOAA of
course! At least that's the way it works around here... NOAA alerts the TV
and Radio stations who then relay it to the public...

ONLY NOAA CAN ISSUE WEATHER WATCHES AND WARNINGS, no one else!

A few years ago someone taped LAPD cops on their car-to-car frequencies using racial slurs and deragotory comments aimed at minorities which resulted in disciplinary actions against the offending officers. I would imagine that they would be rather apprehensive and somewhat hostile to the average scanner enthusiast and regard us in the same vein as video vigilantes.

The best up-to-date news for weather is your local amateur radio 2m-440 SkyWarn repeater. Local TV news stations monitor those frequncies as well as NOAA alerts, but with SkyWarn you listen to the hams describe weather at their various locations and you can track any storm cell right to your backyard when monitoring their transmissions - very handy in bad weather conditions

You will need a telescopic whip antenna on your receiver that you can aim toward the station as it passes. This is the bare minimum for receiving anything off a satellite; a fixed vertical base or mobile antenna will not work. I have often been able to receive signals from satellites using a whip on a handheld receiver. You have to know the trajectory of the station during the pass, that is, the azimuth (compass heading relative to your position on the earth) and elevation (angle above the horizon). The best results will occur when the pass has a high elevation angle. Set yourself up to be able to point the antenna in the right direction when the station is at its peak, and you will definitely receive at least a little bit. For more practice, try monitoring the AO-51 and AO-27 amateur satellites, too. There is always a lot of activity on them when they pass over North America. See this article for some good tips: http://www.amsat.org/amsat-new/echo/EchoHT.php. Also check out the www.amsat.org site for lots of good information.

First you should try to get an idea of what types of signals you can monitor in your area. For instance, if your local police use an encrypted digital system, no scanner will allow you to monitor them. If they use a conventional analog trunked system, then I would recommend a trunk-tracking scanner, like the PRO-94 or PRO-95. If you have a lot of unencrypted digital (APCO-25) systems around you, then a digital-capable scanner like the PRO-96 (which is also a trunk-tracking scanner) might be the best choice. Of course, if you're in an area where they don't use digital or trunking, then anything will do, and you can pocket most of that $800.

The AOR is a fine unit, but it is way overkill for most conventional scanning. If you think you might get interested in HF and shortwave listening, then you should consider a different type of unit altogether, since the HF performance of the AOR (and pretty much any handheld HF-capable receiver) will not be that great compared to most SW receivers, although for standard SW broadcast, it should do just fine. Moreover, you probably will never have a need for receiving anything over 1.3 GHz, since most, if not all, of that uses digital or other specialized modes. In fact, I own an AOR 8600MkII, and I'm trying to figure out why they even sell analog-only receivers that go as high as 3 GHz. On the other hand, maybe I'm just underinformed about what's available to listen to above 1.3 GHz.

Yea, they are trying to get rid of current versions of the PRO-96 because they have a firmware defect
concerning the reception of analog trunked talkgroups. Buyer beware.

Why not get a Uniden? So you don't have to put up with Radio Shacks BS.
The 250d with out the digital card is about the same price.
Go to (scanner world .com) and have a look.

Does any one have the programing codes for this scanner. I did a web search for the scanners porograming. found a lot of programs for the scanner but nothing that told me what the codes are for programing the scanner. I found the codeing for the bearcat 895, and though I haven't looked for the BC780 I could most likely find it.

What I want to do is to develop a program that will allow me to take the data file used by WinScan780 and convert it into a file that can be uploaded to the pro95. Seems to me it should be a simple translation program.

I would appreciate it if one of you could point me to where I could find this data.

YEah radio smack programed my scanner and only did the national stuff not the local stuff. I quess because it was a radio, not a cell phone, not computer, not an RC toy they have a hard time relating to a scanner.

Win95 is a fair program it will load your scanner.

I would like to find the "code" to write a programs the pro 95. It might be fun and frustrating all at the same time.

There are no programming codes for the PRO-95. Programming is accomplished by completely rewriting the scanner's memory similar to the way the clone function works in Uniden scanners.

Of the several programs that support the PRO-95, the one to use is Win95 from Starrsoft. If you can copy and paste data from Winscan 780 into Excel then you can transfer the spreadsheet data into Win95. Details are at http://www.starrsoft.com/freeware/win95/win95formatter.xls.

Well, it's not built to ham radio standards, so that's expected.. It's
still better than some others out there..

> >

I agree about the speaker, but since almost all my handhelds have been
the same size or smaller, I have no real complaints about it, except it
will need to be replaced in a couple of years, like all Uniden/GRE made
radios..No biggie, I can do it in about 10 minutes..

> >
> > Speaking of the speaker, it puts out ample volume for hand-held

I've never seen a RS or Uniden manual that's worth anything for a newie
or someone who is buying their first trunking scanner. There is much
better info on the net. You haven't seen a bad maunual until you read
one for one of the ICOM scanners..user friendly they aint, and the
manuals are even worse..

> >
> > In my opinion, the PRO-95's main weakness is its firmware. The user

> > to each other.

It's MUCH better than some of the other scanners out there, in fact,
it's better than almost all of the rest. Some of them have keypress
after keypress to do the same thing it takes 1 or 2 for the 95 to do.

> >
> > For example, consider the delay setting. For a conventional

Um, I've had scanners since 1971 or so, two secs is fine.. Once in a
while, someone is slow to respond, but I've had a couple of scanners
where you can set the time, and I always end up back at 2 secs..

Yes,
> > there's a way to manually hold a channel, but it's badly designed.

Umm, pressing Manual is bad??

> >

There probably wasn't much, but it's a non issue, IMO.

Well, it takes practice. Works fine, better than the Uniden setup.

> >
> > Some of the button-ology gets even more archane than that. Like the

Well, you have to consider the size of the thing..The same thing applies
to any device under a certain size. My cellphone has menu after menu,
it's much harder to do almost anything on it, than it was on any scanner
I ever had..

> >
> > The SEARCH function is poorly implemented. Its purpose is sniff out

It's the same search as has been on scanners forever, you just lock out
previously heard channels. It works better than almost any other setup,
and putting the function that you want in would make it more $$$.

> >
> > I could go on, but you get the idea. Don't get me wrong; I paid full

You'll be looking for a long time, the GRE built 93 and 95 (and the
other GRE built PS scanners) are very easy to use verus about any other
scanners out there, including the Uniden made PRO 94. I'm long past a
beginner, and I have over a dozen handhelds, but the 93 (same as a 95,
just less channels) is my primary choice. Ease of use, sensitivity,
strong signal handling, all make it an easy choice to make..

Not to mention it doesn't have the Uniden battery pack nonsense..

But none of the Uniden made RS scanners do either..

True. Which is why even a ham should print out and carry a copy of their states' statutes regarding scanners if they live in a state like Minnesota; i.e. where only hams can have scanners in their cars (or if you've gotten a "special permit" from the state to have one in your car). Even though I don't have a scanner in my car, many mobile amateur radios have extended coverage that can pick up the police bands in the 150 MHz range, which makes them "scanners". I printed out a copy of the Minnesota state statute and a copy of my amateur radio license and I keep them in my glove compartment, just in case I ever get pulled over and a cop notices my 2 meter radio. The statute's very clear as to who can and cannot have a "scanner" in their car in Minnesota.

I can add a couple of annoyances. Frequency steps can't be changed except in trunking mode. It always defaults to the pre-programmed frequency which may not be exactly the freq. I need. And you can't lockout group ID numbers in the open mode, like you can in the Pro-91, which is crucial for searching for and finding new group numbers. It keeps locking up on the data group ID in the open mode.

Is this a legal definition? I would expect that a scanner
would have to have the capability of automatically "scanning" a number
of frequencies.

Not that this would dissuade the kind of cop who takes your
carrying such documentation as a personal challenge to his authority.

Here is the text of the Minnesota statute... you will see it says nothing
about "scanning" frequencies. A "scanner" here is defined as a device which
can receive police frequencies:

"299C.37 Police communication equipment; use, sale. Subdivision 1. Use
regulated. (a) No person other
than peace officers within the state, the members of the State Patrol, and
persons who hold an amateur radio license issued by the Federal
Communications Commission, shall equip any motor vehicle with any radio
equipment or combination of equipment, capable of receiving any radio
signal, message, or information from any police emergency frequency, or
install, use, or possess the equipment in a motor vehicle without permission
from the superintendent of the bureau upon a form prescribed by the
superintendent."

> Not that this would dissuade the kind of cop who takes your
> carrying such documentation as a personal challenge to his authority.

I would bring it up to a judge in traffic court and lodge a formal complaint
with the PD, if it had to go that far.

You can email the author of WIN95 and attempt to get some starting point.
Since nothing is published I started
my monitoring the traffice between the computer port/scanner and attempting
to figure out what was being sent/received
for what commands, I quickly gave up and it was going to take way tooo much
time. Now if no one had already done it
I would of kept it up, created a program and sold it!

Hah. You don't remember the case of the kid who was an ARES worker a
few years ago... had an RS HTX-202, which had no out-of-band
capabilities at all, cop stopped him, kerchunked his radio and --
surprise! -- it desensed his police radio. Confiscation and charges
ensued.

It took a lot of work and time (years) to get it untangled, and it was
a headline issue with ARRL for quite a while.

The only good news to come out of it was that particular police
department got publicised as the shitheads they were. I wonder if
there's an active ARES chapter left there...

...search engines are wonderful. Here's a more accurate summary of
the endgame:
> Charges dismissed in Godsey case: It took more than two years, but
> all charges against a Kentucky ham for impersonating a public servant
> and disorderly conduct finally were dropped in December. Greg Godsey,
> KF4BDY, of Hopkinsville, was just shy of his seventeenth birthday when

> family spent more than $3000 fighting the charges against him.

Source: http://www.arrl.org/news/stories/1999/02/23/3/

I would have fuckin' sued to bankrupt the city. Not that I'm bitter
about power-mad authority types, oh, no.

(Local situation is much better and I am an ARES member. Cops here
actually treat us with respect, and get the same in return.)

Fortunately, I believe it's the same way here, at least with several PDs
I've worked with. They have actually requested the assistance of a couple of
local clubs I've belonged to when there've been local fairs and large
events. I also belong to a club that works directly with county public
emergency personnel. Perhaps this is the exception rather than the rule.

I need help, and I can't find anyone smart enough to help me. I have a 802.11b network where I live and I feel like I'm under attack. My WiFi cards and my bridges see no other networks, my router reports no attack or other anomalies. According to my Linksys WET11 bridge I have a 65-78% signal strength (intermittent) with no Link Quality. My instincts say it is some kind of interference, but I have no clue on tracking/locating/identifying it.

Any ideas??? I'm desperate.

Thanks in advance,
Scott

dect phones are the normal culprits.
they have a somewhat greater range and higher power.
as do video senders.

however i think you may be just a little premature here.
try changing channel away from 6 or 11
there might be other networks that are not SSID'ing but i would not expect
every channel to have multiple signals.

what kind of range are we looking at here as to the failure you are getting.

mike

Newer cordless phones, cellular phones, wireless video transmitters, and microwave ovens, can all cause interference in the 2.4GHz spectrum.

You might also post in: alt.internet.wireless, and microsoft.public.windows.networking.wireless

But there are a lot of exceptions. Michigan and Pennsylvania are
notorious. I'd work with the Salvation Army, the Red Cross, any
humanitarian organization you could think of in those two states, but
I would never, ever work with any of their police departments.

The plug is a Cinch S-304-CCT, available at electronic distributors like Mouser and DigiKey. A service manual for the BC-III can be found at http://groups.yahoo.com/group/awh2/files/ after you join the Yahoo group AWH2. Pin connections for the power cord are shown in the schematic. You can buy a ready made power cord at http://www.kenselectronics.com/lists/pwrcord.htm. Scroll down to the bottom of the page to find the old scanner power cord CJ-4P-AC.

I would have pushed to have the cop charged with impersonating an amateur radio operator and for transmitting on the ham bands without a license

Hello-

My brother-in-law is a police officer in a close by neighboring city. I'd like to purchase a scanner I can use to monitor his communications while he's at work so I know what's going with him and in my city. What's a good scanner for me to buy? I'd primarily use it while at home. I guess portability might be useful at some point so if you could recommend a stationary as well as a mobile unit, that would be great.

Thanks,
Clocker

Pro-95 works great for most. If you list what city you are trying to listen
to, someone can probably tell you what system they use.
Mine works great inside as well as out, just use rechargeable batteries,
as it goes through them fast.

Ah, ok... NOW I understand. Never heard of the dude before this. Not sure that equates exactly to Nazi style, but then I'm damned sure he isn't alone either. But I don't know that that matters much now, since cells are going Digital anyway and most scanners won't pick it up anyway. IMOHO, Cell listening sucks. You don't know anyone you're listening to for the most part or for what they're referring to, you're not allowed to divulge the information even if they were plotting a murder. The only thing you could hope for would be to get a few numbers or addresses of women or personal info which you shouldn't have anyway. Not sure life is worth wasting for that.

Source record: 18441

I am Not a regular poster to this news group...but I wanted to share something with this group.

A few years back, I picked up a "Zapper" from Rainbow Electronics. Was the best little box I have ever owned..until I loaned it out and never saw it again.

Since then I have been trying to find another one. I e-mailed Rainbow asking them if they would sell me one. Since the FXX asked them to take it off the market, they did and told me that they were no longer available....bummer.

When I got my zapper...I recall that was included was a universal remote control Garage door opener that would scan frequency's then open up doors without using the other persons remote. I recently found that document...I think I put it someplace....I'll have to try to dig it out.

I also recall getting a small booklet on how to use the zapper...and of course....the "Trolling for Tail-Lights" game. I also could have SWORN the specs of the zapper were also included with it.

Well...I just moved into my own place (no more renting) and unpacked all my boxes.....I was AMAZED to find the ORIGINAL specs for the Zapper. Really a simple design.

I am trying to find a place that will produce the PCB. I'll also will find a source that will supply all the electronics. Just have to find a place that can supply the right sized box for me to provide kits for every-one else.

Can anyone recommend a site that can provide these small boxes with a push-button??

Since the FCC has NO say in Canada, where I am...I can provide these kits. Will just take a bit of time to get the PCB's made. Any suggestion where I should look to find someone to make a small run??

Thanks All.....

Leaky microwave ovens will do that a LOT. Doesnt take much of a leak from a
700-1000 Watt cavity power osc to swap the router or bridge. They sit at
2.450Ghz...give or take 100MHZ! They move around with voltage and most of
all temperature variations...good luck in the hunt.

I'd like to purchase an AOR 8200 while I am in Japan. I've looked at the scanner, and everything is in English, including the manual. However, the presets have Japanese characters. I didn't have time to review the manual to see if I can adjust the characters to english text, although the radio does allow input of "normal" letters. Does anyone have the for sure answer on this?

Thanks in advance

http://www.police-scanner.info/index.htm

The above makes a good place to start to find out what kind of service is in the cities you are after, assuming no one here helps. I used this site to get the trunking to work here, as we are switching over. If you get the 95, the manual can be hard to understand. I was having a hell of a time with mine, no one was either willing or able to help. I finally figured it out after much frustration <G>.
Before you buy one though make sure what kind of service is in the cities you wish to listen to.

1889. Uniden BC296D Digital Scanner (* For Sale *)

Newsgroup: rec.radio.scanner
Date: 2004-09-07 19:58:58 UTC
From: backyardastronomer@hotmail.com
Message-ID: <21061e52.0409071158.15d94186@posting.google.com>
Source record: 18354

I am selling my BC296D. It is only 5 months old and has hardly been used at all, which is why I am selling it, so it is in nearly new condition. I am including everything that came with it, original box, docs, warrenty card, accessories, plus I have some Radio Shack antennas to go along with it as well, the 800MHz (20-283), wide band moble mag mount (20-032), and the deluxe rubber duck replacement (20-034).

If you have been interested in getting on of these fine scanners, this is a chance to get one and save a few bucks.

Please email me off-line if you are interested or have any questions.

Thanks,
Doug Matulis

Source record: 18355

The PRO96 is the only non-Uniden APCO 25 capable scanner available today. It is actually made by GRE, not Uiden and has such GRE trademarks as channels in banks starting at 0 instead of 1 and with instant DPL or PL decoding (vs. PL searching like Uniden).

AOR has an APCO 25 decoder that works with a high-end receiver (that has an IF output). but you are talking big dollars vs. the $500 for Uniden or RS scanners.

1892. UBC3300XLT & Data

Newsgroup: rec.radio.scanner
Date: 2004-09-07 20:57:57 UTC
From: Reink van Dijk <reink.van.dijk@nospam.com>
Message-ID: <413e2094$0$135$e4fe514c@dreader9.news.xs4all.nl>
Source record: 18357

I've got an Uniden Bearcat 3300XLT, whicht is equipped with a socked for a digital card. I's like to connect the reciever to my computer to decode pocsag / ermes / acars signals. The best way to do this is by connecting an interface to an unfiltered audio signal from the reciever. (Discriminator output) As I was thinking a digital interface card also needs such an audio connection. So I thougt it's possible to create an interface card fo the 250D / 3300XLT which has an unfiltered audio-output or a RS-232/Bluetooth output with a 4-FSK circuit embedded..

Does anyone have the exact dimensions of the apco-25 card and knows a little about the digital interface in the scanner, about the pinout for instance.. Maybe it's possible to create a custom card for the scanner and have all avantages of a discriminator output without having problems with the warranty.

So you've been talked out of it, but don't feel like sharing
what you see as its shortcomings.

You really don't want to help in the selection, do you?

So buy a PRO-1 -- you'll love it.

1916. Realist Pro-46 .. Trash or Treasure?

Newsgroup: rec.radio.scanner
Date: 2004-09-09 01:16:29 UTC
From: Diane Vee <remove-trashling@hotmail.com>
Message-ID: <j4O%c.114289$%n4.73696@bignews6.bellsouth.net>
Source record: 18381

I moved about 3 years ago and in my move I somehow misplace my Realistic Pro 46 Scanner. I was SO SURE that someone helping me move took it .. and I hated thinking that. But this weekend we [Volusia County Florida] got pounded my Hurricane Francis and yesterday - being it was too hot with no airconditioning to stay inside - I took on the project of cleaning out the garage. Figured the trash guys will be here today and they will be expecting LOTS and LOTS of trash. There in the garage in a drawer in a desk that I was trashing, I found my scanner.

Meanwhile, the area I moved to requires a scanner with trunking, so I bought one .. the Realistic Pro 46 didn't have trunking .. but ALL freq were wide open. So I brought the scanner inside .. turned it on .. nothing .. Of course nothing .. the batteries probably died a few years ago .. so I got some double a's .. put them in .. NOTHING .. plugged it in the wall .. NOTHING .. Whether I am using the hole for charging or just a/c .. NOTHING ..

Question is .. Do I put it out in the front yard with the desk I found it in ??? Or is there some hope of salvaging this scanner. Thanks ..

Try doing a hard reset first, worth a try. If you don't know how, you can locate the manual on the Radio Shack website.

Clocker,
I'm in Sterling Heights too. The following is the best resource
I've found for scanner frequencies and related stories.

http://www.bouwkamp.net/miscanner/#welcome

For this area, most municipalities are still on analog systems. The
only exceptions (that I'm aware of) are the MI State Police and Shelby
Township, who both use the MSP's digital system. You would need an
APCO 25 capable receiver to pick these up. Macomb County is
rumored/proposing to go digital by 2006, as is Wayne county sheriff.
You may need to consider a digital capable scanner.

Currently, macomb county sheriff is analog and provides law
enforcement for all the small townships (Washington, Ray, Macomb,
Richmond, etc...) Sterling Heights is still analog too. Just 3 main
frequencies and you've you've got SH PD and fire covered. Warren is
using a motorola trunked system (not sure what type) so a trunking
scanner would be useful for Warren. I can follow it pretty well on my
non-trunking PRO-51, since it is still an analog 800 Mhz system,
albeit trunked.

If you want to be mobile (ie. scanner in your car) note that it is
illegal to carry a scanner in your car, in Michigan, UNLESS you are
licensed amateur (HAM) or have a permit from the MSP. The permit is
free and you merely have to apply for it with this form.

http://www.michigan.gov/documents/com-022_8561_7.pdf

Check out the website. It has a lot of good information to consider
when choosing a scanner.

Hope this helps.
Spaz

Yep, nothing is ever perfect. It seems like the more stuff you can
change the worse it is at actual scanning speed/ease of use though.

Is there any analysis of this antenna on the web that I might look at?

I have one of these, and while I'm not expert, it does a wonderful job for me. I've never used a discone, so I have no way to compare the two... However, you can buy this antenna from other sources for HALF (or a little more than half) the price they want at the site that was originally linked to...

Too bad the ST-2 omits the milair freqs :~(I almost ordered one till I
read a DETAILED frequency coverage (30-50, 148-174, 440-470, 470-512,
800-912 MHz) Most stores list it as 30-1300 which isn't quite the same...

Not quite light years ahead of a discone. Last year I put up a discone
on one side of my house and a ST 2 on the other side, fed them both with
RG 6U double shielded. Had them feeding a Yaesu VR 5000 alternately.
The discone was the one that had the vertical element on top.
On 30-50 I could tell no difference between the 2. But I could use
the discone on 6 meter fm with a 1.9-1 swr. on 148-170 they appeared
to be the same. On some freqs the ST 2 was a tad, and I mean a tad
better. ON other signals in VHF (i.e.144mhz ssb amateur) the discone
picked up distant ssb chatter while the ST 2 picked up nothing. On the
discone I can use on 2 mtr. fm with almost a flat swr. On 440-470 they
apeared to be the same for all intent. Although I can use the discone on
440 fm with a 1.5-1 or so swr. On the 470-512 area there is nothing to
listen to around here so thats a wash. But on 800-912mhz the discone
worked quite well and is somewhat resonant there, while the ST 2
seemed to be about deaf in this area. If you live in an area that gets
freezing rain and wind, even the new improved ST 2 will not last. Its
too fragile. I have never had a discone come down. After my tests I took
down the ST 2 and sold it, and still have up the discone. There is no
substitute for being resonant at various points on a freq plot. The ST 2
basically fakes the radio as far as impededance with the 300 ohm
transformer. It hardly blows the discone out of the water, like I hear so
often. Advertising hype.

1935. Unknown trunk control channels

Newsgroup: rec.radio.scanner
Date: 2004-09-10 00:56:35 UTC
From: Tempest <tempest@HEHERemoveMEmidsouth.rr.com>
Message-ID: <5tu1k011hp92ado24kj57668762siknbnc@4ax.com>
Source record: 18550

hello all.

I'm pretty new to this newsgroup but I've been casually using scanners for many years. I recently obtained a BC895XLT and I like it a lot.

Here's my question.

While searching, I've found some Motorola type II control channels.. I inputted them into the scanner but they're pretty useless without the rest of the frequencies that make-up that system.

Is there any hard-and-fast way of finding those frequencies? Also, I've scoured the net to no avail.

I am in the Memphis, TN area and the control channel frequencies in question are:

856.8625
855.5625

I noticed that all the trunked systems I can scan seem to follow a convention, where the control channel is the "last" in the chain, along a sequential list of frequencies... for example, 85x.2125 .. X can be 5 - 9, and then 860.2125 might be the control channel for that. So, I tried blindly entering frequencies like that and I managed to partially clear-up this mystery with another system.. but this method hasn't worked with these two.

Does anyone have any suggestions or information? My aging scanner is getting left out in the cold more and more as the older trunked systems it can monitor are replaced with ones it can't, so I would really love to monitor every possible system out there in the short time I have left! :)

Thanks in advance for any help.

Kevin

I don't know much about the "B" word scanners. I am a Realistic fan to the bone. Realistic's Pro-93,94,95,96 models require that you only input the control channels (oh yes, you must also input the fleet map) and operate in the 'open' mode to get all talkgroups you need.

Depends on how it does the reset. Many radios have a key combination that you push while turning on the power, which forces the CPU to reinitialize itself, and has been known to bring "dead" radios back to life. Of course, in this case it appears that you didn't have any power getting to the radio, so a reset wouldn't have had any effect. Should have mentioned that as your obvious first check, but it slipped my mind (bad clutch!). Glad you got it working.

However it is half the price and includes the feed line and shipping.
It seems by the reports for monitoring the
basics its a appropriate antenna

According to the FCC Search page at

http://wireless2.fcc.gov/UlsApp/UlsSearch/searchAdvanced.jsp

both freqs are Fed Ex, which has a huge operation in Memphis.

Current Uniden and RS trunktrackers are capable of following most
trunked systems on 800 MHz. with only the data channel known, the voice
channels will be deciphered by the radio.

You can also use older non trunking scanners with a program called
Trunker, this deciphers the control channel and can even send a second
scanner to the voice channel. This does require a discriminator tap on
the "Data" radio and a computer control feature on the "Voice" radio.

It's just a heavy duty version of a Scantenna, AKA Monitenna, that RS
and I think it was Channel Master sold for years. I have two of them in
the box ready to go. The original is a flimsy antenna that works great.
They just don't hold up in the winter at all. I had a discone on my
tower until recently when the standoff broke in a storm. The
Scantenna/Monitenna in my attic was better on every freq, and it was 30
feet lower. A ground plane made with an SO-239 connector and some coat
hangers will blow a discone away. A total waste of money, unless you
want it as a back up antenna to transmit on....

>
>
> Jeff
>
>
>

I havent seen the heavier duty one in person, so I can't say for sure
how strong it is, but a discone really truly blows as an antenna. A

ringo ranger 2 works pretty well, better than any of the discones I have had on most freqs. I wonder if the Yaesu was hearing better on the discone because it was desensitizing. I had one here for a while, and it was a disaster, intermod and hash all over, and so I sold it to a friend who lives 20 miles from any really big town. Works good out there..

Right now I have two Scantennas in the attic, along with a discone and a home brew ground plane cut for 161 Mhz (trains), The discone is in the "sweet spot" in the attic (it was there first), and until I bought the first Scantenna, I thought it was ok. I even replaced the original coax on the discone with 9913 and it was a tiny bit better on 800, but wasn't anywhere else. I have the discone connected to my BC9000, as it's better on that antenna, since it seems most prone to losing it's cool due to a nearby TV station's huge signal. The Pro 2005 and 2006 on the scantennas will both easily beat the 9000 in every way but scan speed, on any antenna.

If I had my choice as one single antenna to use, I would probably pick the home built ground plane (I can build one that will last forever), with the ringo a close second. The scantenna's next only due to it's fragility. I may build a HD one myself one of these days..

As far as impedance goes, it's pretty meaingless for receivers, loss is much more of a problem.

I need to find a climber to change the coax on my ringo, and put up another discone as a backup to it, for 2M/440. I don't want to get ripped off for 300 bucks like I did 10 years ago, 25 of it was for coming over the border into my town. That 150 yards cost 4 times as much as the ground plane I made the day before cost me!

I suggest you go back and study some rf transmission basics.
Impedance is important on recieve if you want to get maximum signal
transfer. In an impedance matched circuit you will get maximum
flow of rf, than in a non resonant circuit. This applies to recieve as
well as transmit. Why do you think they use that little 1.95$ 300ohm
to 50ohm transformer on the scantenna? It isnt there for looks. And no
my VR 5k wasnt suffering from intermod or overload, had an AM
filter, an FM filter, and a paging freq. filter on it and it works quite
well. If you build your own ground plane, I bet you will make the
elements to come out to 1/4 wave on the freq. you want it to work
best on wont you? Why? because a 1/4 wave is a 52 ohm load at
the resonant frequency. Thats what a discone does, it happens to be
a 1/4 wave on a lot of different frequencies, thats why you can xmit
on it. Scantennas work, just not well enough for me to have one up
and with the 1st freezing rain and wind that comes along it ends up
bent up like a pretzel. The only band where it outperformed the discone
was in the 152-155 band where the LEO's use in different counties.

I checked another source

http://www.radioreference.com

Did not give me much there. I do confirm its a FedEx freq so we need find
the rest of them in the TRS then from there try and find the talk groups.

LOL, whatever you say...calm down.

If I had to throw all those filters on the Yaesu, I would have just bought an ICOM R8500 in the first place and it would have made life easier, or kept my 7100, since I didn't need another SW receiver.

You do realize that a scanner doesn't want 50/52 ohms at most of it's freq coverage, dont you? It's kind of hit and miss at best. I know what the transformer is for. I'm just posting that in my almost 40 years of VHF and up monitoring, the scantenna, fragile as it was/is (I don't have a HD version to check out)is vastly, not just a little bit superior to a discone.

Let them buy discones if they want!! I don't own Channel Master, or whoever makes it these days...

I guess I've have different experiences than you.

Is it possible that there is a strong signal source close to you that
was desensing your receiver when using the discone and you've created a
"high pass" filter with your tuned 1/4 wave?

Hmm, weird. With my 895XLT, if I input the control freq and begin
searching it, I never see any activity. I was under the impression
that allthe various frequencies on the system have to be manually
loaded.

Anyway, I appreciate the valuable information, all!

The BC895 is an older model, it does not have Control Channel Only
trunktracking. The BC780, 785, 796, 250 and 296 all do, as does the
PRO96.

On non-control channel only radios (such as your BC895) you do need to
enter all the system freqs.

Look up the call sign on the FCC web page to get the rest of the system
freqs. They do not need be in any particular order. Ignore anything
below 851 MHz., as these are mobile inputs.

No offense to the author of Win95/96 but I want to do it and make a free
program. I think $30 is a little steep for something that honestly has
only limited use. Once your scanner is programmed to your liking I find
there is little reason to reprogram it very regularly so Win96 would
just sit there. I mostly want to crack the communication as an exercise
and to make a program for my HP48 calculator but a free PC program would

be a nice additional side effect. I have spent some time pouring through dump files (binary and hex) and am making a little progress but so far I haven't determined the method to the madness. Of course when I asked RS tech support I got their canned email response about hoping to serve me in the future and a statement simply that the protocol is not available. Go figure. So, if anyone could help me figure out the command codes etc I would be happy to take a crack at something for free.

Again, I mean no offense to the author of Win96. It is great software and he deserves compensation for his efforts. I just want to offer a free version for the poor folks.

Cheers

You are of course welcome to do so... But pleading poverty after
spending a couple of hundred bucks on a radio seems a bit... off...

Try putting your scanner in the control channel only mode. Then the
scanner will find the missing Frequs.

A ground plane antenna, though, will limit the useful range of frequencies, won't it? I agree that it could outperform a discone at (and around) its resonant frequency, but for wideband scanning purposes, how could it outperform an antenna better optimized for wideband use like a discone? Like Donald K, I have had very good experiences with a discone. It even worked well for HF listening with compact wideband receivers that overload easily with wire antennas.

On the other hand, if one needs a band-specific antenna, a ground plane would be easier and certainly cheaper.

Good point. I didn't mean poverty stricken really. What I am saying is
that for those who saved their lunch money up to buy a scanner or who
were given permission from the spouse to make the purchase, it is an
additional blow to have to spend $30 for some software only used
occassionally. I don't think it is necessary. I think there should be
free software for the Pro96 owners. I like the idea of free software
when possible but I understand and respect non-free as well.

Thanks for your input.

For Sale!! ,

A professionally kept and maintained Realistic PRO 2006, cell modified scanner. Kept in a clean and smoke free environment. Comes complete with owner's manual and all related documentation, antenna, and factory shipping box. Manufacture date code of 1A3, Serial number 022053. This was one of Radio Shacks best scanners manufactured by GRE. Covers 25 MHz thru 1300 MHz continuously, bright electroluminescent back light, scans in frequency steps of 5, 12.5 and 50 KHz, Bands AM, MBFM, (Narrow FM) and WBFM (Wide FM), triple up conversion. Asking $ 200.00 U.S. OBO, plus shipping in CONUS. Postal money order or Paypal accepted. If interested please E-mail me at droth@cwnet.com Thank you for your time.

Hello fellow amateurs.

I've had my FT-847 for about 4 years, used it very lightly.

Recently I've experienced very strange audio reception. When I listen to some VHF repeaters (after TXing) I hear strong and very annoying "scrambled eggs" or " popcorn" sound. It's most usually on the repeaters I receive lower then S-5. This is very elusive and happens rarely, and it's always unpredictable when it will kick in. When I listen to the same freq. on a scanner, the audio is clear and hams I spoke w/ on the repeater don't experience this sound. This narrows it down to the reception inside my radio.

Any help concerning this would be greatly appreciated.

73's.
Phil

But if you buy it for Canada well there is no laws saying you can't listen too it here, but trust me on this, after listening to about three hours of just dribble its not worth anything, mostly its just blah blah blah. I just delte those frequncies when they come up anymore, not worth the time, just like listening too taxi's same shit different pile.

This brings up an interesting point. What do you find INTERETSTING to monitor? I'm finding the usual "public service" bands less than exciting except when there's a local fire or a surveillance going on (then it's really funny), occasionally the marine bands while at a beach. The local Yacht Club vs the Coastguard: comms discipline vs drunken boaters.

The "personal communications" frequencies (frs,ham,cb) are usually just plain boring. There's always the local McDs, but how many "you want fries with that" can one listen to? The voice pagers are interesting for about 30 seconds, but again, how many "Dr. Foosball, please call the hospital about patient Gremlin" messages can one hear before ennui sets in.

I'm not a NASCAR fan, although I see where monitoring those transmissions could be interesting. Likewise, maybe at a baseball game.

So what do you all listen to? Right now, the local EDACS-II is going for background noise in my place.

By the way: I note that the PRO-94 is on sale right for about $119, in case anyone's listening. I set up a couple of banks for my local RS's display model just to try out the programming. Easy, but no digital link so far as I can see.

Also: if anyone could point me to a USB-interface/sofware for any consumer scanners, I'd appreciate the information.

You misunderstand a motivation for obtaining a non-USA
version IC-R5.

The problem with the USA version IC-R5 (and IC-R20) is
that ICOM deleted more than just the cellular
phone frequencies. They cut important frequencies which are used by
police, fire, and other agencies in the United States.

The USA version IC-R5 will not receive
822 - 824, 849 - 851, 867 - 870, and 894 - 896 MHz

Frequencies in the 867 - 868 MHz
range (and 45 MHz below) are used by 3 local towns
which I monitor but the USA version IC-R5 and IC-R20 omit those segments.

1977. Resurrecting this Pro-2021

Newsgroup: rec.radio.scanner
Date: 2004-09-13 04:58:15 UTC
From: Tempest <tempest@HEHERemoveMEmidsouth.rr.com>
Message-ID: <nk9ak050i7a9ti4ngj5jp3g57h76ide93s@4ax.com>
Source record: 18592

Hello all.

Recently I was helping out at my office clearing out a storage room, and I came across an old PRO-2021 scanner. It had about an inch of dust on it and I figure it had been stashed there for quite some time.

I took it home and cleaned it up. The thing reeks bad of cirgarette smoke, and I cleared-off years of nicotine and dirt. Apparently. that scanner was an integral part of the company back in the day and it was in the same room with heavy smokers for quite a while.

Looking inside, it appears to have a discriminator tap mod, and the cellular band was restored.

I plugged it in and it works, but the display is DIM (no suprise).

But I noticed that it just doesn't seem to pick up much of anything well at all. Sure, it picks-up that NOAA weather radio frequency no problem -- nice and clearly..

But I haven't gotten it to pick up a single frequency anywhere near the 800 - 900 Mhz range. Maybe the occasional freq. in the 400Mhz range, etc.. but it just seems 'weak', if ya know what I mean.

This old stashed scanner didn't have the stock whip antenna, so I bought a Motorola-to-BNC adapter and tried a couple fo different rubber-duckie antennas and whatever else I have, and it just doesn't seem to really pick up much at all.

Is this some kind of known problem? An aged piece of electronics, way beyond its time, etc.? Is something else wrong, maybe something relatively easy to fix?

I'd really like to get it working again, even though it's pretty dated as far as functionality goes..

Thanks in advance for any input.

Kevin

A Pro-2021 will NOT receive 800 MHz freqs, at all, period! I own myself, I've performed the "mod", and all it does is allow the display of 800 MHz freqs. That's because the CPU could also be used in a scanner that would actually receive 800 MHz freqs. However, the entire RF section needed to actually receive the 800 MHz band is simply not there.

The 2021 is a bit long in the tooth, slow scan/search speeds and an upper limit of 512 MHz, but it's a good secondary receiver for VHF and UHF freqs if they are active in your area. But 800 MHz? Forget about it, unless you buy a downconverter (which are no longer made).

Probably would be, but why buy Icom? The PCR1000 is deaf and has very poor software control and support - I bought onebased on the glowing reports about it. Still have it, but use it only for local high powered stations - use my winradio for other freqs that actually require a little bit of sensitivity.
I am not sure of the price differences now, but when I bought my PCR1000 and my Winradio (1500E), the winradio was actually cheaper, had (and still does) better performance, and the software support is miles ahead of Icom. Have a think about going Winradio - better radio and at last look, better priced.

PCR-1000 deaf? You must have gotten a bad one. Being as I also own a R-75, FRG8800, Sat800, VR-5000, and many other "lesser" radios, I believe I have an idea of what a "good" radio is capable of. A Winradio for less than $400? I only paid $359 for my PCR a couple months ago. Incidentally, Talk PCR is an XLNT software package for the 1000. Best of all, it's free!

Having compared both, even if the 1500E was cheaper [which I've never seen to be
the case], I'd still take the 1000 any day.

1989. sbs(Shane):Icom IC R5 Scanner

Newsgroup: rec.radio.scanner
Date: 2004-09-14 05:53:17 UTC
From: Phil McBrayer <p.mcbrayer@insightbb.com>
Message-ID: <hHv1d.40718$MQ5.9145@attbi_s52>
Source record: 18304

Shane-KE6JZ,
I couldn't get your clovisb32@yahoo.com address to work so I'm hoping you see this message here. I'll take you up on your $100 + postage Icom IC-R5 that you offered Sept 5 here on rec.radio.scanner if you haven't sold it. I do have one request if you can do it; that you get it in the mail tomorrow (Tuesday) if possible. I will be visiting Wash DC Fri/Sat the 17/18th and want to look for a particular emitter while there. In fact, I'll give you a DC shipping address so it will have a couple of extra days to travel. I suppose the fastest way to pay you is via PayPal to your email address. I'll do that as soon as I hear back from you.

I live at 4401 Lancaster Ct.
Lexington, KY 40515
859-539-2201 or
859-539-0457 (both cells)

But ship to c/o Stefan Fernandez
3912 Chesterwood Dr
Silver Springs, MD 20906
301-460-3353

If shipment is delayed past Tue for whatever reason, we'll just revert to my home address and I'll have to catch the DC emitter some other time.

Let me know the status and your preference ASAP.

Phil McBrayer
p.mcbrayer@insightbb.com

Yep, Icom screwed up the R5 royally! I can't believe they even sell any US
versions. Everyone should know by now about the R5. The unblocked version is
really neat.

Everyone has their own opinions and you will always have some people swear black and blue that their favourite is the absolute best, but these have been my experiences resulting in my comments that the winradio shits on the icom. I own (still) the PCR1000 and the Winradio 1500E, and the PCR1000 comes out but rarely whereas the winradio is almost permanently connected to the computer and up and running.
I have not found that either of the computer controlled scanners are as good as say a 780XLT in terms of sensitivity, and the main drawback is that they must have a computer connected to them in order to operate. They both cover a pretty big chunk of the spectrum - the winradio up to about 1.5 GHz and the icom to about 1300 MHz I think (been quite a while since I used it last). As such, there are compromises made in the performance - if you got yourself a dedicated HF receiver and a dedicated VHF/UHF scanner, you will get better performance than the computer controlled scanners.
Another thing to check out is all the additional software that is available for the winradio. There are heaps of extra add ons for the winradio, andregular updates to the controlling software, whereas, in the time that I have owned the icom (7 years), there has been(although I haven't checked for a while) maybe one update and no extra little plugins. Have a look at the winradio homepage and you will see what I mean.(www.winradio.net)

1997. FS DX-394 General Coverage Receiver

Newsgroup: rec.radio.scanner
Date: 2004-09-14 20:48:24 UTC
From: Hammer <n1rsp@adelphia.net>
Message-ID: <w86dnTE2E7eJxNrcRVn-gA@adelphia.com>
Source record: 18312
Cross-posted to: alt.ham-radio.vhf-uhf,rec.radio.amateur.swap,rec.radio.scanner,rec.radio.swap

I have a nice receiver that coversLSB-USB-AM-CW.

RADIO SHACK DX-394 ALL MODE RECEIVER FROM 150khzTO 29.999mhz. THIS UNIT HAS SO239 AND HI Z ANTENNA CONNECTIONS ALSO HAS TAPE OUTPUT REAR JACK. 120VAC OR 12VDC. RADIO IS LIKE NEW, LOOKS NEW AND WORKING FINE. I DO HAVE THE OPERATING MANUAL BUT NO BOX.

The Radio Shack DX-394 Communications Receiver brings the voices of the world to you. In the 13 international short wave (SW) bands, you can hear news broadcasts and other programs from sources such as Radio Japan, the British Broadcasting Corporation, Radio Moscow and Radio Peking. You can get emergency information firsthand by listening to ham radio communications, including single sideband (SSB) voice transmissions and continuous wave (CW) Morse code transmissions. In the long wave (LW) band, you can hear ship-to-shore calls, other marine and aeronautical services, and sometimes even hurricane reports.You can tune to local broadcasts in the medium wave (MW) bands. (In the United States, we commonly call the MW band the AM band).

FEATURES:

PLL Synthesized Receiver - ensures accurate, stable tuning.

Large, Liquid Crystal Display - shows the time, band and frequency, signal strength, and other indicators.

Five Programmable Timers - let you store frequencies and on/off times for automatic listening pleasure.

Tape Out Jack - lets you connect an optional tape recorder.

Dual Time - includes a primary clock and a secondary clock, so you can set one to your local time, and the other to UTC (Coordinated Universal Time - also known as Greenwich Mean Time) or to the local time of a city in another time zone.

Search Tuning - scans up or down the band for the next available station.

Memory Tuning - stores up to 160 frequencies so you can quickly select your favorite stations.

Direct Access Tuning - tunes to the frequency you enter on the keypad.

Rotary Tuning Adjustment - lets you manually tun desired frequencies or channels.

Lock - prevents you from accidentally changing the band or frequency changing the clock settings, or turning on or off the timer.

MW Step Setting - lets you easily change the frequency step setting to match the MW (AM) broadcast frequencies used by many other countries.

RF Gain Control - sets the receiver's sensitivity.

Headphones Jack - lets you connnect a pair of headphones.

External Speaker Jack - lets you connect an external speaker.

Dual Conversion Upper - eliminates any interference from IF Superheterodyne (Intermediate Frequency) images, so you only hear the selected frequency.

Monitor Memory - lets you temporarily save a frequency.

Two Antenna Jacks - lets you use high- or low-impedance antenna connector.

Memory Backup - replacement-free rechargeable lithium battery keeps channels stored in memory for more than 1 month during a power loss.

Two Power Options - lets you power the receiver from standard AC power or from your vehicle's battery (with an optional DC cigarette lighterpower cable; does not come with it).

I AM ASKING $100.00 +SHIPPING.EMAIL ME IF INTERESTED.

Hello,
So when is someone coming out (Yaesu, Icom, Kenwood) with a dual band mobile tranceiver with a remote face that also scans trunked systems or even a hand held dual band trunk tracker?...nice
Man I would love one of those. I hope they are working on one now!
Has anyone heard of such a thing?
It sure would be nice as I wouldn't have to pack around 3 radios all the time! :-)

Some where some one has the protocol that the scanner needs to "see" to program its memory. Haven't tried in a week or so to search for the protocol just looking back every once in a while to see if someone had the code so I could right the program.

2007. Terk 55 Antenna Suitable for Scanning?

Newsgroup: rec.radio.scanner
Date: 2004-09-15 01:48:42 UTC
From: "A.Pismo Clam" <Alaininvc@'86DASPAMnetscape.net>
Message-ID: <1095212908.791800@news-1.nethere.net>
Source record: 18322

It has a bandwidth from 54-806 Megahertz. It is compact, can be used indoors or mounted outside. I am a tinkerer and was just wondering what some of you more savvy antenna Elmer's thought and how well you all think it might work...or not work.

Here are some of the specs:

receives UHF, VHF, and HDTV/SDTV signals
operational bandwidth: 54-806 MHz
broadband helical-coil single element
ultra-low-noise, impedance-matched amplifier
amplifier gain: 10 dB
output impedance: 75 ohms
rustproof, high-strength aluminum body, silicone-sealed for weather resistance
threaded F-connector for connection to RG6 cable (not included)
includes power injector, sill and mast mounting brackets, flat coax cable
46-5/8"W x 4"H x 3-3/4"D

Should I just stick with my Diamond Discone and forget tinkering with the Terk 55?

If you want more info on the antenna, here is the company's link:

http://www.terk.com/pdfs/tv55.pdf

Many thanks for taking the time to respond!

While I have never had my hands on the Winradio and there fore cannot
speak as to relative merits of the two, I do have a PCR-1000. While it is
true that ICOM's support for this receiver is shalle we say....
underwhelming, There is a hard disk full of sotware that is either
designed for it or works just fine with it. From alternative control
programs to trunk tracking software, to signal analysis software and
decoders for esoteric modes (you can even read pager data streams if you
wish). Software for the PCR-1000 is definitely NOT and issue.

Now if only I could find a good CHEAP Winradio 1550e for sale, i would be
happy to compare them and report :) LOL.

Hmmm, cheap winradio - well, not sure if you will see one in the secondhand market as few people will sell theirs. My winradio is about 6 or 7 years old now and still continues to be used, and about the only way I would sell it is if I could get near to replacement cost for a 1550E (unlikely at that).
I have noticed more software for the PCR1000 floating around the net, but in my opinion it isn't as useable or functionable as the winradio software which offers the same and more - there are trunking modes that only winradio is said to be able to track (sorry, not into that part of the hobby, so unable to provide more specific information).
According to the online shopping page, the 1550E is US$600 - not sure how that compares with the PCR1000 prices in the states, but at the time that I bought my winradio and PCR1000, the winradio was the cheaper of the two (OK, it was 6-7 years ago now). Have just had a look around the winradio site, and I reckon I would love to have one of the 3700E models that are the site,

but the price kind of puts me off it ($3000).

Matt

Yep, I sense a little bit of confusion entering the eqation here. The Discone is vertically polarised, whereas typically a dipole is horizontally polarised - particularly on the lower frequencies. For example on 80m (3.5 MHz), a dipole would typically be around 20 metres in length, which is not the easiest antenna to string upright, so most poeple will put them up horizontally. On the VHF and UHF bands, a dipole can be setup for either vertical or horizontal polarisation and as stated a couple of postings above, they are pretty easy to construct.

Or, there are fewer on the second hand market as there are far fewer sold in the
first place?

Or, as the price is higher, and there are rarely [never?] company sponsored
price incentives, they are less likely to wind up as an unwanted impulse
purchase?

The 'old' cordless frequencies are not 30 MHZ, they're in the 43-44 MHZ
range.

TV is horizontally polarized so the Terk is made to be mounted
horizontally. I suppose it could be made to mounted vertically, but like
any active antenna it will pick up noise, moreso than the Diamond
discone. I have experimented with active antennas for scanners in the
past and found them to be a poor choice. Dont even think of buying
one of those amps that you set by your scanner, it will pick up ALL the
noise of the antenna and coax, and generally be a pain to use. I say
stick with the Diamond and good low loss coax.

2018. PC Software for BC796D

Newsgroup: rec.radio.scanner
Date: 2004-09-15 23:54:03 UTC
From: sentient.being@butterfly.net
Message-ID: <11108994ROBOTLX@198.80.55.250>

Been out of the scanner market for about 5 years.
Used to run Trunker and a few other things.

I am now looking at the BC796D.

My town has a Motorola APCO25 digital trunk for Public Safety,
a conventional 800MHz Motorola trunk, a few LTR trunks for
business and some conventional VHF for a few remaining
services.

I used to own a BC895XLT and found PC software support was dismal.
Don't want to do that again.

Is there any good software for the 786D to load frequencies
and also to run under PC control via a USB/Serial converter?
Any good freeware?
Any good repository of easily-loadable frequency files for the 796D?

Replies in rec.radio.scanner please.

Believe it or not, there are other places in the world outside America. Barry is right, where we live, the old cordless phones operate around 30 MHz.

What I use on mine is a "radio shelf" type belt holder. They sell them for
Police to carry a radio, but they work fine for holding a scanner. Can get
them at places like Galls, or Quartermaster. The one I have (from Galls) has
snaps to take it on and off your belt. I originally bought it for my Pro-79,
but it's adjustable, so when I bought my 95 it fit it fine.

actually .....

the " next " generation of cordless phones will be UWB phones
operating in the 5 and 10 gig spectrum. (with uwb , frequency is
not specifically relevant , only the general band they operate on)
. the " past " generation of cordless phones , operating at 2.4 gig
hz , was discontinued by asian makers last year sometime (or
before for some) , to tool up for the " current " generation of 5
gig digital (all 5 gig phones are digital or spread spectrum)
cordless phone production. plain digital UWB transmissions are 10X
more secure than the best spread spectrum radios / phones.
consumer scanners could not detect spread spectrum phones and the
new UWB radios will be MUCH harder (10X) than spreaders to find.
no known available radio equipment (not even watkins johnson
or Racal) can detect UWB transmissions from a distance yet.
(even old watkins johnson could find spread spectrum carriers , tho
not decode the digital modulation codec)

tho the military has had UWB radios deployed in certain applications
for more than 10 years now , they have still NOT deployed
surveillance
equipment , in the field , which can detect UWB. rumors have it
that a few communications eavesdropping satellites already have
UWB capability ..... certain other people , in the know , say it's
only use / response to the " current " deployment of military UWB
radios and not general UWB eavesdropping equipment .
more remains to be seen about military UWB .... probably be years
before much gets leaked into the civilian sector about this state of
the art equipment.

type " UWB radios "
or
" UWB cordless phones " into Google
for more up to date info .....

OK, I think what Mark meant is that it is OK to intercept and listen to a "broadcast" made by anyone in the USA. You cannot reveal the information to others. Nothing can stop someone from intercepting a broadcast that is free for any randomly placed antenna to pick up. (Even scrambling and encryption cannot stop the interception. Decrypting the signal is another thing altogether.) Point to point /beamed RF would be something that you are not to intercept. In a point to point situation one would have to purposely place an antenna in the "beam" to pick up the RF. (Not fully, but for intents and purpose.) That could be considered tapping a line. There are definite laws against that.

2032. Handheld Scanner Question

Newsgroup: rec.radio.scanner
Date: 2004-09-16 17:11:59 UTC
From: Radio Man <puns@verizon.net>
Message-ID: <zPj2d.11315$iS2.9594@trnddc09>
Source record: 18346

I am looking for a new handheld scanner with the following options:
1. Frequency range: About 25mhz-1ghz (No shortwave or cellular)
2. AM/Wide-Narrow FM With Attenuator
3. 400 or more memories
4. 8 or more pairs of search frequencies
5. BNC Antenna Jack
6. Will Accept Standard AA Batteries

I am presently using a Pro-26 & Pro 94.
These two radios have reasonable attenuation against
outside interference & overloading.. Are there handheld scanners
available that will do the same as the above mentioned radios?
In the past i tried the small scanners that went from 100khz-1.3 ghz
& i would pick up two or three frequencise on one channel.

No no that's not it.

People will eventually get tired of cell phones and the ripoffs from the
celluar phone companies and go back to
the good old days before cellphones of using a pay phone or politely asking
"May I please use your phone to make a local call?"

Or just telling people "I will be at [name of destination]. If you need me
for something important, call me at
[telephone number]. I'll be there from [time of arrival] to [time of
departure]" Or, "this is [name of caller], at [location] calling.
Is there anything to be picked up between here and [next destination]?"

You now the way things used to work before cell phones came along.

That way people won't have to put up with the discourtesy of a friend
yakking on the phone during dinner at a restaurant.

Or some twit using his cellphone and not paying attention while driving.

Teenagers of course can bug Mom and Dad for a phone, but it will be one of
those cream colored desk phones with a handset. Tied into the home phone
number so that Mom or Dad can hear what Junior is talking about and to who.

Of course the teenager will see the phone and ask:

"What's that thing?" "It's called a telephone."
"Does it take a picture?" "No".
"Ring tones?" "You can beep off Mary Had a Little Lamb on it"
"Email?" "You use your computer for that"
"Call Waiting?" "Sure. Sit in the chair and wait for it to ring".

Scanners of course will become so sophisticated that Dad can listen in on
digital encrypted signals right out of the box,
eliminating "Sam The Scannerman" and his basement brewed scanner
modifications that the police know about, but
Sam doesn't know the police know.

I have the Pro 95 and have been very happy with it. Now, it does allow you to program with a computer.... Or you can do it manually, though I found this to be a pain, but if you prefer it to each his own. And the manual as stated in various post's does suck.

It really depends on where he's located.
In the city, where there's a lot of high power
RF floating around, the discone would be a
better choice. But in the countryside, away from
any high power paging systems and public
service transmitters, the Terk might be the best
choice. I used to use a mast mount TV amp when
I lived in a sparsely populated area and it worked
great. When I moved closer to the city, I got nothing
but desense and intermod. YMMV

ROTFL. My son's in high school, and most of his friends have a cell phone. He doesn't have one, and he hasn't asked me for one, because he knows what I will say. I remember when I was his age, my friends and I would serenade one another with "Mary Had a Little Lamb" and other songs via the touch-tone buttons. We thought we were so clever. :-)

The main thing that really irritates me about cell phones is this. When I'm on the highway and happen to glance over at an adjacent driver, I would conservatively estimate that 75% of the time, he/she is yakking on their cell phone when they are supposed to be driving. Just another way of taking people's attention off the road -- like we all need that.

I cannot even think about paying what these cell service providers ask for their monthly plans without laughing. I still use public payphones on very rare occasions, but that is generally only if I am delayed and need to call someone to let them know I will be late. Nevertheless, I won't completely lambast cell phone usage for everyone. I suppose if you travel a lot or own your own business and you're out on the road a lot, they are a godsend. But I rarely use my home phone! I just can't justify the extra expense of a cell phone.

Only the range of 5.8 is less than the range of 2.4 which itself was less than the range of 900 [not to mention the 46/49 I had that could work a block away...]

Is it just me or is this program completelly useless?

Maybe I'm doing something wrong, but I can't get it to select banks or the virtual scanner to update (the scanner in the program window)..

Other aspects of it work, so the "problem" isn't a matter of cabling or baud rate or whatever..

No alpha tagging (although it seems to have it in the program), channels won't stay loaded... instead, it wants to load each bank individually, every time you select it... and the loading is SLOW.

Yes I know.. get a real scanner and real software, you might say.. well, its not that big a deal.. just thought I'd see what's available for the BC895XLT and this junk was $29.90 via Paypal.

I guess getting money back is out of the question. I emailed the sales department at black bag software about it and, predictably, no reply.

I know thery're alive though -- they responded to my request to buy the software within a few hours. ;)

Oh well, live and learn.

hi Buzzygirl ....

I know what you mean , about people driving and yaking on
their cellfones. makes me crazy too. something else tho ....
cellfones are kinda handy if you have a health emergency ,
accident or similar. anyone can buy an inexpensive cellfone
from any garage sale for a couple of bucks and carry it in their
car to use if there is an emergency. (get it with the car cord for
this use , so you won't have to worry about batteries)
you usually can't make ordinary calls on it (tho there is an
exception in some parts of the country where you can use a
credit card on a roaming network setup) but " every " cellfone is
required to be usable for calling 911 in an emergency , even if it's
not activated. so in other words .. " any " working cellfone can be
used to make 911 calls if needed , at NO charge to the user.
having one for yourself (if you don't have regular cellular service)
and giving one to loved ones, that drive, is nice too. great for
that emergency call to 911 if the need arises and inexpensive too.
it's win - win deal ....

k.....................

Heck, anyone that read my review on Strong Signals would've known
better, hi. What a piece of xxxx.
There are many other packages that support the 895; are you
interested in using the 895 on trunking, conventional, what? I've
written numerous reviews on just this topic.
You can read the various reviews on the Strong Signals software page;
there's links to each review.

Oh well, I figured as much. It was only about 30 bucks, so I'll just chalk it up to "lesson learned" and move on. :)

I'm interested in all of it! Trunking, conventional, etc. That Winscan895 looks pretty neat but you have to use Scan Master's unsecure website and a credit card to order -- NO THANKS!

I just want a program that will do the following:

1. Load all channels from the radio

2. Quickly add/edit/delete channel info, like in Winscan895.

3. Allows use of alpha tags

4. Logs channel activity with timestamp.

5. Logs actual audio to hard drive via soundcard.

6. Tracks channel statistics over time (histograms, etc.)

7. Upload channels to radio

8. Use a virtual radio in the program window that is updated in real-time

9. Support trunking iwth alpha tags for talk groups, etc.

Pretty much, everything that Winscan program does. I looked at Scancat and it looks horrible... the interface is so frickin ugly I just can't get past that.

What else is there that's worth while?

Glad to know that the ScanPro software really is garbage and my own stupidity wasn't overly encroaching on my brain again. =)

2055. Regency HX1500 'FrErr'

Newsgroup: rec.radio.scanner
Date: 2004-09-18 00:24:24 UTC
From: dhmoone@aol.com
Message-ID: <20040917202424.08579.00000660@mb-m12.aol.com>
Source record: 18270

Scanner shows 'FrErr' on display - not low battery issue. You can enter a freq into a channel and it will recieve but will not scan or when you turn it off and back on it looses info and shows the 'FrErr'.
Have a working HX1500 and when I interchange the front cover with enclosed pcb it now works. Whats in the circuit board in the front cover that might cause this?
any ideas? Thanks, Dale dhmoone@aol.com

Yep, I know, good idea. My boyfriend just changed his cellphone service and has a cellphone that is no longer being used, so I might get that from him for that purpose.

Cross-posted to: alt.ham-radio.vhf-uhf,rec.radio.amateur.swap,rec.radio.scanner,rec.radio.swap

PERSON HAS BACKED OUT OF THIS DEAL SO I AM REPOSTING THIS RADIO.

I have a nice receiver that coversLSB-USB-AM-CW.

RADIO SHACK DX-394 ALL MODE RECEIVER FROM 150khzTO 29.999mhz. THIS UNIT HAS SO239 AND HI Z ANTENNA CONNECTIONS ALSO HAS TAPE OUTPUT REAR JACK. 120VAC OR 12VDC. RADIO IS LIKE NEW, LOOKS NEW AND WORKING FINE. I DO HAVE THE OPERATING MANUAL BUT NO BOX.

The Radio Shack DX-394 Communications Receiver brings the voices of the world to you. In the 13 international short wave (SW) bands, you can hear news broadcasts and other programs from sources such as Radio Japan, the British Broadcasting Corporation, Radio Moscow and Radio Peking. You can get emergency information firsthand by listening to ham radio communications, including single sideband (SSB) voice transmissions and continuous wave (CW) Morse code transmissions. In the long wave (LW) band, you can hear ship-to-shore calls, other marine and aeronautical services, and sometimes even hurricane reports.You can tune to local broadcasts in the medium wave (MW) bands. (In the United States, we commonly call the MW band the AM band).

FEATURES:

PLL Synthesized Receiver - ensures accurate, stable tuning.

Large, Liquid Crystal Display - shows the time, band and frequency, signal strength, and other indicators.

Five Programmable Timers - let you store frequencies and on/off times for automatic listening pleasure.

Tape Out Jack - lets you connect an optional tape recorder.

Dual Time - includes a primary clock and a secondary clock, so you can set one to your local time, and the other to UTC (Coordinated Universal Time - also known as Greenwich Mean Time) or to the local time of a city in another time zone.

Search Tuning - scans up or down the band for the next available station.

Memory Tuning - stores up to 160 frequencies so you can quickly select your favorite stations.

Direct Access Tuning - tunes to the frequency you enter on the keypad.

Rotary Tuning Adjustment - lets you manually tun desired frequencies or channels.

Lock - prevents you from accidentally changing the band or frequency changing the clock settings, or turning on or off the timer.

MW Step Setting - lets you easily change the frequency step setting to match the MW (AM) broadcast frequencies used by many other countries.

RF Gain Control - sets the receiver's sensitivity.

Headphones Jack - lets you connnect a pair of headphones.

External Speaker Jack - lets you connect an external speaker.

Dual Conversion Upper - eliminates any interference from IF Superheterodyne (Intermediate Frequency) images, so you only hear the selected frequency.

Monitor Memory - lets you temporarily save a frequency.

Two Antenna Jacks - lets you use high- or low-impedance antenna connector.

Memory Backup - replacement-free rechargeable lithium battery keeps channels stored in memory for more than 1 month during a power loss.

Two Power Options - lets you power the receiver from standard AC power or from your vehicle's battery (with an optional DC cigarette lighterpower cable; does not come with it).

I AM ASKING $125.00 WITH SHIPPING.EMAIL ME IF INTERESTED.

I was wondering if this scanner is being phased out? I know you have to buy the digital card seperatly and I think it would not do all the different trunking modes. But I think I say one retailer adversing it as a close out item.

Thanks Mike for the thoughts. No backup battery in unit. Manual says: all memory functions handled by an IC that includes a unique non volatile memory...maintains freqs for 10 yrs w/o battery.
Checked on the cb and yup! no battery.
Believe this was a common problem...maybe soemthing to do with voltage regulators?? But where and what component? Thanks, Dale

I have an Electra Bearcat BC-U UHF Sacnner. It scans 10 channels in the UHF range and has
2 crystals installed.

It's in fair condition. One of the scanner light caps is missing. The IF audio stages work; I don't know
about the RF stage.

It's your's for free if you pick it up or the price of shipping from zip 07737.

Probably, since the similar BC796 has replaced it. The BC796 includes
the card as standard, works with 9600 baud control channels as well as a
couple other improvements.

in my part of the country (farmland central california) analog
cellular service is still alive and kicking. (and necessary)
my tri-mode phone is most often in analog mode when I'm
away from town. (a lot) there are a lot of digital service gaps
here and zillions (it seems) of little independent
area service providers (especially in the foothills areas)
, which nearly always seem to cause my phone to go to
analog mode.
I have 2 old motorola 5 watt bag phones that I carry for emergencies
... one in the boat and one in the tow car too. both are only analog
and they still log onto the networks and I could use them for
emergency calls if I wanted. I suspect that we will eventually go
mostly or all digital some day .... but area coverage around here is
VERY difficult given the way the mountains and foothills
inter-react with RF transmissions. it looks like it will be some time
before digital is able to cover the whole area by itself. tri-mode
service is nearly mandatory , here, if one wants good coverage
away from towns and the freeways. if you only travel on the freeways
and " hang " around the mega metros , then digital is adequate for
most.

I'm not sure about Scanner Master not having a secure site; they
carry a THAWTE document, so I do believe that's a non issue.
Winscan 2.1 (Winscan895 morphed into this with the addition of
support for the 245) is about the best, and would do most of what you've
stated here. Radio Manager 2002 can also do much of this, but requires
buying RecAll Pro as a seperate add in for recording with date/time
stamp. I've never had much luck running this software; it constantly
misses lookups, no matter how much I tweak the timing options, and Trunk
Manager (which is required for some of the functions), is in my opinion,
highly overblown.
I agree with you re Scancat; the version I tried worked very well for
trunking, but didn't work at all when scanning conventionally.
Personally I don't like that software at all; the version I tried didn't
support Multi Tracking for the other Uniden scanners, and to me, that's
a serious problem.
By the way, don't even think of contacting Pozilla for tech support
on Winscan 2.1; they very rarely - if ever - respond to questions.
However, there are 2 895 related Yahoo groups on which you can post
questions, and you're likely to get answers:

Thanks for the info. I'll probably snag that Winscan somehow. The site doesn't seem secure at all, but oh well.

As an aside -- I sent an email to that ScanPro site asking for a refund and I didn't hear anything at all for a few days.

Low and behold, I checked my Paypal balance today and they refunded my money without even asking a single question!

I didn't like the software but I'm sure impressed with those guys.

I mainly lurk but I'm an avid radio nut and have a ham radio license. One thing that drives me nuts with cellphone usage is when somebody is in the store at the cash register to checkout and they keep on talking as they are checking out. I work at a photolab in a drugstore and I had to ask for the name of the customer to give him his film and he was talking on the cellphone all the time. Maybe I'm old fashioned but I think that is so rude. At least say to your friend on the phone, "hold on for a minute" or "I'll have to call you back." I admit there are times I wish cellphones were never invented, heck if I was like "Cancerman" from "The X-Files," if I had as much power as he, I'd figure a way to suppress cellphones. I know there is a good side to them as well and even have one myself so I guess some would say that is a bit hypocritical which I'll grant them that but even so, there are times I wish they were never invented. Oh well....

Mike, Not aware of any source for a circuit diagram. Since the scanner is a bit older, I'm afraid one might not be readily available. Did numerous web searches to no avail.
Anyone out there have a schematic?
Would a digital picture be of any assistance for you? There isn't much on the circuit board in question.
Thanks again Mike.

2080. FA: Uniden SC150B "Sport Cat"

Newsgroup: rec.radio.scanner
Date: 2004-09-20 02:37:20 UTC

http://cgi.ebay.com/ws/eBayISAPI.dll?ViewItem&item=5721659193

UNIDEN SC150B

POLICE SCANNER

You are bidding on a gently used Uniden Bearcat SC150B scanner. This unit will pick up the following frequencies:

a.. 29.0-29.7 Mhz
b.. 29.7-50.0 Mhz
c.. 50.0-54.0 Mhz
d.. 108-137 Mhz
e.. 137-144 Mhz
f.. 144-148 Mhz
g.. 148-174 Mhz
h.. 406-420 Mhz
i.. 420-450 Mhz
j.. 450-470 Mhz
k.. 470-512 Mhz
l.. 806-956 Mhz
You can listen to police, fire, ambulance, aircraft, phones, race teams, ham radio, weather stations, and much, much more.

Included in this auction is the scanner, antenna, battery pack, charger(aftermarket), and manual (hardcopy & .pdf file)

Scanner works perfectly and has no significant blemishes.

Please see all pictures for detail and feel free to ask any questions.

Have a look at my feedback and bid with confidence!

I will ship Worldwide.

I accept Paypal only for this auction.

Source record: 18295

>Or just telling people "I will be at [name of destination]. If you need me
>for something important, call me at
>[telephone number].

no they can't. That doesn't work anymore. The phone companies got wise to that long ago and changed the sysyem so that pay phones will no longer ring. They did that so that no one can do what you mentined like they used to do.

They did this to prevent the person at the pay phone from telling the other person they know to call them there, so that the person at the pay phone has to make the call and pay. (unless they call collect).

If you look closely, there is now signs on pay phones saying "no incoming calls".

And the pay phones actually do not ring anymore if someone does call them.

2082. Optoelectronics Cub handheld MiniCounter Freq Counter

Newsgroup: rec.radio.scanner

From: Alan Spicer <a_spicer@bellsouth.net>
Message-ID: <6gs3d.48107$zT6.10459@bignews5.bellsouth.net>
Source record: 18297

http://cgi.ebay.com/ws/eBayISAPI.dll?ViewItem&rd=1&item=3841194802&ssPageName=STRK:MESE:IT

For sale:

Very lightly used Optoelectronics Cub MiniCounter - Frequency Counter / Capture hand-held device.

This a cool tool for scanner monitoring fans that want to discover unknown frequency of an analog radio transmitter or repeater (business or public service system). Find out what channel (frequency) someone is operating on so that you can monitor them.

Also useful for Two-Way Radio professionals or Radio Amatuers (Ham Radio Operators), CB Radio users, and FRS - Family Radio Service users.

Unit has 1 year warranty ... and is only a few months old. Purchased from the factory here is local area: Fort Lauderdale, Florida.

I have found that my 95 seems to work fine indoors. When I have compared it to "desk top" scanners it seems to pick up just as well. Given that, I would always prefer a portable to a desk top. Why buy one you can't take with you if you wish? NiMh rechargeable batteries have gotten very cheap these days, and are well worth buying for these.
Now I am FAR from being any kind of expert on these. I only listen to the Police so there may be some advantage to the desk tops I don't know about, but for Police calls, I would not bother with a desk top now that I tried a hand held.

The Regency HX1500 scanners were **hugely** popular with railfans, aka
train enthusiasts. I never had an HX1500, but some fans still think it
works better in the 160-MHz range than any other scanner.

The first place I'd go to ask about one is the Railfan scanner
enthusiast Yahoo! group:
http://finance.groups.yahoo.com/group/RailScan/

And I'd give this guy a try:
http://www.alabamarailfan.com/scanner.php

One more:
http://eje.railfan.net/railradioonline/

Yaesu VR120(D).

I had a VR120 and it was wonderful (sorry I sold it to pay for other
things). The "D" is the same but with a built in charger. Take a peak at
ebay. I recommend the VR120 very highly.

Source record: 18158

Hey all,

Just kinda tossing this out there. I am currently using my old TV antenna for my SC150B and it works pretty well as far as I can tell...I can get most of the local cops pretty clear as far away as 50 miles or so....I have the amp/pre-amp hooked up with the FM trap set to "out"....

I guess my question is this: is there any advantage to purchasing and mounting a new discone style or beam style antenna? I will be upgrading to a PRO-95 shortly so that I can get the locally trunked cops too.

Any comments or suggestions appreciated.

Cheers!

R.

If you can, remove the mounting hardware and
re-install it so the antenna is oriented vertically.
Most public safety transmissions are vertically
polarized. Turn the FM trap ON to eliminate any
intermod that strong local FM stations might generate.

Just got out my Home-made MilSat Yagi since the Hurricane threat has lessened. First night while listening to the birds caught some forigin language conversaion between two mails, could have been spanish on 263.9250 MHz FM at about 2110 EDT. Could have been pirates using our birds againï¿½. If youï¿½re interested in catching some Military Satellite Traffic it seems as if 263.925 MHz FM has been popular for such traffic.

Monday 20 Sep 2004

Two long-absent visitors returned today:
FAB 65 is one of the Bolivian Air Force's transports that used to be a regular visitor. He usually stopped at Patrick before continuing to Opa Locka.
NASA 963, my favorite NASA T-38, is always a heartwarming visitor.
The Hurricane Hunters continue to fly all around us, heard here and on HF comms throughout the entire day (and even now as I type this at 4:29am Tuesday).

FAB 65: C-130, Bolivian Air Force
11:35am: Lands Patrick AFB
[133.75]

JOLLY 12: HH-60G, Pave Hawk Helo
12:00 noon: Hover checks.
[269.375]

MAULER 14: S-3B, Jacksonville NAS VS-32 "Maulers"
12:54pm: Area transition, northward; descends to Jacksonville.
[269.3, 273.55, 251.15, 351.8]

ROPER 91: C-130, Ft Worth NAS JRB, TX-ANG 136AW
1:00pm: Lands Patrick.
2:50pm: Departs to Ft Worth NAS.
[133.75, 383.0]

JOLLY 11: HH-60G, Pave Hawk Helo
1:01pm: Local work.
[269.375]

TEAL 99: WC-130, Keesler AFB 403W 53WRS "Hurricane Hunters"
1:05pm: Area transition.
7:04pm: Heard again.
[135.075]

PAT 258: US Army Priority Air Transport
1:27pm: Area transition.
[135.075, 134.8]

AIR TRANSPORT 300: DC-8 (USAF Contract Acft)
1:30pm: Departs Patrick to Antigua.
[133.75, 132.65, 132.15]

ROPER 94: C-130, Ft Worth NAS JRB, TX-ANG 136AW
2:20pm: Area transition.

KING 55: HC-130P #64-14855, Patrick AFB 920RQW 39RQS
7:00pm: Departs Patrick, then lands immediately, "Pilot ADI [attitude director indicator] frozen."
[133.75, 321.0]

NASA 963: T-38N #59-1603 (my favorite NASA T-38)
9:50pm: Lands NASA Space Shuttle Landing Facility.
[133.9, 125.075, 132.25, 124.8, 132.65, 128.55]

NASA 920: T-38N #66-8386, Johnson Space Ctr
10:47pm: Lands?/Departs? NASA Space Shuttle Landing Facility.

REACH 947Y
10:49pm: Area transition.
[119.825]

AL STERN Satellite Beach FL (28-11N 80-36W) monitoring
Patrick AFB (KCOF) NASA-KSC Shuttle Landing Fac (KX68)

For reference sake, it has nothing to do with 9/11. Not in Canadian RS's, at least.

The Canadian chain of Radio Shack stores has been getting out of the scanner business for years. Every now and then I try out of desperation to get something from them, and get absolutely no positive results. I can't even buy BNC antennae that some US folks have said are selling like hotcakes in the US stores.

Then again, it may be for the best that RS is leaving the scanner business. Back when the BC245 was just coming out, I stopped into one of the Calgary stores to see if they were going to get them. I was told "No, and you won't be able to monitor the systems here with them anyway."

Uh .. what? I have a BC235 on my belt which is receiving the Fire and EMS (analog) portions of the trunk already, genius..

"Well, you CAN monitor the trunk, but what you need to do is wire it up to a PCS phone. That way it will decode the digital signals, which are transmitted across PCS airwaves anyway, and you'll hear all the systems. We have a book here that tells you how to do that."

I just backed away and went on my merry way, hoping that stupidity
wasn't contagious...

2105. Re: PRO - 95 or PRO 2066?

Newsgroup: rec.radio.scanner
Date: 2004-09-22 04:40:36 UTC
From: Pilotbutteradio <pilotbutteradio@yahoo.com>
Message-ID: <4151023b_5@corp.newsgroups.com>
Source record: 18170

I own both of these units. The 95 is dual trunking, receives trunking and non trunking frequencies at the same time. It can be programmed via software on your computer (makes life much easier!) The 2066 is a trunking scanner but will not trunk and receive conventional frequencies simultaneously, and can not be programmed via your computer. The 95 has alpha tags and 500 channels, the 2066 does not have tags and is 150 channels.

That said, I have not done side by side tests for sensitivity on all bands but I can tell you that the 2066 is better in the 900 mhz band than either the 95 or 2053 (base version of the 93, 95). The 2066 also scans a bit faster. I run the 2066 on conventional frequencies here in the shack, while I scan trunks and conventional with the 780xlt. This way, I don't miss anything on the conventional side while the 780 is on a trunk. My 95 is usually used for portable operation only, or when I want to listen while in another room of the house. I think both are fine radios.
What radio you pick should be based on the way you intend to use it. If you want to listen to both trunked and conventional frequencies, would like alpha tags, and want to program via your computer, the 95 is your best bet. It will also cost you a few more dollars. Hope this helps. Enjoy,

Want Military HF, VHF, UHF, SatCom frequencies. Join the
MilAirCommsChat group.

Messages, questions and comments regarding all forms of Military
Communications are welcome here. This includes HF, VHF, UHF, SatCom,
anything Military related is considered on topic.

This is one of the fastest growing groups dedicated to monitoring
Military communications. Started about a year ago we have over 600
members and many posted messages and files. There are daily logs
being posted, answers to questions, and good conversation relating to
monitoring military communications. Unlike many military monitoring
groups whoï¿½s posting activity is declining the MilAirCommsChat group is
growing.

This group is for old timers and new comers to the hobby. I will not
tolerate anyone making rude comments towards newbies to our hobby. Just
remember ALL you were newbies at one time.

For more information on this group or to join you can go here:
http://groups.yahoo.com/group/MilAirCommsChat

To scribe you can simply send an email to:
MilAirCommsChat -subscribe@yahoogroups.com

Same things happened to me at a local RS in Toronto. (The store at Humbertown Plaza - Etobicoke) I will never buy anything 'high-end' at RS again after that little incident. Wire, 1/8" plugs/jacks batteries, okay - but nothing over ten bucks anymore. I've supported RS for over 30 years and have been handed this same garbage regarding scanners for the last two years. It's almost like they're trying to purposely loose the sale.

In Canada, go to Durham Radio or the other local pro radio shops. RS is a joke for scanners and related products. (Sadly)

2110. Re: Scanner Antenna - TV ant. seems to be OK...???

Newsgroup: rec.radio.scanner
Date: 2004-09-23 02:37:30 UTC
From: cobradude <tfleissner@comcast.net>
Message-ID: <RdydnX621I--q8_cRVn-hQ@comcast.com>
Source record: 18175

I would add , without knowing the feedline setup,
that TV antennas are generally 300ohm and need a balun to go to 75 ohm
coax...for VHF and UHF work, I would say buy the best low insertion loss
balun you can(not radio shack, search google for hi quality ones!), locate
the lowest NF, highest IP3 pre amp right next to the balun and then just
about any length/type of coax down to the scanner and you will hear a lot!

HOWEVER, your mileage may vary,
tom f

2111. FS: Uniden BC296D Scanner and Antennas

Newsgroup: rec.radio.scanner
Date: 2004-09-23 03:23:08 UTC
From: backyardastronomer@hotmail.com
Message-ID: <21061e52.0409221923.63cb8306@posting.google.com>
Source record: 18176

I am selling my BC296D. It is only 5 months old and has hardly been used at all, which is why I am selling it, so it is in like new condition. I am including everything that came with it, original box, docs, warranty card, accessories, plus I have some Radio Shack antennas to go along with it as well, the 800MHz (20-283), wide band moble mag mount (20-032), and the deluxe rubber duck replacement (20-034). New everything would cost $575, I am asking $450, you save $125. Satisfaction is guarranteed. If you have been interested in getting on of these fine scanners, this is a chance to get one and save a few bucks and pick up a couple of extra antennas.

Thanks,
Doug

2114. Online Scanner from country Australia

Newsgroup: rec.radio.scanner
Date: 2004-09-23 10:55:46 UTC
From: Mike <bah>
Message-ID: <4152abb0$0$24407$5a62ac22@per-qv1-newsreader-01.iinet.net.au>
Source record: 18179
Cross-posted to: alt.radio.scanner,alt.radio.scanner.uk,aus.radio.scanner,rec.radio.scanner

Hey people...

I just got my website up with a scanner feeding audio and a display from a country town in Australia.

http://southernscan.no-ip.com

Check it out and see how the emergency services do things out this way...

Mike

2115. LAST DAY! - FA SC150B Bearcat Scanner

Newsgroup: rec.radio.scanner
Date: 2004-09-23 11:51:21 UTC
From: WTP07 <WTP07rsb@yahoo.com>

Source record: 18180

http://cgi.ebay.com/ws/eBayISAPI.dll?ViewItem&item=5721659193

UNIDEN SC150B

POLICE SCANNER

You are bidding on a gently used Uniden Bearcat SC150B scanner. This unit
will pick up the following frequencies:

a.. 29.0-29.7 Mhz
b.. 29.7-50.0 Mhz
c.. 50.0-54.0 Mhz
d.. 108-137 Mhz
e.. 137-144 Mhz
f.. 144-148 Mhz
g.. 148-174 Mhz
h.. 406-420 Mhz
i.. 420-450 Mhz
j.. 450-470 Mhz
k.. 470-512 Mhz
l.. 806-956 Mhz
You can listen to police, fire, ambulance, aircraft, phones, race teams, ham
radio, weather stations, and much, much more.

Included in this auction is the scanner, antenna, battery pack,
charger(aftermarket), and manual (hardcopy & .pdf file)

Scanner works perfectly and has no significant blemishes.

Please see all pictures for detail and feel free to ask any questions.

Have a look at my feedback and bid with confidence!

I will ship Worldwide.

I accept Paypal only for this auction.

Hi,

Is there anywhere to buy Radio Shack items like a PRO-95 at a discounted price? there use to be Radio Shack dealers that sold below retail, at least computer. I did a 'Google' without any luck.

Thanks in advance,

John

have a question:
In the Past 4 years we have
A- Had the Highest sustained fuel prices in the past 100 years:

.Please tell me how the president had any thing to do with the price of
fuel

If you bother to read a news paper their are less refineries producing
gas than their were 10 years ago

why: all the EPS regulations make it to costly to build new plants

B- Worst Economy since the Great depression:

The Economy was on a down swing 6 - 9 months befor Bush took officce,
Uneployment now is lower than under Clition
C - Went from a Goverment surplus, to the largest deficit in history:

The last president cut a lot of spending from the military and others,
it was sad that they had to use parts from 1 plane to fix another because
they did not have the money for spare parts. Its cost money to replace these
items
D - Have been stuck in a war with Thousands of Americans Dead & wounded.

I agree Thousands of american have die so other can have freedom, thats
a small price to pay
E - Lost Respect & support of almost Every major ally, both their
Government & citezens.

I don't care where you go in the EU, we were never like because of all
our freedowms we were just tolerated
F - Rolled back & delayed laws that would have cleaned up lakes,

Since I am not sure what you are talking about I can not respond to this
item. But I will say things have gotten out of control with regulations to
the point where farmers have to be careful when they till their fields so
they don't raise to much dust, come on give me a break

I did notice you did not say a word about your taxes being lowered under
Bush giving you more money to spend or save, come on and get your head out
of the sand and pay attion to the news and more than you local or CNN

> A- Had the Highest sustained fuel prices in the past 100 years.

Yep, not enough refinery capacity to handle demand. And environmentalism
not allowing domestic drilling.

> B- Worst Economy since the Great depression

What numbers do you base this statement on? The economy is fine, thats why
Kerry is not talking about it anymore. I suspect you are parroting CNN, and
like the left, have no facts to base the lies upon.

> C - Went from a Goverment surplus, to the largest deficit in history.

In dollars yes. As a percentage of GDP no. If you make 50k per year and have
5k in debt, then your income goes up to 100k and your debt goes up to 10k,
you are more in debt....but your ability to pay the debt is keeping up with
it. Thats why the percent of GDP (Gross Domestic Product.... for the
parrots) is a much more realistic measure of the debt.

> D - Have been stuck in a war with Thousands of Americans Dead &
> wounded.

I would rather have the bombs going off against our brave and trained
military than in our cities filled with inocents.

> E - Lost Respect & support of almost Every major ally, both their
> Government & citezens.

They are either with us or against us. They made the wrong choice....and
just to preserve their wallets. It had nothing to do with anything but their
oil for food money.

> F - Rolled back & delayed laws that would have cleaned up lakes,
> rivers, bays & the Air.

Which lake? Which river? and What air? Be specific. Our lakes rivers and air
here in Central Oregon are beautiful and full of fish.

> -- The question is,
> Who the heck has been the President?? What is his name. I'd like to
> know.

George W. Bush. A leader with a spine. A man who does what he says and says what he thinks. Agree with him or not, he is a straight shooter. Oh wait....did I just reference firearms? Better take my keyboard away from me before I shoot someone.

> He had his chance, & blew it. If he were a CEO, he'd have been fired
> long ago...

If he were a CEO he would be getting a raise. What do you know about business? Nothing I am sure. Go back to your brainwashing on CNN.

I propose a new voter law: No one gets to vote unless they establish themselves as someone who checks the facts and is engaged in the political process on a regular basis. We have too many liberal media drones out there who have no clue what is happening in the world.

W-02

I don't know if anyone else sells the "Radio Shack" line, but the store it's self does of course put them on sale from time to time. When I bought my 95 it was on sale around $50.00 off or so I think. I have seen them in the flyers here on Sunday a few times. If you want one and are not in a hurry keep an eye on the Sunday ads.

Hey John,

In Canada, there is the clearance outlet in the Mississauga, but I don't think they carry much in the way of scanners anymore...

I don't know if the US version has clearance outlets, but I am betting they do...if you go into your local shack and ask, I am sure if they can tell you if they have a central clearing store for discontinued items.

Randy.

Source record: 18189

Hello,
I have a Pro-2053 and a Pro-95
I have the WIN95 software and cable for the 95 works great! but.....
What do I need to program my Pro-2053?

Can I use the same cable?

Is there free software available for the 2053?

Any help would be greatly appreiated
Please e-mail me at trd150@dccnet.com
Thank you
-Russ

Yep, the 2053 is the same inside as the PRO-93 handheld. They, along with the PRO-95 use the same cable. The Win93 software is from the same guy that does Win95. Happy scanning!

the radio is available on line for around $500
Antennas are nice, but $50 off for a used radio just won't cut it. New with
warranty is mucho better.

Ask the seller, they may be willing to ship it elsewhere, I often put US by default just so I don't get any surprises.

Another option is to find someone here to recieve it and ship it overseas to you.

Well, thank goodness that someone finally recognizes that there's
something wrong with the government, and is going to cast her vote for a
candidate whose primary objective is to reduce the size of the
government, thereby eliminating many of the problems.

As GDP goes up so does the government income from taxes. The debt has always
been measured in relation to GDP. It is the masses watching CNN that dont
know any better.
Please note, I am not in favor of more debt. I think our government spends
WAY too much money. But this is not an unmanageable situation, and certainly
not the "sky is falling" mentality that some propagate.
The way to generate more tax money is to stop the overegulation of
government to business. Oregon's state government is outright hostile to
business, and the Fed is more and more so all the time.

When have we had an attack on our homeland since Sept.11 ?
I get the liberal "word" every day. The fact that we have had no attacks
should tell you something. All of the suicide bombers are over there instead

of over here. Sticking our head in the sand wont make the bad guys go away.

The Willamette and Columbia were dirty long before President Bush. As a
matter of fact, when was the last time you could or would drink out of any
major river? What is the specific difference in the Willamette or Columbia
from 8 years ago? Who were the polluters, and tell me how the Bush
administration was directly responsible?
What happened to the vanishing Salmon population? In case you did'nt "get
the word" the rivers are full of them....and at record levels. By the way,
they are particularly good baked with crab meat on top!

Give me a documented example of a lie. Please do not bother parroting the
liberal media and don't tell me he lied about WMD's. EVERYONE thought Iraq
had them. Including John Kerry.
Unfortunately for both of our parties, the government is all about taking
care of the "buddies". On BOTH sides of the isle. I would love to see that

fixed. Primarily by getting rid of the whole lot of them, and starting over
with people who will actualy stand on principle rather than on their
wallets.
>

Already tried it,
159 results and not one of them shows an example, only links to programs
that can import and use them.

How's that?

Thanks anyway....

2141. Pro-94

Sorry, I'm not that familiar with UFDBF, so I wasn't quite sure what
you needed.

Good Luck in your search.

Spoken like a true brainless dumbocrat drone. I could really care less what France, Germany or Russia likes. They were in bed with Iraq raking in the dough on the UN's fraudulent Oil for Food program and didn't like the fact that was going to go away. Your precious Johnny boy wouldn't be able to decide what to do unless he looked at a new poll every day. I am glad we will have four more years of GW. and less dumbocrats all around since the Republicans will gain across the board and be able to implement many more of GW's policies. I can't wait for all you liberal scumbags to start comitting suicide.

They seem to be doing that right now with the 94. Last time I looked they
were selling it for about $100.00. It's a trunking scanner, but does not
have "Alpha tags" I think I was told. Don't know what that means.

Bruce,

Can you give me and idea what a used one would sell for. I am find
these to be different than what I sell my other hobby related toys
for. I sell my telescopes for 80-85% of what I paid for new. Guess
that doesn't work with scanners for whatever reason. Perhaps a better
price is in the $419-425 range. Does this seem reasonable, or do
radio hobbyists basically give their used, well in the case of my
scanner, hardly used equipment away?

I think I will offer it up at $420 OBO and see where that lands.

Thanks,
Doug

No, the 2052 and 2053 are quite different; the 2052 is kinda closer
to the BC895 than anything else. It can be computer controlled, while
the 2053 cannot. The only inexpensive software I know that does the job
is Scan Control. I'd stay away from the Winscan and Scan Pro offerings;
Pozilla's lack of customer support and the general overall performance
of some of those Scan Pro offerings is kinda, well, crummy. I'm not sure
about the Radio Commander 2052 product - I haven't heard that much pro
or con about it. You can find URLs for all of these products here:

http://www.strongsignals.net/access/content/software.html

There's a fairly interesting page on the 2052 here:

http://mirror.bachelorsgrove.com/pro2052/

Of course, if you're really interested, you should join the PRO2052
Yahoo group; I've no doubt you'd get an earful as to what folks are
using. You can find it here:

http://groups.yahoo.com/group/PRO-2052/

Excellent!

Thank you so much.

2166. FS : RELM HS 200 hand held scanner

Newsgroup: rec.radio.scanner
Date: 2004-09-25 03:39:58 UTC
From: Dan Conti <dconti@nj.rr.com>
Message-ID: <iM55d.1493$mH1.2443151@twister.nyc.rr.com>
Source record: 18131
Cross-posted to: alt.radio.scanner,rec.radio.scanner,rec.radio.swap

I am selling a RELM HS 200 hand held scanner. In excellent condition, in
the box with manual antenna, etc.
One of the best scanners of thus type ever made, no longer available.

$100.00 plus 8 bucks UPS ground shipping to 48 US states.

US Postal money order, PAYPAL, or personal check.
(Perosnal check will delay shipping until it clears).

eBay feedback under OFFDAN.

E-Mail ONLY if interested.

Dan

What's the best software for this situation - traveling from city to city, state to state, with a BC 780 and BC 245 w/laptop and I want to load the trunking/conventional frequencies for the city/state I am traveling to so that I can monitor traffic and public safety information, etc. Whats the most comprehensive CD/program for this?

Speaking of talking to yourself, you and zerobeat are the same person,
using the term person loosely.

AKC knows you talk to yourself all the time trying to figure out how
to stop our dissent. You cannot. You are powerless. Sux for you...but
anything about sucking makes you happy, I bet.

Well, if all you're interested in is programming the radios, there
are 3 fairly cheap (or free) packages that fit your needs;

- Scan Control (lite version)
- Control Freq Jr.
- Scancat Lite Plus

I think I'd go with the lite version of Scan Control; it has support
for most of the kinds of systems you might encounter. Control Freq Jr.
doesn't, and to me, at least, Scancat Lite Plus is too klunky to be
effective for more than an occasional reload.

You can find links to these packages and reviews here:

They won't even let you have the batteries connected. You must also remember that scanners are so poorly put together that they can really screw up the electronics in the aircraft just by turning it on. Don't take it in your carry on unless you want to be detained and treated like a terrorist.

I used to own a BC780XLT and before that a BC895XLT.

I moved to an area with mostly digital comms but now I've
moved back to Wichita, KS.

I'm looking into getting into scanning again and need advice
on which scanner to buy. Here are my needs

Able to scan a type II system.
Can load into memory about 20 talkgroups, a-la the 895.
Alpha tags are not needed.
Conventional scanning not needed.
High gain reciever not needed.
A handheld would be best.

I'm thinking BC235 off of ebay.

Anyone care to suggest a radio?

Ken

What a load of total crap!

Aircraft avionics are, for obvious reasons, made to be very safe. This includes a high degree of resistance to stray RF interference.

There are COUNTLESS devices on the ground that radiate FAR more RF interference into the sky than a handheld scanner would and yet we do not see planes falling out of the sky every time they get near a built-up area.

What a DOUBLE LOAD OF CRAP.

Hey dude, it isn't the adjacent channel interference that airlines are concerened with here, it is the stuff being radiated ON FREQUENCY, by poorly designed electronics. You can't filter ON FREQUENCY signals, or you raise the sensitivity threshold of the receiver. The only way to deal with ON FREQUENCY signals is to TURN THEM OFF.

Me who used to be a Federal Regulator, and deal with this stuff

Cute. Of course we would all like to be debt free. We are not. The debt is
manageable, and the sky is not falling. It is a famous liberal rally cry and
scare tactic
at election time.The government has been spending more than it makes for
decades. We all should get a refund.

> under Clinton, we're increasing the debt.

Oh ! You are back Michelle! Good. Lets start by you going back and answering
my previous questions.

For any of us with a functional memory, we remember when the Clinton
administration inherited the begining of a recovery that was started by the
policies G.H.W. Bush. It is easy to remember the facts when you are engaged
in the process every day as opposed to once every four years.
It is VERY easy to get out of debt when your income skyrockets. Ever had
that happen? I have. It is also very difficult to reduce debt when income is
shrinking. Clinton's debt reduction happened due to a booming economy. If
you would like to refute these facts, please tell me what specificaly
Clinton did to reduce any national debt.
As I recall, Clinton did not have a war on terror to support, nor a 9-11
event to deal with. But he did bomb asprin factories and pass up numerous
opportunities to nab Osama Bin Laden after known terrorist attacks on the
USS Cole and the Trade Centers (he was busy with someone under his desk).
The ecomomic facts are easy to discern when they are taken in the context of
the time and not painted over with revisionist history. You wanted facts.
There they are. You want a solution? Less government. Fewer entitlements.
Fewer hand outs to every little group who promises votes. Fewer taxes for
those who actualy pay them (the middle class). Less regulation.......That
equals more income for the government and consequently a bank account in the
black, not to mention more freedom for our citizens.
>
>> > I'd rather we were all innocent, and have no bombs go off anywhere.

> in Iraq.

We are fighting terrorism all over the world. Saddam did not have the capacity to kill us? Ask the Kurds about that. What about all the ties of Islamic terrorist groups to the Iraqi regime? OH YEAH....they don't report that stuff on NPR. What was the position of John Kerry durring the time leading to Saddam's ouster? Do you know?

>> >> They made the wrong choice
>> >
>> > From their viewpoint (and from any rational viewpoint) *WE* made
>> > the wrong choice.
>>
>> Nice to know you view yourself as rational, and anyone who opposes

>> emotions.
>
> You first. Facts and solutions have been scarce from your side.

This is typical of the Left. No proposals, no plans. Just stand back and watch someone else lead, then trash them for having a bad plan.
The solutions are there, as are the facts. The solutions are happening now in the war on terror. We have qualified people making those decisions. That is what you and I do, is vote for people who hopefully make good decisions. The real question is whether John Kerry has better solutions or just different ones. John Kerry is seriously lacking in solutions. Or should I say, his solution changes depending on which day you ask him. What is the better solution in Iraq now?
I am not a fan of politicians. None of them represent exactly what I would like. I would like more choices, but we do not have them. Given our choice now, it is easy.
Four More Years.

Please cite the pay down in debt that happened in the Clinton
years. Never happened; the national debt increased every year. It is
greater under Bush BUT Clinton did nothing but a few bookkeeping
tricks and the result was a projected surplus not any actual surplus/
pay down of debt.
Jim

Lately I've been using this little "high gain" antenna that my company uses in poor reception areas to boost the signal strength of these little cellular data transmitters we use in our business.

It's about a foot tall with a little coily section, and a magnetic base. Probably your typical antenna for 800 Mhz.. works great.

A couple of days ago, I bought a Scantenna and I mounted it up on a homemade mast. Here's a directory of pics I took while building it all:

http://www.faradic.net/~sphynx/antenna

My little omni-directional 800 Mhz antenna is near the top of my roof (not in the pictures).

The antenna you see in the pictures is probably 6ft below the highest peak of my roof. I used every bit of the 50ft. of RG6U coax that came with the Scantenna and only have the F-to-BNC adapter in-line.

With the Scantenna, the lower band reception seems to be much improved over the smaller antenna I had been using before, but the reception is the 800 - 900 Mhz range seems to be a little worse.

Now, I know that the case may be that the little specialty antenna I have (made special for +3dB gain in 800Mhz or whatever) will always out-perform the Scantenna, but I was just curious if this is indeed the case.

Are there any improvements I can make in my design? I was thinking of elevating it another 6ft or so, but I'm forced to wonder if that would really be of any significant benefit.

Reception on most other bands seems crystal clear, and I've never seen my scanner's S-meter register so many darned bars!

Any ideas would be appreciated. Thanks!

Hi,

If you are using 50 ft of cable from antenna to receiver try
replacing the antenna provided cable with other 75 ohm coax of
lower loss at 800 MHz. Use only good-brand cable with known
characteristics, don't rely on your local radio shop selling a
cable of unknown origin. Also use the right connectors of good
quality, without adapters. This should not be very expensive to
try.

If your cable is already very-good (which I doubt) you will get
about equal. If your cable is not so good (likely) you can easily
gain several dBs (at 800MHz that is, below 300~400 MHz there
won't be much of a difference).

Hehehe! Just testing, just testing. Glad you're wide awake.

You're absolutely correct that a scanner might, in some rare circumstances, radiate a small amount of RF on the aircraft radio's operating frequency possibly causing interference.

All of this is very much "might" and "could possibly" etc but, obviously, no one wants to be on that particular plane if the problem is likely to endanger anyone.

The reality, of course, is that 99,9% of all these bans on the use of various bits of equipment is because they just MIGHT cause a problem, and not at all because most most of them DO cause a problem. The truth is that VERY few pieces of equipment ever cause any problem at all, the airlines just can't afford to take chances though.

Many people are under the hugely mistaken impression that aircraft avionics are highly sensitive and temperamental and that just about any electronic gizmo will cause a plane to fall from the sky.

The truth is that most everyday equipment is FAR more likely to cause a problem with the electronics in your car than with those in a plane, it's just that the consequences are somewhat more dire.

Not so; the PRO94 and PRO94A cannot be programmed by PC, but RS just
recently updated the PRO94B to include a PC jack. RadioReference had
several threads about this.

Cleveland's NOAA weather station on 162.55 MHZ will be off the air Tuesday September 28 starting around 9:30 AM for maintenance.

This might be a good time to try and hear more distant NOAA weather stations on 162.55 MHZ, if there's any others there.

Thanks for the help, Toni.

I'm using the 50ft of RG-6U coax sent with the Scantenna. It has F-conectors on each end, and the kit came with an F-to-BNC adapter.

What would you suggest specifically for cabling? I'm pretty new to this.

Also, based on the pictures I posted, should I elevate the antenna more? Typically how much of a benefit would I get out of maybe 6ft more height?

Thanks

Although people will tell you that you have to use 50 ohm cable for communications type equipment (including scanners), the reality is that few of us will notice the difference it makes. Having said that, I have kept all of my comms tye equipment feedlines on 50 ohm cabling. In a home base type setup, I run a minimum of RG213, and if playing on the higher freqs, I use better, typically Belden 9913 or hardline heliax. These types of cables are typically rather expensive unless you can get it secondhand which can reduce the costs quite significantly (which is what I do - always on the lookout for cheap cable even if I don't need it at the time of purchase). It is up to you whether you want to spend the extra money on the lower loss cables, but it is not always worth it for the average user.
As to height - well height is might, particularly as the frequencies get higher, but depending on the type of cable used, the benefits of the extra height can be negated by the cable loss involved in getting the antenna higher. For my scanner I try and get the antenna at about 10 metres above ground (around 33 feet in height), the benefit of additional height will not always be apparent particularly if you are listening mainly to local repeater based services, but if you are listening to simplex stations or more distant repeaters you will notice a difference. If you cannot get it much higher, at least get it clear of surrounding structures and it should provide improved performance, particularly with services that you may be listening to that are currently obscured by your house.

Hi Tempest,

I basically agree with Matt:

50 or 75 ohms will make small difference. The real difference is
in using good quality low-loss cable. One possible source of
reference is http://thewireman.com/ but there are many others.
You don't necessarily want "the best cable around", just look at
the dB /100 ft loss figure for 800 MHz (or close) and find the

loss for your 50 ft. 1 or 2 dB difference between cables won't make much difference for casual listening. 3 or more dB begins to reduce a lot your reception. If you buy the cable and conectors at a real store they should be able to solder the connectors for you. Mind you, even if this seems simple it is a difficult job to do properly the first time, and a badly installed connector may ruin all your gains.

As for antenna height, the said is good: For normal conditions you want the minimum height that clears the antenna from all surrounding obstacles. From your photos it seems that the antenna is too low. A bit more height, just enough to get it above the roof top, will probably improve reception in that direction.

I have a Pro95 scanner and would like to assemble a easy mount in my s10 pickup that can hold the scanner and allow me to connect external power and antenna. I have the antenna already mounted. I need some kind of holder or pedastol to set the scanner on but still needs to easily removed etc. Right now it just slides around on the seats

Like I said when you posted this 3 days ago, might want to wait until
the pro-94 is no longer on sale for $119....

I have to agree, but I guess that the "full" coverage on 800 MHz may be an attraction to some who like to listen to all of the 800 MHz band without loosing that little bit which is blocked in current model scanners.

Matt

2237. Re: scanner car mounting help

Not sure if there are any commercial mounts available or not, but you may want to look at some of the older (i.e. bulkier) mobile phone brackets that were designed to hold multiple types of mobile phones. Terminate your cable for the external antenna with whatever connection the 95 uses (guessing BNC) and plug it into the scanner and do the same with the power plug - either run it from the ciggy lighter socket or direct from the fuse block (probably better off using the accessories rather than direct from the car battery). Not sure how much damage you want to cause with the fixing of the bracket to the dash, but you could either screw it in or use some double sided tape for a less destructive install. Bit of a dick around having to plug in the antenna and the power every time you put it into the car though - maybe you might want to permantly install a mobile scanner in the car and use the handheld for when you are out of the car?

BC296 is better choice , also much more and better software available,
scannermsater has arc250 soft for this scanner.

I will be spending a week in the Coppel area week of Nov 1 and would like to know if anyone from this area has pro95 programmed for this area with win95 software so I can easily get up and running on known freqs. I will have lots of spare time while I am in town so I need something to keep me out of trouble.

mytemp at rtpscan dot com

Thanks

From: Steve Lynch <srlynch@pacbell.net>
Message-ID: <%Rq6d.2604$JG2.2202@newssvr14.news.prodigy.com>
Source record: 17907

Is there downloadable software for the PRO 95? I thought that I saw something called WIN95, but I'm not sure. If there is such a thing, is it any good, or should I just go for SCANCAT?

Thanks in advance for the advice

And if you find a store demo Pro-94 you may get them to knock off $20 like
my buddy did! no belt clip or box.

$99 for a 1000 ch trunking scanner? That's about right....

Anyone on the eastern seaboard of the United States should hear the telementry from this high altitude balloon launch at 3 PM (1900Z) on Wednesday, September 29. The balloon is expected to rise above 108,000 feet within 90 minutes of the launch from Wallops Island, VA (Chespaeake Bay). Primary frequency is 433.8 mhz FM and secondary frequency is 147.45 mhz FM. A launch control net will be operating on 7.203 mhz LSB with backup on 7.255 mhz (ECARS net). Call sign for the Simsat 1B is N8PK/aeromobile. The telementry will consist of tones that change according to the atmospheric temperature as the balloon rises. Would be interesting to see posts from those who hear the balloon. Good luck.

I'd appreciate any opinions on the Uniden Bearcat BC796D. Is this about the best overall desktop in the $500-600 price range?

I had a handheld Bearcat (can't remember the model) several years ago - the built-in battery overheated and fried the unit about 2 years ago. I certainly enjoyed it while I had the use of it. At the time, I found myself listening mostly to commercial (live close to theme parks, etc.) stuff and air traffic control. Heck, it's ALL fun!

Thinking about asking Santa for this model for Christmas, and thought I'd run it by you folks first. Thanks in advance for any advise.....

I am also an amateur radio operator and have been for quite a few years now.
I personally use 50 ohm cable for all of my installs, BUT, for the average
user, they will not notice the difference on receive only runs - sorry
should have made it clearer that it was for receive only use.

Matt

2263. Space Station Repeater

Newsgroup: rec.radio.scanner
Date: 2004-09-30 12:41:01 UTC
From: Pat Cox <peacox@gloryroad.net>
Message-ID: <415BFEDD.BE39E2A4@gloryroad.net>
Source record: 17928

If you are interested in hearing amateur radio operators work through the onboard amateur repeater on the International Space Station there will be a pass over the southeastern United States today, September 30, from 1636-1646Z (1236-1246 EDT). The downlink frequency is 145.800 mhz FM and if you want to listen for a nearby ham op the uplink is 437.800 mhz. FM. The ISS is at an altitude of 240 miles and easily heard. Take into consideration the Doppler effect and at the start of the pass start listening down in frequency 145.790 and move up in frequency as the bird passes overhead to up in frequency to 145.810 mhz. Would be interesting to see who hears it and your location. And if you want more data posted about other satellites and when and where to listen just let me know. Good luck. Pat K4AVO

2264. BEFORE you buy....

In the last 10 months alone, I've tossed a new Canon camcorder, a Sony N81 VCR, a Sony N900 VCR into a dumpster for being junk. I had to replace a Sony KV-20V60 table top TV that burned-up after sever years of faithful service, and went looking....

I ended up compromising on a Panasonic CT27SL14 with a slight video flaw (a vertical burn-out) on the right and side of the screen after the retailer had delivered THREE Sony KV-27FS320's (and TWO of these piece-of-shit CT27SL14's for a total of FIVE sets) to my home with the same god damned factory defect!

That's right, ALL of them were flawed, and my only consolation is knowing that each trip cost the store $125 (or $625) to deliver them.

If that wasn't bad enough, I just sent a brand new AOR handheld scanner I paid over $600 for last month back to the factory for warranty repair.

No, this isn't bad luck when the proof is in the factory-sealed boxes (or TRASH being passed off as consumer electronics), so the moral is, if you can do without it, fucking DO WITHOUT IT.

Make this Christmas season the most disappointing one ever for the traitorous jew purveyors of Chinese garbage, and adorn yourselves and your Brethren instead with love, respect and a GOOD HANDGUN (before the yellow snouts make mockeries out of those too).

How about at the TOP of the auction, not buried in the middle where
someone is likely not to read it?

>Looks like full disclosure to me.

See above.

>Yep, 100 sounds about right for a fully functional used model.

But it's not fully functional. Someone is expecting a fully working
unit, I'd bet. - I wouldn't bid anywhere near $40 for a unit like that
- much less $70.

No need to make it any more diffislut that it has to be,

Just use a generic cell phone holder. Mount the thing anywhere you
need to in the cab. Some even clip to the air vents.

Run your cables under the dash so that they are out of the way of the
foot pedals (be safe out there) and you're all set.

Don't be - you're right on both counts. If the astronauts are busy,
they will at times turn on the packet system on the Kenwood (or use the
old TNC that's been up there for awhile). They use the same freq -
145.80 - whether working voice or the packet mailbox. The uplink freqs
are what is different.

Seems as though you meant to say "were no WMD..."

What did Saddam kill all those Kurds with? It's well documented by
sources not connected with the US Government that it was WMD.

A week, Michelle is still posting, but no replies yet.

I added AVG, AdAware, Spybot and SpywareBlaster to my friend's XP.
He'll be back this weekend for yet another extensive round of de-virusing.

Last night we discovered that my nephew's router wasn't blocking ports
135-139 and 445 like it should have been; we discovered log files showing
intrusion attempts from hundreds of IP addresses. His linux system is
still intact and under his control.

Umm hello? I noticed it. I read the whole description. The point of my
message was I'm betting whoever buys the scanner will probably miss
that part of the auction, and bid thinking its a fully working
scanner. That was my point.

>There is NOTHING misleading about that auction.

No, you're right - I was simply pointing out that something like that
should go at the top of the auction description or in the description.

>It's clearly stated that the display doesn't work. It's even in larger type
>than most auctions use.
>
>I've always wondered where you guys come from.

??? I come from Chicago. I'm not sure who "you guys" are.

>BTW, please let me know what your ebay id is so I can put it on my blocked
>bidders list. I don't need fools like you bidding on my stuff.

Do some research, it's not that hard to figure it out. And once again,
I noticed it, I'm betting others won't. You're looking to block the
wrong person. I read the full auction description. Others don't.

I personally could care less - I just forsee an idiot not reading the
entire description bidding, and THEN finding out the display doesn't
work. Remember, the average eBay'er doesn't read the whole
description.

>I'd send you a box of dog crap if you neg'd me over a clearly written auction
>like this.

I wouldn't bid on this auction - that is unless I was looking for a
scanner that has a broken display. The point of my message was someone
is going to bid on it and end up negging the seller because they were
too stupid to read the whole auction description.

>You still avoided the question - what's your ebay id ?

You're right. I did.

My point was you had posted it a few times (because I'm guessing) no
responses. You are asking $130 for a 200 channel circa 1992 scanner,
when there's a brand new 1000 channel dual trunking scanner at Radio
Shack for $119.00. My suggestion was to wait a bit until the 94 goes
off sale.

From Cleveland, OH - I heard voice just fine last night (9/29), but tonight (9/30) it was packet. I would be interested in your other satellite data as well!

Thanks.
Erik

Ed:
You are fighting a losing battle trying to convince most folks here, but I understand. In fact I think you are undervaluing the Pro-43.
To those of us who appreciate the Pro43, it is blasphemy to compare it to the Pro-94. You have to be a Mil Comms Monitor to understand. The Pro-94 does not furnish the Mil UHF band (225-400), nor does it furnish the 138-144 range in AM Mode. Both of those bands enable us Mil Comms Monitors to hear mil acft. Both bands are wonderfully accommodated by the Pro-43, perhaps the most sensitive scanner ever made in those ranges. Also the Pro-43 is excellent for MilSatCom monitoring, even with a decent whip like the Radio Shack center-loaded whip. That is exactly how I listened to MilSatComs today from a Pro-43 I have hanging on my bookcase.
You will get double your asking price for the Pro-43 if you advertise it on Email groups or Usenet groups where Mil Comms Monitors hang out. Here they just consider it an old scanner.

AL STERN Satellite Beach FL (28-11N 80-36W) monitoring

That could be, however I worked for an eBay drop off store /
powerseller for over a month - and about 80% of the e-mailed questions
to us were covered in the auction description. People didn't read past
"You are biddong on one widget." Heck, auction could say "You are
bidding on one widget. This widget is in great condition, no apparent
damage, and is size 7. It comes with all accessories included when
purchased new." and we would get 5 e-mails
What size is it? Does it come with all accessories?"

>I guess that's just your twisted way of admitting you were dead wrong from
>start to finish.

No, I'll admit when / if I'm wrong once feedback is left by the buyer.
I was simply making a comment about human nature and the stupid buyers
on eBay not reading the entire auction. Get off your high horse.

If you want to loose a potential buyer, sure. Block my ID from bidding. If I were too stupid to read and understand the terms of an auction, I wouldn't have posted the fact that I noticed the scanner didn't have a display, would I? If I were too stupid, I would have bid at the price the auction were at, and I would be negging the buyer because the scanner doesn't work.

>I would suggest also reading through his feedback if
>you'd like a good chuckle. Seems Evan is an ebay problem in addition to a
>usenet one.

Yes. Please read my feedback. You'll notice 2 of my negs were prior to eBay requiring feedback to be auction related - I toss those out the window - and my other 2 are from buyers who didn't read the terms of an auction.

>Since Evan, so politely, invited me to "look it up", I decided I would. What
>I found was an abomination. It appears that Evan is quite adept at making
>enemies on usenet

Yes, please - look me up. But feel free to also NOT look up someone who doesn't have the gall to post a real name ("Mark???" and a real address. I have nothing to hide, apparently Mark does - as he posts no real name (full name that is) nor e-mail address.

>Hey, Evan, which one of your bonehead moves got you the nickname "Opie"? LOL!

You tell me.

>Now I don't feel bad adding you to my killfile. Congratulations, you're the
>2nd one to make it there over the last 8 years.
>
>Enjoy the last word. I won't see it.

Good. Everyone else will.

Of couse, based on your headers, you're in Germany, and since I don't buy outside the US, feel free to add me to your killfile / eBay blocked buyer list.

But to anyone else, sure, feel free to block me if you feel the need
to loose a potential buyer - if you feel my feedback shows it's worth
your time.

But my eBay feedback is known, how about yours Mark?

Guess we'll never know.

Evan,
Point taken.
I was expecting more response due to the sort of "cult following" the
43 has had in the past. I realize that its not a fair comparison to
contrast the two as they are totally different.
Thanks for the discussion,
Ed

Q: What is the Buy it now price for it?
A: But it Now was $270. It disappeared after the first bid. I don't
know exactly what happened. cturner

http://pages.ebay.com/help/sell/bin.html :

When you choose the Buy It Now option on Online Auction Listings
(available for single quantity only), your item has two ways to sell.
If a buyer is willing to meet your Buy It Now price before the first
bid comes in, your item sells instantly and your auction ends.
OR, if a bid comes in first, the Buy It Now option disappears. Then
your auction proceeds normally. (In Reserve Price Auctions, Buy It Now
disappears after the first bid that meets the reserve.)

That's on hold; much of the impetus for that project got put on hold
when Columbia was destroyed. Talking to an astronaut friend of mine
(who was on both Columbia and Discovery), it's my impression it won't
happen until late next year sometime. It's definitely coming though;
AFAIK, they've commissioned the software (a modified version of
Chromapix) and all the hookups. It's awaiting the proper slot to get
sent up. Right now, understandably, the push is to get the essential
supplies up via the Soviet launches.
Once the shuttle launches resume - Spring 2005 is the last I heard -
that's the time folks should start watching for announcements about
SSTV. Not until then.

2299. Icom R-20 Opinions

Newsgroup: rec.radio.scanner
Date: 2004-10-02 00:23:18 UTC
From: consigliori <brltigersnospam@cox.net>
Message-ID: <Vxm7d.10093$0j.954@lakeread07>
Source record: 17964

Ok, I recently (2 weeks ago) purchased a new ICOM R-20 from Universal radio and here are my novice opinions:

1) My experience with Universal was top notch to say the least. Everyone I spoke with was knowledgable and the radio arrived on time. Cannot recommend them any higher.

2) Physical construction of the radio is excellent (with the exception of the antenna). Tight fit, great design, good feel with the buttons/knobs. I've come to expect this with ICOM having owned an R2 and a R10 and I wasn't dissapointed.

3)Battery life was above average. Manual states around 11 hours of use but I was getting 12-13 before charging on Rx only and not using the record function.

4)HF - on par with the R2 and better than the R-10. Able to listen to amature radio on LSB ~3.925 range with no problem with stock antenna. Also able to listen to various USB utility freq's as well. Cannot record either with the "automatic recording" option as the background noise on HF does not allow the squelch to open.

5)VHF - Above average with the Stock antenna. I compared the Rx of the radio with both my Pro-43 and my Pro-92. With the same antenna, the pro-93 was first with the Icom 2nd and the Pro-92 third.

6)UHF - Again, with the same antenna, the results were the same as VHF. IMO the Pro-43 is one of the best scanners ever made from a sensitiviy standpoint and I can't hold it against the ICOM for not matching it in performance. The difference was minimal but the Pro-43 was still the winner.

7) Above 1ghz - no experience and have not yet tried to RX anything above this freq.

8) Programming - I made the mistake of trying to program this radio like my R-10 and that was a mistake. AFTER reading the instructions the programming was not that bad. I hope to buy the software/cable with the next paycheck but as always, something seems to come up :)

9)Recording - Man, I don't care if the R-20 sucked in every catagory I would buy it again for this feature alone. The radio comes with 20 "tracks" and up to 4 hours programming depending on the level of quality you select (personally, I found the worst setting to be better than what I was doing before - placing a "Y" connector off of the headphone jack and running one end to a tape recorder and the other to a external speaker). You can either record " on the fly" or can set the radio to record when a signal breaks

squelch. With the exception of HF, this feature works perfectly. While watching football on Sunday I set the scanner to scan a specific bank of police freq's with the automatic record set to "on". When the game was over(about 3 and a half hours) I checked the radio and I had about 25 min. recorded. In short, I was able to listen to everything transmitted during that timeframe with no gaps between transmissions. In addition, you can FF or REV through the digital recording just like a tape player without having the "lag" a tape produces on startup. Man, if this feature only worked on HF I would be in Heaven!

10) Dual Watch - Haven't really played with it that much but hope to remedy that this weekend.

In closing, I paid $500 (US) for this radio and consider the money well spent. I don't know about you, but that is a bunch of money on this end and I spent many hours researching what I would buy before I did. I almost got the AOR but bought the ICOM due to my positive past experiences with the brand. I hope this information is useful and will update as I have more time to spend with the radio.

All my best,
KD5LQV

2306. Boeing Aircraft Trunk ID list?

Newsgroup: rec.radio.scanner
Date: 2004-10-02 17:21:12 UTC
From: Ken Bessler <kg0wx@NOSPAMyahoo.com>
Message-ID: <2s86auF1igeo7U1@uni-berlin.de>
Source record: 17971
Cross-posted to: alt.radio.scanner,rec.radio.scanner

I'm looking for a comprehensive list of Boeing aircraft
trunk talkgroups id's for the Wichita, KS facility. I did
find this site:

http://members.tripod.com/~crashfirerescue/boeing.html

That site seems to be the only one out there - I tried several
search engines and even did a Google usenet search but
crapped out.

I know there's more than 17 groups - way back when, I
remember having a program that logged all id's while
searching. That program showed about 75 talkgroups.

That was at least 2 years ago and I don't have my BC780XLT
to do that kind of logged search anymore and I don't
even remember what program did that. What's worse, even
if I could get a list of ID's that way, I'd still need to identify
each id's purpose.....

Anyone care to help?

I got stung by this. I bought a 785D which can't get the Michigan State
Police trunked at 9600 baud. Michiganders beware! Of course I need a
796 now.

I wish they offered the same optition of buying the radio without the
digital card. I think the 785 its just about identicall
to to the 796D except for the 9600 baud trunking that the 796D has. I know
AOR has an add on box that will work with other radios if they have a If
out. Some of the older radios do or can be modified but I think the AOR box
is 350.00

2316. Local police method of defeating scanners ?

Newsgroup: rec.radio.scanner
Date: 2004-10-03 04:23:56 UTC
From: Tempest <tempest@HEHERemoveMEmidsouth.rr.com>

Source record: 17981
Cross-posted to: rec.radio.scanner,alt.radio.scanner

Hey all.

A small town local to me does something that I think is meant to discourage eavesdropping on their public communications.

When their system is not in use for broadcast, the system 'keys-up' about every 2 seconds, as if someone was sitting somewhere pushing the PTT button on their radio.

This, of course, makes monitoring a pain because the scanner stops every time it hits the active frequency.

Has anyone else here heard of anything like this? If so, is there any feasible way of "getting around it"?

Coceivably, I can see in my mind how defeating this nuisance could be accomplished using some pretty sophisticated design in a scanner, but I dont know if this has been addressed yet.

FOr now, I'm just gonna have to skip listening to Billy-Bob and Festus down by the grain elevator.

Thanks!

I'd be willing to bet that the system in question uses a PL tone, and the "key-ups" you report are not toned, otherwise it would drive the officers and dispatchers crazy. Solution: get a scanner that has CTCSS, determine the proper tone for this system, and enable it.

Sounds like what the FCC calls, "Intentional Interference" and is unlawful.
Check with your FCC field office.

I'm just wondering if that would be considered 'intentional interference' by
the FCC if the same folks who hold the license are the ones doing the keying up.

This appears to be an LTR system, and the key-ups are used to keep the
subscriber units connected with the system. Try using an LTR capable
scanner such as a BC780, and give it a go.

These files are generally DBASE files. If you have a copy of Microsoft Works, you can open the file with it. Foxpro (which is part of MS Office) also works for these files. The particular file you are speaking of is probably a DBASE 4 file.

I'm wondering about yet another possible scenario or two. Are you sure it isn't a "birdie" which would make it "appear" as though being keyed up? One than perhaps the actual transmissions are strong enough to override? Something which produces a pulsing effect which interferes on that frequency would produce the symptoms. Another scanner nearby could produce it. Every time it hits a certain frequency as scanning or stops there, this scanner could be subject to it. I have 4 scanners here and there are similar situations.

Could be the LTR - not saying it isn't, just giving another theory to look into. Also, yes, there are some "faulty" transmitters out there, maybe one not really aware of by the licensees! Then you have clowns with radios that do play, though the latter doesn't sound in any way to be the problem at hand. The radio system could have a faulty keying circuit too, especially if using a phone line relay system. Weird things happen.

Here in the Uk the police on one motorola trunk system used a talkgroup that would broadcast a "Scanner trap one" "Scanner trap two" Etc. message which would make monitoring with a conventional scanner an even worse headache than just trying to monitor a trunked system because your scanner would... well get caught up in the scanner trap messages. Solution? Get a trunking scanner and lockout that talkgroup.

I have to agree now that I have looked at both ARC250 and Scancat gold. The price is very fair. One thing I want to do is put in frequencies for something like the News Media and log the most active to a file so that I can delete the inactive ones. I think ARC250 will take it a step further and record the audio to hard disk as well.

Is Radio shack planning on putting out a mobile or base digital scanner?
Their handheld scanner is a little disapointing in that it leaves out the
UHF Aero band. I have also looked at the ARO box that will hook up to a 10.7
If output on some radios but I think the little box sells for 369.95.

This sounds like an LTR MultiNet system. If that's the case, you can't
track it with any scanner currently available, and I don't see any way
around it.

I found this googling.

2333. Scanners similar to Radio Shack/Realistic Pro-29 Model

Newsgroup: rec.radio.scanner
Date: 2004-10-04 03:37:11 UTC
From: blurr <bob@home.com>
Message-ID: <4bh1m0ladq62l94ueskonrjisv0tqif0dq@4ax.com>
Source record: 17998

Hello All,

I have a Radio Shack/Realistic Pro-29 scanner that I've owned for about 7-8 years. I've enjoyed it for many years and find it better than most 'newer' scanners as it doesn't have the cellular or portable phone bands 'blocked'. I'm looking for scanners that may have similar operation and have those bands unlocked (I.e. have the ability to hear the cellular and portable phone transmissions).

Does anyone know of any scanners that might be able to do this? I've been checking on Ebay and found a Pro-23 which looks similar but I'm not sure if it covers the same frequency range.

Any help would be appreciated!!

Thanks in advance,

Jordan F.

Hi all,

I was wondering how the AOR AR-3000A preforms on VHF and UHF airband. I have the chance of getting a cheap one and want to know how they perform.

I have a 3000 [no suffix] and although airband isn't my thing, if the price is right I'd go for it! Good, if not outstanding, receive performance + easy (?) to interface with a PC. Bit long in the tooth but still a fine bit of kit.

It's a sod when the lithium battery dies though :-(

Hi all,
i'm biased, it's a crap radio.

I've had both the 3000 and the 3000a when both were released. Both had useless hf reception with phase noise of the LO and reference osc affecting ssb reception. both had very poor adjacent channel selectivity in VHF/UHF. I could hear a police channel 25 Khz up the band as clear as day! Both were useless on the telescopic ant for hf. The dealer / manufacture response was to use an external.

Both were retruned for a full refund VERY soon after delivery.

I had hoped the 3000A had fixed the problems of the 3000 but to no avail.

I had a 2001 and 2002 both were excelelnt receivers, I had expected similar performance from the 3000 and was let down.

I'm biased but i'd stay away from them.

Greg

Replacing the battery is a time consuming although not difficult task. The
first time took me 3 hours, the second about 30 mins. Still a PITA though :-(

The of course you have to reprogramme the search/scan bands - easy via a PC but
a bit of a grind if you have to do it via the front panel.

I would certainly agree they're nowhere near as good as a dedicated HF receiver, but OK for casual listening. I treat my AR3000 as a V/UHF receiver with the added bonus of HF.

> very poor adjacent channel
> selectivity in VHF/UHF. I could hear a police channel 25 Khz up the

Yes, the filters are a bit wide & leaky but I think you were unlucky with yours. Mine can't sort out 12.5 kHz spacing too well but is fine on 25 kHz channeling.

> Both were useless on the telescopic ant for hf.
> The dealer / manufacture response was to use an external.
>

Did you switch the internal HF preamp on? But you are right, the supplied ant is far from ideal on HF. Much better to throw 20 or 30' of wire out of the window and use that.

> Both were retruned for a full refund VERY soon after delivery.
>

I think you were expecting too much for your money, especially 10 or 15 years ago. However, as a good all round compromise in 1 small box I think the 3000(A) has a lot going for it.

You pays yer money, yer takes yer choice . . . .

Hi Troy
i use an AOR scanner i don't normally listen to air band only now
and then but i can receive air band with 100% clarity then again i can spit
on the runway of Heathrow airport and the AOR i use even does the new 8.33
spacing...
go for it i have brought and sold loads of scanners over the last three
years and by far the best scanners i have had come through my hands are AOR
top bit of kit...
i would Go for an AOR scanner / communications receive over almost every
scanner on the market.
Look at it this way lots of government and military establishments around
the world use AOR equipment.....if its good enough for them its got to be
good kit.
go for it the cheapest i have brought an AOR AR3000A for was £180 this was
because the owner lost the box and manual no problem phone AOR and had a new
manual delivered you can even down load a manual
Hope this helps

then again if you read his original post you would see he is interested in
VHF / UHF air band and he didn't mention using HF.
you may say i am biased but then again i have there to of the line
communications receiver latest model.
there is nothing wrong with AOR equipment if you want a bad receiver try the
Yaesu VR5000 this is the worst receiver i have ever had pass through my
hands....
if your only using a set top antennas you are not likely to receive very
much as hand held scanners are designed for portable use and if you want
good reception in doors you really need an external antenna.
trust me i know.....i use one of three external antennas for various parts
of the radio spectrum.....i have a random long wire for HF i also have a
full sized G5RV 102feet long for the amateur radio bands i also have a royal
discone for VHF/UHF....trust me go external antenna if you really want to
hear anything in doors...
Hope this helps.

Hi, I have just been given an old (I think) handheld scanner model Atron PRX-100.
Very difficult to find my way around it. Done an extensive Google on it.
Only reference I can find to it was searching through google groups and a couple of very small posts in Dutch from 1997.

Does anyone here possibly have any information on this scanner and hopefully point me towards a manual for this beastie

Thanks in advance
Ian Lowrie

Stay away from the Rat Shack. The Pro-96 has a firmware bug concerning the reception of some analog talkgroups.
Rat Shack had the nerve to tell me that a fix might be possible based on MY PROXIMITY to the affected system.

What a joke. I returned mine and bought a Uniden, which has mil air and no bugs.

I bought E-Scanner Plus from Uniden when it first came out since there wasn't anything else around at that time. Version 1.0 had a lot of problems, including a load of communications errors when it wrote to the radio. Version 2.1 is better, but it's still not all that great. Uniden has reduced the price (69.99 down from a hundred bucks), but my advice, for what it's worth, would be to go with ARC250PRO as brammtje recommended. Since I got ARC250, it's the only thing I use with my BC-250D. It's great for programming the radio and I love the virtual control window.

I have seen a group on Yahoo for the new radio shack scanner. pro-2096, They have some pictures and a pre release manual. I have only taken a quick look but It looks like they basically pot the pro-96 in a box. I do not see any mention of RS-232 port but I was in a hurry. I know understand they planed a base unit as well.

I read that its been type accepted but no mention of when it will be in the store.

I have looked at all three. One nice thing I like about ARC250 is what appears to be the ability to cut frequencies off the web or text and load them in. I have to look at it a little more. The web site Frequency of Nature looks like you can do this. I also get the Monitoring times online magazine sent to me and this would be a plus.

The ScanCat software has been around for a long time but I feel its a bit pricy for what it doses. The E-scanner plus software I think is also pricy for what it doses. I also see that Uniden released the control codes so it probably wont be too long before people write their own.

One thing everybody should keep in mind is that the AOR 3000a is a communications receiver and not really meant to be a scanner! New this radio cost over $1000.00 in the 80's and still cost about the same today!

The one thing I am looking to do is to scan a bank or a frequency file and log
the number of hits on each frequency. I see that Scancat will do this but I think
only if you have the se version. I have looked at ARC250 and it will do this to0
but it will not show a hit count next to each frequency though. Is this my only
optitions to do this.

Mike

Well, let's see...Scan Control will not sum up the hits for each frequency, though it does record every one. You could save the hits to a csv file and import it into Excel and make that do the summing...Radio Manager 2002 will record the hits and sum up the number of hits per frequency, but the editor that program uses is horrific to say the least. I think ARC250 is your best bet for something like this, and I'd be surprised if the history file couldn't sum up total hits per frequency. You should ask Gommert about this - he's a frequent visitor to the Strong Signals forums (including the software forum), among others.

Not Motorola -- they're longtime competitors.

I think GE is equivalent to EDACS, but I'm open to correction. I heard the long story once about who developed what, and then who bought whom, and all that. As I recall, the net result is that GE was involved in EDACS.

You need to set the bank and the channels to ED
AND
EDACS channels must be loaded in the proper order, starting with the bank
"01" channel, "00" must be locked out

Thanks Mike.

I did some emailing and ScanCat gold appears to do what I want.
Their SacnCat Gold Se will record the audio but for now I really
do not need that right now.

The ARC250 software will not show you the number of hits on
each frequency but I can probably load it into excell and do a sort
or something like that. I Like the ARC software

If the keypad isn't "locked" then the contacts might be dirty.

I've had to take my BC200 apart a couple times and pull the rubber
membrane/keypad off and clean the copper contacts on the circuit
noard. Dry and reassemble and all is well again (until next time).

If you tell us what department you're trying to monitor and what you know about their freqs etc., maybe someone can help with scanner setup. As I write this my PRO-95 is simultaneously scanning EDACS and Motorola trunked systems, as well as multiple conventional channels. The radio is competent, but its manual is poorly organized. That reminds me, I should finish the critique of the PRO-95 that I started a couple months ago.

Try putting stuff like "trunking scanner", "trunked radio", etc. into a search engine. It should come up with some useful pages.

I thought the denomintor for an "A" model was the programming
jack? I'm still kinda new with mine. I can set it to light up whenever
a signal comes in, though.

Looking under the belt clip----(PITA)

Cat No 20-524A
Serial Number 34011xxx
Date code 05A03

From the info I have, an "A" model would have the part
number 20-524B....

Then to make things more confusing, RS is suppose to be
working on a "C" version, the PRO-94B....

Getting a headache.

Ken

On my R2, when I press the Band button, after it hits the bands, I get "CH1" which goes up to CH59
These seem to be pre-programmed. Some seem to be FM broadcast, some are locked out. These are NOT channels that I programmed, and this is NOT the "channel scan" mode. I can not seem to find ANY refenence to these. They do not appear in software, and the button combos have no effect when these are on screen, there is also a strange letter combo on the lower right of the screen, looks like a "tw".
Anyone know what these are, can they be changed? How can some be "skipped" if I can't seem to get any access to them??
Anyone?

Cellphone air-vent mount works great.

Keeps it at eye level, and you run the power from the cig lighter, and
an outside antenna.

Been using it for at least a year with great success.

$9 at Target.

Source record: 18045

ok...I have my trunked freq's in a seperate bank (bank 0) and have channel 0 empty. I have a couple of q's:

1) I have 2 "sets" of freq's....140ish Mhz and 800ish Mhz. Does this seem right? (these are for the London ONT cops)

2) I seem to have 2 800 Mhz control channels (CTL-01 and CTL-02 on the display)

3) The manual states that with EDACS systems, the channels have to be in LCN (logical channel number) order. Is this simply in order by frequency # or is there another way to determine the LCN?

4) When I scan just that bank, I am not receiving anything, it is not even stopping on the CTL channels which make that awful racket continuously. I would think that in a city of 350,000+ I would hear a lot of voice traffic, I sure do in the smaller (pop 3000) communities that are on conventional systems.

Any MORE help you folks could provide would be great.

Thanks again,

R.

>> Getting a headache.<<

Understand the headache but where are you getting your information?? Mine is a 20-524A and the only jacks on it are headphone and a external power/charge.There is a blank tab below the power jack that looks like they might have been thinking of putting something else there.
I also have a Pro-2067 (20-196A) 500 ch mobile scanner and it has a jack to clone data from one scanner to another scanner which should also have a data jack. May be they have changed some of the later 94's for cloning. I also understand that some individuals have developed software for programming the 2067 through this jack. I never did pursue this software as it didn't interest me as I have a BC895 XLT that is programmable and it serves my needs/wants. Rob Mills~

> right? (these are for the London ONT cops)

The official site says they're using a "3 site, 20 channel, 800
megahertz trunking system", so I'd recommend the 800 MHz freqs.

http://police.city.london.on.ca/Technology/TechRadioOverview.htm

> 3) The manual states that with EDACS systems, the channels have to be in LCN
> (logical channel number) order. Is this simply in order by frequency # or
> is there another way to determine the LCN?

The LCNs aren't necessarily arranged in order of frequency. If you
don't know the LCN assignments it's possible to determine them by
trial and error.

> 2) I seem to have 2 800 Mhz control channels (CTL-01 and CTL-02 on the
> display)

If a control channel is active, the CTL-01 or CTL-02 should be
intermittently replaced by talkgroup numbers when users are talking on
the system. Do you see that?

The other freqs -- do they sound like they're trunked and part of the
same system? Park the scanner on each one for a while and listen. Are
you hearing voice? The web site says the system was designed to allow
digital encrypted voice. The PRO-95 can't handle digital voice, even
when sent "in the clear".

Hello to all:

I thought I read a few months back about a companion-type handheld scanner to Beartcat's analog 246T called something like the 346 which would have trunking, near-field capability, and have digital?
I can no longer seem to find any details about it. I read it was supposedly due sometime next year (2005) and I thought it was odd that Uniden would put a new digital-capable scanner which would compete with its analog counterpart so soon after the analog version would be coming out.

Anyone have better insight to the digital version?

If you could, please also CC me on replies - scott@ehrlichtronics.com

Thank you.

There's a very easy way to answer the OP's question - find the scanners of interest and compare the sensitivity ratings of each - these are usually clearly indicated in the technical specifications of the scanners and are not subject to personal interpretations...

Then all you need to do is make sure you have a decent antenna setup otherwise all the sensitivity in the world isn't going to do you any good! Oh, you may also like to compare the selectivity figures as well - the ability to reject other nearby signals. Not much use having an extremely sensitive scanner if it hears every signal within 500kHz of the desired frequency!!!

Just my twenty two cents (incl. GST) worth....

Depending on the vehicle, I might be able to get the cost of your mounting bracket down to a coat-hanger.

I bent a hanger into a "U" shape, the bottom of the "U" being just slightly wider than the width of the belt-clip on the back of the scanner. The ends of the "U" are measured to fit into one of the air vents on the dashboard. When the proper measurement is known so as to hold the radio against the dashboard snuggly, a tight hook is bent into each end of the "U," in order to be able to slide it through the vent fins and catch behind a selected fin. The radio and the custom "mounting bracket" can now be installed and removed quickly and with little fuss.

The type of vehicle is important in that the vent needs to be facing the driver/passengers. The vent also has to be capable of being closed off so that the radio doesn't overheat during the winter or have problems with the air conditioning in the warmer months..

I found that the vent on the driver's right side is the best as a radio there usually doesn't block the view of the gauges nor does it get in the way of the AM/FM/etc. radio in the dashboard. If you are stuck with only being able to use the rubber flex antenna, mount the scanner on a vent fin that allows the antenna to be above the dashboard heighth. The windshield glass and/or open side windows allow for just a little more signal to hit the antenna than it would get from being enclosed by all of the metal below dashboard heighth. The scanner at this heighth is also easy to have its display read without taking your eyes very far off of the road if you're driving.

I've used my Pro95 in several cars in this fashion. The radio is light enough that I have never damaged a vent with it.

The big difference between the 5 and 6 is the CPU.
The 2006 uses a faster CPU for quicker scan times
26cps vs. 13cps, if I recall correctly.
Aside from an extra bilateral switch in the 2006's
squelch circuit, both are identical.
Later versions of the 2006 use a light switch instead of
a dimmer to conserve the EL panel's life.

Their server seems to be having problems right now, but if you call Scanner Master, they can sell you ARC250; there are 2 versions, basic and pro. You might want to go to BuTel's page and check out the differences. Their page is:

Adam look at the magazine Popular Communications August issue. It is just
starting
a series on neteork controll and radio server setups. Also look at
RealNetwork site.
I think they have some freeware software called Helex Server Basic.

1. Please don't post binaries to the group.

2. $200?? You're kidding right? One can be had for less than $100 on
eBay.

The highest it's sold for in the past 2 weeks on ebay is $99. There's
a few on there now, $43 with 9 hours left, and 2 others at $46.

Message-ID: <ufpim05v1mifjqpcn8r87i2p2c8greb4gi@4ax.com>
Source record: 18075

Is anyone familiar with the Uniden UBC-3300XLT unblocked trunking scanner? It is touted as being able to trunktrack EDACS, Motorola, and Johnson systems & is APCO project 25 digital capable. Freqs are 25-512, 806-960, and 1240-1300 Mhz.

Could such a receiver be able to trunktrack mobile phones as well as public service comms?

TIA!

lynn

Hi Troy,
As for the most sensitive scanner across VHF & UHF, my answer is a Yupiteru MVT 7100, though it is a handheld.
Let me qualify.
I don't trust sensitivity measurements - some scanners are better than spec, others are worse. As an example, the Alinco handheld I have only lists typical sensitivity - in many cases it is worse when tested. The 780XLT I have is good, but not great as far as sensitivity is concerned.
I've owned quite a few scanners, and tested most of them:
Pro 2003
Pro 34
Yupiteru 5000
Icom R1
Yupiteru 7000
Yupiteru 7100
AOR 8000
Uniden 200XLT
Uniden 760XLT
Uniden 780 XLT
AOR 3000
AOR 5000
Alinco X2000
Icom 7000
and I've also made comparisons to others that fall outside the definition of scanner, like amateur radios & commercial two way radios as well.
The Yupiteru blew them all away, offering just over 0.11uV for 12dB SINAD under test from about 30 to 600 MHz.
But, depending on your situation, the most sensitive is not necessarily going to be the best. You need a balance of sensitivity, interference rejection, audio quality and maybe features and ease of use if you are worried about those points.
By far, the best base station I have in this group is the AOR 5000. It is quite sensitive, and suffers NO interference unless you are really close to another transmitting station.
All other base stations in my list above suffered moderate to debilitatingly severe blocking / intermod / etc. without the use of a FM trap (filter to reduce the 88-108 FM broadcast band) - AOR 3000 included. The test conditons are:
outdoor antenna, Tandy Discone, elevated to 10 metres above ground with very high quality cable, and within 10km, I have 2 x 5kW FM transmitters, and within 40km I have 5 x 200kW FM transmitters, both line of sight. Other radio activity is quite low, with the exception of a few 148 MHz pagers.
On a budget, though, a PRO 2006 has a good reputation.

Something a bit more upmarket, I suggest AOR 3000.
And if you want to go all out, AOR 5000.
Me, fanatic? Never....
Ta - Jason

Really, I've got a UBC780XLT and I'm not over impressed by it's
sensitivity and it's poor on AM.
It's certainly a bit deaf compared with my Yupi MVT-7100 handheld.
Regards Mike.

Gentlemen, I have made http://jidanni.org/comm/radio/programs/selcal :
generate ICAO SELCAL tones just like on HF aviation radio using xmms
on GNU/Linux. Purpose of this program: bring the sounds of air
traffic control into one's living room to impress guests, I suppose.

Why to identify the aircraft if I hear it, that's why.

Pretty simple.

By the way it's N958PG, as far as I know.

You know, I keep reading about the whole vent mounting thing, and it just doesn't seem logical to me. First, if you ever run air through the vents, you're going to get that hot or cold air blowing directly onto the scanner; not a good idea in my book. Second, those fins on the air vents are made of REALLY cheap and THIN plastic. The first good bump or pot-hole would most likely pull the vent right out of the dash, if not at the very least break off whatever fin(s) the thing is attached to. Personally, I'd never attach anything to an air vent. The things break on their own too easily as it is, without adding to the problem...

Air traffic control doesn't use selcal tones. They're pretty much
limitted to the ARINC frequencies.

Radio Shack sells a mount that has a suction cup for the windshield and an adjustable grip for whatever you put in it.
It comes in 2 different sizes, and I have used it with my cell phone, PRO-92 and PRO-96. It is $30 here in N.H.

According to the civil aviation registry:

N958PG is Assigned

Assigned/Registered Aircraft
Aircraft Description

Serial Number 24118
Type Registration Corporation
Manufacturer Name BOEING
Certificate Issue Date 01/23/2002
Model 757-236
Status Valid
Type Aircraft Fixed Wing Multi-Engine
Type Engine Turbo-Jet
Pending Number Change None
Dealer No
Date Change Authorized None
Mode S Code 53251653
MFR Year 1990
Fractional Owner NO
Registered Owner

Name PALS I INC
Street 4 EMBARCADERO CTR FL 35

City SAN FRANCISCO State CALIFORNIA
Zip Code 94111-4106
County SAN FRANCISCO
Country UNITED STATES

Airworthiness

Engine Manufacturer ROLL-ROYCE
Classification Standard
Engine Model RB.211 SERIES
Category Transport
A/W Date 08/29/2002

Other Owner Names

None

I know that the 785D will track the higher controll channel at 9600 baud but was their any other
differance between them. The 785 is sold with the card installed. But is their anything else that the
796D will do that makes it differant? Even though the radio is still on the Uniden site it looks like
most places do not sell it anymore.

Because it helps us complete out database of people who think
a question shouldn't be asked if they don't approve of the reason for
asking the question.

You know, the kind who go around saying, "What need has anyone
of an automobile that can exceed the speed limit?"

I'm recording 24-7 in Washtenaw County Michigan but I produce summaries
instead of offering a live scanner. And I'm still working on code for
network scanner control in PERL and C. Everything I'm using is
open-source and will soon be building a howto.

I needed a way to capture the audio and archive it in an economical
format. I'll be uploading monthly summaries to archive.org starting at
the end of the month.

The details:

I own a 785D and my only limitation came up when the Michigan State
Police started with the 9600 Baud Trunked system. I can get bits and
pieces if I scan them non-trunked.

Unless one of your target agencies is trunking at 9600 baud, I wouldn't
waste the money.

Not all 2006 are 2006 models, many early ones had left over 2005 parts
in them, I think Bill tells in one of his books how to tell.

We also found out when installing the CE/HB-232 interface and Pro-Turbo
software that some 2006 scanners would not work properly with the 2006
settings file, but would perform perfectly with the 2005 settings file,
turns out that all the ones that needed 2005 settings files where the
early 2006's with 2005 parts in them.

The 796/296 does 9600 baud Motorola systems, where as the 785/250 only
tracks 3600 baud Motorola systems.

Both the 785/250 and the 796/296 track 4800 and 9600 baud EDACS systems
(as does the BC780). 4800 baud EDACS systems are often found on 900 and
UHF where 12.5 KHz steps are common.

Could I ask, why you would instead, offer up recorded incidents rather than
live streaming?

I think people would be more inclined to listen if it were streaming instead
of recorded.

> Has Uniden or anyone come up with a solution for increasing the contrast
in
> the 780 display?

From http://myweb.accessus.net/~090/bc-780xlt.html:

There is no variable contrast control in the 780, however, on the display board, near the middle, you will see an 8.3K ohm resistor, marked "832". Changing this resistor will affect the display contrast. The optimum range seems to be about from, 7.5K to 10K. It's a fairly narrow range, so its easy to see why some displays may be a bit off peak. Remove the 8.3K and replace it w/ a variable trimpot of say, 5K, with a 5 to 6 K in series. Be sure to anchor down the new configuration or you can expect it to come loose from vibration.

2455. Looking for frequencies in Ottawa

Newsgroup: rec.radio.scanner
Date: 2004-10-12 22:45:30 UTC
From: Jad <jad22@golden.net>
Message-ID: <udSdnd7gn6Myw_HcRVn-oA@golden.net>

Hi everyone I am new to scanning and looking for the police and fire department frequencies in the Ottawa Ontario, Canada. that actually work. I been trying a lot of the ones posted on different websites, but no luck. At this time I only have one which is 149.6050 and hopping to get response from someone living in Ottawa.

thanks everyone,

Jad,

2458. FS: DTMF Tone Decoder

Newsgroup: rec.radio.scanner
Date: 2004-10-13 04:47:33 UTC
From: W Mac <wgm1@usa.net>
Message-ID: <Fr2bd.4940$Al3.991@newssvr30.news.prodigy.com>
Source record: 17872

This is a neat little unit that will decode DTMF tones received from scanners or any other type of receiver.
It is simple to use. Just run a patch cord from your receiver speaker out jack to the audio in jack at the back of the decoder. The unit will then decode all DTMF tones from any frequency your receiver is tuned to. It shows the numbers on an LED display on the front. It will display well over 150 charactors and buttons on the front allow you to scroll through the numbers. There is also an audio out jack on the back of the decoder so you don't lose your ability to run an outboard speaker.

The unit is powered by 12 V DC and includes the power cable for attachment to a battery or power supply. There is also an ON/OFF power switch on the back. Pictures available. $60 shipped. wgm1@usa.net

I agree with Doug Slug, Brent...."buying" one on Ebay makes no sense $$$'s wise. Shop around the web, theres plenty of dealers that have the 796D for a lot less. Try Communications Electronics in Ann Arbor Michigan www.usascan.com . They have the 796D shipped new with a set of headphones, for $519.95 !! I've bought a few items from them and they are great to work with.

I have owned the 796D for a while now and its a super scanner. I have a lot of digital trunked 800 activity in my area, so this scanner suits my needs just fine. First off...make sure you have enough digital 800 systems in your area to make this worthwhile. Check with www.radioreference.com to see what systems are active in your area. If you live in a small town, or don't have any 800 digital stuff around, you might want to consider an analog 800 scanner, which is considerably cheaper. Another thing to consider is whether or not a digi-trunked system has a 3600 baud or 9600 baud control channel. If any or all of them run 9600 baud cc's, the only scanners around now that will decode them is the 796D, 296D (handheld), Radio Shack Pro-96 (handheld) and soon to be on the marked Pro2096 (base model).

Hope that helps,

Chris

Pro-76 200-ch. vhf/uhf/air portable.Brand new like cond.comes with owners manual,ac adapter $120.00 plus USPO shipping with insurance and certified delivery for proof you got it.will ship in the 48 states if interested email your phone with area code and best time to call you.
BC-220xlt 200ch portable builtin nicad battery pack ac adapter no manual good cond.covers vhf/uhf/air/800mhz less cell freq.$120.00 shipping and contact same as above
by the way im in the Mpls.,MN area in case your local.

2479. Presidential Visit Set for Daytona Beach Saturday Oct 16, 2004 & John Edwards on Sunday.

Newsgroup: rec.radio.scanner
Date: 2004-10-14 22:36:35 UTC
From: GeorgeF <av8tor@licensed4funREMOVEBEFOREFLIGHT.com>
Message-ID: <TbDbd.4344$SZ5.2731@newsread2.news.atl.earthlink.net>
Source record: 17889

Originally scheduled for Melbourne FL the White House has made a last minute change to the Presidents schedule that will bring Airforce One into Daytona Beach on 10/16/04. Vice Presidential Candidate John Edwards will be in Daytona Beach sometime on Sunday (probably early in the day).

As with other Daytona Beach Presidential visits there will many radio communications worth monitoring. For those interested in Secret Service frequencies you can get them here: http://www.milaircomms.com/secret_service.html Most of what is on the Secret Service will be encrypted as in the past. However from time to time ï¿½redï¿½ comms slip through (red comms refers to non encrypted comms, green comms refer to encrypted comms in the world of military and government communications).

However as in the past the Daytona Beach ï¿½Special Eventsï¿½ trunk system will be active. Freqs can be found here: http://www.milaircomms.com/police_fl_volusia.html You will want to program the system marked ï¿½Daytona Beachï¿½. The only active talk group will be 14-xxx. This system only is \ used during special events. In the past the Secret Service also made use of this system as a way to communicate with Daytona Beach Police and Volusia Sheriffï¿½s during the motorcade and security details. All comms on this system are non-encrypted.

At this time I do not yet know when Airforce One will arrive however the President will be speaking at 12:45PM. You can check the NOTAMS (notices to airman) for a TFR (Temporary Flight Restriction) around the Daytona Beach area. For a graphical map of all TFRï¿½s you can go here: http://tfr.faa.gov/tfr/jsp/tfrmap.jsp Once a ï¿½redï¿½ box appears in the Daytona Beach area simply click on it and youï¿½ll then see the detail description of the TFR which will give the effective times (all times will be in UTC).

The most common question I get is ï¿½what frequency can I hear Airforce One on?ï¿½ The answer is the standard approach and tower freqs, nothing special, Airforce One must use the same comms as any other plane in the system. In fact Airforce One most likely will NOT use the UHF freqs but as in the past visits use the standard VHF freqs. So program in the approach and tower (120.7 MHz) freqs in your scanner and youï¿½ll hear AF1.

In the event a CAP area is activated (Combat Air Patrol NOT Civil Air Patrol) the most common frequencies used during CAP missions are found here: http://www.milaircomms.com/uhf_cap.html. 99% of all comms during CAP missions are in the clear (265.400 MHz will probably be the active one).

If you want to see just how close you can get to AF1 and the motorcade hereï¿½s some pictures of the Presidents visit in 2001:
http://www.milaircomms.com/secret_service.html

Have fun & Happy Listening,
George ï¿½ KI4FIA ï¿½ Daytona Beach

=]

The distance depends on the power output and antenna of the other station, geography and the sensitivity and antennas of your equipment. If the other station has a lot of power and a good antenna, distances can be up to a hundred miles if you are in the plains, and less than a mile if they are portable in mountainous regions.
To sum it all up, there is no answer.

Jason

I would forget anything from radio shack. The Pro 96 has a firmware defect.
No mil air (without Win96). No serial connection for computer control. Go
with the 796. Read the manual. If you can, get SCANCAT or ARC250 software
and program it with a computer. Definitely not Plug-N-Play, but that's half
the fun. Enjoy.....

>
>
First off, I have one at work, provided by my employer. IT's a piece of
crap! and here are the reasons....

1 Eats batteries like a dead short.
2 piss poor front end performance
3 "images" like crazy
4 completely misses the "Video" portion of wireless camera bands
5 not much of a TV rcvr
6 controls are very hard to use
7 did I tell you it eats batteries? MAYBE an hour on a set.

Do yourself a BIG favor, buy a good triple conversion scanner and a Casio 3
or 4 inch pocket TV. That way BOTH will do a good job (I carry a Casio
TV-4000 4" display)

The Icom R-3 has been a major disappointment, a real black eye for Icom,
they can't give them away.

Icom R3 is a triple conversion scanner below a certain frequency and a qudruple conversion scanner above a certain frequency.

It is triple conersion on the freqencies that most scanner listeners would listen to.

However, I can confirm that it does indeed have many images (stations appearing on frequencies they shouldn't) and many birdies.

Strange, I go into all sorts of shops and malls with FRS radios, Fire Pagers, Fire Radios, and Scanners and a cell phone - not to mention a pocket knife, etc. and have YET to have ANY alarms go off. As one person suggested, maybe there is a theft strip still attached there somehow. Just a guess! Not sure if those places have any settings to adjust, but if so, maybe they're set to max! The ONLY place I've ever been subjected to searches - and as expected, were in County Office Buildings, Airports. Even there, things like belt buckles, zippers, etc, set them off. Yes, I've taken my fire pagers/radios and so on in there too, but no knife! IF they don't recognize the type of radio it is, all they've done is ask to make it work. No problem. But I also carry ID with me just in case to show my need for said items. And, to make another point clear, any one of those items invariably has been used while in the stores. Still, no problems encountered.

I would have to think the same. I often use FRS radios, now days I have a
couple GMRS ones. We use them in the malls here as often cell reception is
iffy. I have mine turned on, and have never set off a theft alarm in any
store???

The store shoplifting detectors are not metal detectors.

Take the radios back to where you bought them and have them double
check to make sure they disabled the theft deterrent device properly.

And put back on your tinfoil hat.

2498. Pro-93 v.s. Pro-94?

Newsgroup: rec.radio.scanner

Source record: 17762

I'm looking at either one of the above scanners, 93 v.s. 94. It appears the 93 would be the way to go having alpha tags. Yes, less channels, but Idoubt I'd need more than 300. Maybe I would though.

Is there any compelling reason to go for the 94? I'd like alpha, but could live without it. The 94 is on sale at Le Shack for $119, and I'm looking for a 93. Just missed one on eBay for $100.

Any input appreciated.

Thanks. :)

I have, on many occasions, carried FRS radios, scanners, two way radios, ham transceivers, pagers, cell phones, etc. into many different shopping malls and the stores within them. I have never, ever set off a theft alarm.

A two way radio of any type should not set off a theft alarm. There's something else going on here.

Ken

2500. RS Pro-94

I see that the Pro-94 trunk scanner is on sale at RS for $120. So far I've gone to 3 different RS stores and have only found the older (no PC/IF) models. I got a feeling that the 'sale' price is an effort to shed the inventory of the older models. Going to try a couple of other stores on Monday, or wait for the Pro-95 to go on sale again, hopefully.
Anyone seeing the newest iteration of the Pro-94 in the stores? What about those ordered online? Thanks.

Yeah, everyone in my family -always- has a powered up frs radio on them
and we have never set off any alarms in the stores or malls for about three
years.

Jim - I'm fortunate enough that my local Ham Radio store
does double duty as a Radio Shack, hence the store is
about 4x the size of a regular Shack and most the employees
are Hams.

I just called the owner (Mark, KB0MOF) and asked him
- he said they are *not* restricting the sale to only early models.

They have a website at:

What cable does the 95 use? Any chance a standard cable I may already
have, i.e. for a Yaesu VX-10 or such?

Oh, and what's the software called?

Thanks. :)

Air Force One at Daytona Beach

At 3:40pm EDT (1940z), Air Force One touched down at Daytona Beach IAP.
Tail 29000 is AF-1 today. I also heard comms from SAM 28000 earlier today; not
sure where he is staging as the backup.

At precisely 5:09pm Air Force One lifted off from Daytona Beach.
At 5:12, 300.4 (WBFM) opened, as did 295.825 (NFM) , which in the past has been
a SATCOM uplink. Not sure if the 295.825 is related today.

FWIW, I've set off alarms at my local library just carrying a
data CD in my pocket. At one of the two, it doesn't go off if I walk
in off center, but with the CD in the pocket closer to the detector.
If I go in with the CD pocket right next to the detector, it sets off
the alarm every time. It doesn't seem to happen in malls, but the
doorways there are wider. Maybe that makes a difference.

2510. Rare Mil Acft Type Monitored at Patrick AFB

Newsgroup: rec.radio.scanner
Date: 2004-10-17 00:31:55 UTC
From: allanstern@aol.com
Message-ID: <20041016203155.08741.00001995@mb-m13.aol.com>
Source record: 17774

Many of us try to snag comms from the rarer Military acft instead of just
the REACH cargo planes and F-16 fighters that abound.
One of the very few C-32B acft in existence came to work the pattern at
Patrick AFB on Thursday 14 Oct 2004, and I was able to snap a few decent photos
of him. The robin's-egg-blue Florida sky contrasted with the sexy all-white
gleaming image of this beautiful bird.
He arrived at 11:35am EDT (1535z), first working radar approaches with
Approach and then flying the pattern VFR with the tower.
This time he did not come up on 344.6 to get the weather back home at
Eglin, as C-32Bs usually do. Instead he explained to the tower that he was
VHF-only. Also, when getting his clearance back to VPS he IDd his acft type to
Patrick Dispatch as a "T/B-752," which correctly IDs the C-32B as a Boeing
B-757 variant; the T connotes that he is TCAS-equipped.
I have placed three of the photos I shot of DACTYL 80 on my webpage at:

http://hometown.aol.com/allanstern/myhomepage/index.html

Just scroll down below the frequencies on my webpage and enjoy the view.
Is he beautiful or what?

I have these two radios for sale.They are great radios and both do
MARS/CAP.On a scale of 1-10 they are a 9.5.The FT-50 has extra battery and
drop in charger with it.The FT-530 has a drop in charger with it also.These
are both dual band ht radios.I am asking $175.00 for each them.
I also have a Standard C-508 ht.I am asking $100.00 for it.All of these
radios are in perfect shape and work great.Email me in interested in any of
them.I do have lapel mikes that I can put with any of the Yaesu
radios.Thanks for looking.
If these are not sold here,I will put them on Ebay.
I am interested in laptops or a good GPS with maps.

Just out of curiosity, I'm wondering, was the CD in it's protective case too? I'm guessing it was, but don't like to assume anything. I may try that some time to see what any results may be. BUT now another question comes to mind, if it is a "library" issued CD, does IT have any form of theft deterrent strip on it somewhere? I've seen bigger libraries which use a theft system. As I said in my reply immediately above, and as some others have said similar, I've had no problems with radios and such going into various places with alarms. Be it while receiving or transmitting or carrying items such as pocket knives, etc. Maybe some alarms are more sensitive than others, but I've not run into any - yet. Then on the other hand, I've seen one go off even though a person in front of me was checked out and tried to leave. They were checked and found all to be in order, and told to go ahead. So, who knows? Whatever went on there, was obviously a foul up - somewhere. It is possible the machines are able to make errors. Nothing is perfect! Getting back to your post for a second, as one pointed out, those "theft deterrent" devices are "not" metal detectors. So, something else on the CD must be doing it.

Those anti-theft tag systems use a large antenna to detect the tags. The
field needs to be tuned, and whenever a pedastel or antenna gets moved,
the whole field can get out of whack. This is sometimes the reason for the
false alarms. I know I've had a fire radio set off one in a drug store once
out of the 1000's of times I've walked into a building with that radio.
Also, sometimes on high theft items, tags are hidden multiple times on
devices. Often times they cannot be de-activated, rather just makes sure
someones checking your receipt on your way out the door.
I've also had a tag stuck to the color of my shirt once, by a prank playing
co-worker. Had no clue, but everyone who passed through the doorways the
same time I did, nearly got a body cavity search ;)

You may be right on the process needing done, but with all due respect, that may seem a bit suspicious - especially if they look relatively new. The clerk - if no one else - would wonder what the hell is going on. Perhaps a friend who works at a store with such a system can do it when this party makes a trip there while they work. OR allow that person to take the radio(s) to work to disarm at their convenience. Just some ideas to think about.

While we're on the subject, I now recall someone once telling me that his 2 meter H.T. used to set off something in the malls. My memory is not as clear though on exactly what it was. I could swear they said the Radar Detectors on display for purchase, but it could very well have been the alarms. He used an HTX- 202. There again, having owned those as well and used them, I've never had that problem either. In either case, this guy who posted this originally, my acquaintance or others, a case of dumb luck? I'm not speaking a personal or mental issue, but using an old saying?

Thanks for the heads up on the alarm workings, Had a vague idea of their actions, but never gave it much thought otherwise.

Lou

Whoah, that's a neat idea. Using a scanner to find wireless camera
frequencies and then tuning them on a little portable color TV! What
kind of output does the scanner need to have to make this possible?
Also, what is the frequencty range of the wireless cameras?

THanks

<Whoah, that's a neat idea. Using a <scanner to find wireless camera
<frequencies and then tuning them on a <little portable color TV!

that's just the trouble. The R3 does not scan video frequencies. Even
though it was advertised as being able to do so.

and also advertised as a "video scanner"

In video mode, you have to tune manually.

Sort of Like you had to do with audio on the old Radio Shack Patrolman
radios for audio.

Actually, you can enable the 54-88Mhz portion just by
moving the diode that you remove to enable cellular.
This gives you complete 30-88Mhz coverage, but sensitivity
rolls off dramatically above 60MHz, since the front end
components are optimized for 30-54MHz performance.
My pro43's do get some paging stuff around 75MHz
without changing any RF parts.

There are about 9 surface mount caps and inductors you
need to change to optimize the unit for 'mid-band' reception.
I wouldn't consider the mod extensive, but I do board-level
surface mount repair for a living, so I have access to all the
correct equipment.

I'm new to scanning and am interested in using a Discone type antenna I bought on Ebay. I'm going to be feeding my Yeasu VR-500 handheld scanner with it. I live in Central Florida (Lightning Capital of the World, or so it seems) and need info about isolating (grounding) the antenna. I am very concerned about lightning entering my home via the antenna feed.

Can someone give me a URL for info about using (and isolating) antennas, or a good book title that I can buy? TIA.

A 200' "mast"?.... Be it a mast or tower, in most cases - you would have to have to now apply for a permit to install it - from your city/borough government, as most codes now days don't allow for those things. I doubt they would allow a mast. As for a "tower", assuming you get the permit from the local government, then you have to see if it will need registered with the FCC. There again, paperwork. Then there is the cost of the 200' tower. Not a cheap investment. And all this for a "SCANNER"? I don't think so. Out of most people's reach and over kill.

I think the LPDA response was to illustrate the point that in the absence of any real-world contraints or requirements, one might provide an idealized solution. It correctly answers the question, but might not apply to the OP's situation. Perhaps Brent can provide a few additional requirements, such as cost, mounting limitations, bands of interest, etc.?

Even with the LPDA, a 200' mast? OR Tower as the case may be? How many scanner owners do you know who go to that extreme? Hell, many commercial and public safety agencies don't even go that far. That was WAY out of touch for this group. We're talking scanner enthusiasts, not professional or commercial interests. Hell, most people want just a scanner and that makes them happy. Some need an outdoor antenna to pick up as maybe the indoor doesn't do so hot. But to suggest this sort of thing..... I don't know. There are preamps out there, which can do the trick, for sure. That would help, with a good coax - and antenna IF someone can budget it without getting carried away. As I said, then you have permits and registration to be considered. FAR too much for a scanner enthusiast to want to get involved with. At that stage, I'd have to think they would need psychiatric help. That is pure ludicrous. You tell some people this stuff, in need to go with their scanner, they're liable to say SCREW IT, I don't need to know that bad.

Chris van Rossman's television sent out a distress signal that was picked up by an orbiting satellite.

Mystery signal traced to TV

By Jennifer Nitson

Corvallis Gazette-Times

CORVALLIS ☐ When Chris van Rossman moved into his downtown apartment about a year ago, his parents bought him a new 20-inch color TV with all the bells and whistles.

The flat-screen Toshiba came with its own set of stereo speakers, a 181-channel tuner, built-in VCR, DVD and CD players, a V-chip for parental control over content and, of course, a remote control. Van Rossman, unfortunately, does not have cable and can only get four channels in his apartment. He mostly watches Oregon Public Broadcasting, which comes in clearest, and he's acquired a taste for OPB children's programming.

Maybe the television suffered an identity crisis. Maybe it aspired to higher things.

Whatever the reason, van Rossman's TV set sent out a cry for help. It began emitting the international distress signal on the night of Oct. 2.

The 121.5 MHz frequency signal was picked up by an orbiting search and rescue satellite, which informed the Air Force Rescue Coordination

Center at Langley Air Force Base in Virginia.

Such signals usually come from electronic locator transponders that help search and rescue workers find overturned boats or crashed airplanes. It is said that more than 90 percent of ELT signals are false alarms, but each and every one is checked out.

Langley got on the horn to the Civil Air Patrol, an all-volunteer auxiliary to the Air Force, and the CAP got ahold of Benton County Search and Rescue Deputy Mike Bamberger for assistance in locating the source of the signal.

"My initial thought was, 'Oh, it's the airport again,'" Bamberger said. "We've had the signals from the airport go up the Willamette River all the way through Albany and into Lebanon."

The radio-wave signals can bounce off metal structures and rocky hillsides. From time to time Bamberger is dispatched to the airport to locate a transponder in a plane that has been bumped by a mechanic or set off by a rough landing.

But this case was different.

Armed with small receiving devices, Bamberger and a group of Civil Air Patrol volunteers determined the distress signal was coming from an apartment building on the corner of Fourth Street and Jackson Avenue, narrowing the possible sources down to a couple of upstairs units.

On the morning of Oct. 3, van Rossman opened his front door to find CAP personnel in Air Force uniforms, a Corvallis police officer and a Benton County Search and Rescue deputy looking at him expectantly. To his credit, he did not stress out.
"I have a pretty spotless record, so I wasn't overly concerned □ just a little confused," van Rossman said. "The police officer asked if I was a pilot or had a boat or anything. I said no, and they moved on."

After checking in with van Rossman, the group continued the search. "We narrowed it down to a spot on the wall in the hallway," Bamberger said. "Whatever was behind that spot is what it was."

They knocked on van Rossman's door again, and the signal abruptly stopped.
"When he answered the door he turned off the TV, and the guy in the hall said, 'It just stopped,'" Bamberger recalled.

An inspection of the television confirmed it was the source of the signal. "Their equipment was just bouncing everywhere as they turned it on and off," van Rossman said.

Van Rossman was instructed to keep his TV turned off or face fines of up to $10,000 per day for emitting a false distress signal.

He's not taking any chances. He's keeping the television unplugged just in case he forgets one morning, groggy with sleep.

Unfortunately, the warranty on the TV had run out 16 days before it started freaking out. It had already tried to escape the van Rossman household by refusing to play DVDs a few months back, but that didn't bother van Rossman. He has a DVD player on his computer, and besides, he mostly just likes to watch OPB ☐ especially "Arthur."

"I find other stuff to do," van Rossman said. "It's not too important. It's changed my morning routine."

Alas, "Arthur" will have to wait.
Not for too long, though. Maria Repole, director of public relations at Toshiba, is going to get van Rossman a new TV.
"We have never experienced anything like this before at Toshiba," Repole said. "We really value customer satisfaction, and we will replace the television set free of charge."

Repole told Toshiba's technicians about the TV in distress, and they'll be on the lookout in case it happens again, she said.

"They've never heard of that before," Repole said. "They don't really have a technical explanation available. It's just very strange."
David Mandrell, squad leader for the CAP team that responded to the TV's distress call, attempted an explanation.

"All electronic equipment creates a frequency called a tempest," he said. "Sometimes these frequencies emit low-level signals that are close to the 121.5 MHz signal."

Mandrell has heard of this sort of thing happening with customized computer gear. Sometimes CAP equipment will pick up these signals, he said, but they are usually weak enough to ignore.
"This was really strong," Mandrell said. "This was abnormally strong. It kind of surprised us."

Airforce One is the callsign used when the President is aboard (that is what its called on the radio "Airforce One Cleared To Land").

If the president is not aboard the aircraft callsign changes to SAM28000 or SAM29000 depending on which of the two 747's they're using that day.

Really not much secret when it comes to AF1 Comms on the ATC freqs, they have to do just like any other plane in the ATC system....

Source record: 17709

I have had a uniden BC250D scanner for about 2 months now and lately ive been having a very weird problem. Basically the scanner works in conventional mode fine, but in trunked mode it doesnt. It seems to hear a talkgroup, find its ID, and then jump to many frequencies during that conversation, almost like its confused and it bounces inbetween all frequencies programmed in the trunked system. The really weird part is that in convential, the 800Mhz channels can be heard. in trunked mode, this is not the case. Before, the trunking systems worked fine. It is like this on all systems. I have even tried a system reset with the scanner and wiped out the memory. Still nothing worked. Uniden told me to send it it, but im wondering if anyone else had a similar problem? Thanks

Dave

2546. Re: What do you use? Home aerials

<What do folk recommend?
<Without sticking a porcupine on the ridge <tiles, what work fairly
well. I've seen ads <upon ads for discones etc but are these
<capacitance loads really required for the <bog standard scanner, are
these not just <a few (or many) different band aerials in <parallel. Do
these desktop discones work <inside? (any better than a 1/4L whip).
<Perhaps I should make my own 'spiky'. <Any thoughts.

I don't know what the best is, but I'm not rich and can't afford much,
so I hooked the tv antenna up to my scanner and got great reception,
even though the antenna was horizontally polarized.

From my location at the time, I wasn't getting good reception with my
internal antenna that came with my scanner. So I hooked up my tv
antenna to my R3.

All of a sudden, the VHF air band came in great, and even the AM and SW
bands on the R3 came in great with this setup.

And the R3 has very poor sensitivity on AM. With a rooftop TV antenna,
it came in great.

Well, except for the internal birdie frequncies that the R3 generates on
some AM frequencies and some other bands

<While we shop in supermarkets such as <Big W, Target, Bi-Lo, you will hear that <they have their own radio station. What <frequencies are they on? I read <somewhere about an 'offset'.

In the U.S., they're on the regular FM broadcast band on the regular stations but in a mode called "SCA" "Sub-Carrier Audio".

Maybe it might be the same or similar where you are. Then again, maybe not.

It's not audible with a regular FM radio.

I've heard that some scanners can supposedly pick them up if you know what you're doing.

However, I think it depends on the build of the scanner, because several scanners can't pick them up.

Rob

I live south of Tampa at an elevation of 12 feet and 300 yards from the
Gulf. I used the method described in the web page
that Mike posted. I "hydraulically" sunk a 1/2" copper water pipe to a depth
of 14+ feet right at the base of my antenna pole.
I bought two 10 feet pieces and when the first piece was as deep as it would
go, I soldered the second piece on and went as deep as I could push it.
I then cut it off about 6 inches above the ground and soldered bare solid
copper wire (gauge? fattest home depot had) between
the ground rod and antenna mast.
I did not weather protect this soldered connection as the article suggested.
(I may redo it at some point and then weather protect it).

I've been thinking about adding a coaxial surge protector to my receivers
feed line such as this one:
http://www.universal-radio.com/catalog/protect/1305.html

I plan to add a second ground for connection to the back of my radio (an
Icom PCR 1000, which has
a ground screw)

If your extremely concerned about lighting coming in the feed line, I
suppose you could
solder a bnc connector to a copper conductor that is connected to a ground
rod. That way
when you disconnect the feed line from the radio you could store it by
connecting it to this ground.

I don't understand grounding all that well, just that for safety it needs
to be done.

>Nothing is perfect! Getting back to your post for a second, as one pointed
>out, those "theft deterrent" devices are "not" metal detectors. So,
>something else on the CD must be doing it.

Agreed. I did misstate one thing about the position of the CD.
If I walk in such that the CD is e.g. in my right pocket and I walk
close to the left side of the detector, such that the CD is more or
less centered, it doesn'r set off the alarm. If I were to walk in
farther to the right, so that the CD passed very close to that side of
the detector, it would set the alarm off.

They *used* to be on SCA back when the transmissions consisted entirely
of music.

These days they're on satellite.

Some are, some aren't. It depends on how cheap the store is. There are
"Muzak" services out there, though, that broadcast "elevator music" to
stores and businesses.

Amateur Radio Newsline™ Report 1418 October 15, 2004

Amateur Radio Newsline report number 1418 with a release date of
Friday, October 15, 2004 to follow in 5-4-3-2-1.

The following is a Q-S-T.

The FCC acts on B-P-L amd the IEEE readies a standard for Broadband
Over Powerline hardware. Find out the impact on ham radio on on
Amateur Radio Newsline report number 1418 coming your way right now.

(Billboard Cart Here)

**

THE BPL FIGHT: THE FCC RELEASES ITS BPL REPORT AND ORDER

The FCC has acted to make Broadband Over Powerline a part of the
telecommunications landscape. Amateur Radio Newsline's Paul
Courson, WA3VJB, in Washington and Mark Abramovich, NT3V, in Philadelphia take
an in depth look at the FCC decision and its impact on Amateur
Radio:

-

FCC Michael Powell: "Would all members in favor of the item
signify
by saying aye? All those opposed? The item is adopted, thank you
very much (sound of gavel banging down)"

--

(WA3VJB report) Although several took note of interference concerns,
none of the Commissioners voted against the proposal, and only one
Commissioner voted any dissent at all. His issue was thet utility
companies might improperly try to raise your light bill to help pay
for BPL. The measure passed, and BPL can now be built and marketed to
real customers nationwide.

The system thet's been in the prototype stage for a while now uses
the power lines as a way to transmit and receive telemetry with
computers such as those used in the home. In sending that data over
the wiring in a house or on the poles outside, small amounts of
signal radiate and can cause interference to users of the same
frequencies BPL uses on the power grid.

The ham radio community, led by the research of ARRL laboratory
manager Ed Hare W1RFI, documented the potential for electrical noise

during this prototype and testing phase. The League submitted what many consider alarming findings to the FCC as a protest and challenge to the BPL proposal on ham radio's behalf.

FCC Commissioner Michael Copp addressed that point before he voted to approve:

--

FCC Commissioner Michael Copp: "I remain concerned with the question of interference to amateur radio users. I take the concerns of this community very seriously, and I believe the FCC has an obligation to work hard to monitor, investigate and take quick action to resolve harmful interference. "

--

When Copp voted approval, his dissent focused only on whether there were safeguards to keep utilities from using electricity revenue to help pay for BPL.

The proposal from FCC technical staff calls for interference mitigation procedures, including an online public database to help identify by zip code where BPL might be a source of interference, The database also will name a contact person at the company running the system in that zip code, to negotiate and resolve complaints.

Commissioner Copp said he hopes the processs will be quick:

--

FCC Commissioner Michael Copp: "If an amateur radio user makes a complaint, and an agreement between the BPL provider and the amateur radio user cannot be reached, the FCC should step in and resolve the matter. These cases must not take years to resolve. I hope we'll have some really effective rapid-turnaround procedures here in place..."

--

FCC Chairman Michael Powell has been an early flag-waver for BPL, and spent time leading up to the vote praising its potential as a competitive force against existing high-speed data distribution systems. The noise made by those concerned about BPL noise must have reached the top desk, because Powell took time to acknowledge BPL's potential negative impact, although he never said the word interference in his remarks:

--

FCC Chairman Michael Powell: There are users of spectrum that are affected by this. We've taken that seriously from the very beginning. I want to particularly say to all those wonderful amateur radio operators out there. They're still an important resource to the

American communications landscape. They're ones that we continue to care about, continue to want to foster and prosper. And we have taken great care to ensure that the protections in this item are necessary to allow that service to continue. We will continue to be vigilant about it, and put the tools in place for that.

--

But then Powell returned to his celebration that BPL would soon provide another way to bring high-speed data to the masses, citing advantages for homeland security, the reliability of the nation's power grid, and the U.S place in the world.

--

FCC Chairman Michael Powell: "Let me underscore that the potential
for America, and the American economy is too great too enormous, too potentially groundbreaking to sit idly by and allow any claim, or any possible speculative fear keep us from continuing to drive this technology drive America into the broadband future."

--

For reaction to the FCC's approval of Broadband over Power Lines, we turn to Mark Abramowicz, NT3V:

--

(NT3V report) For the American Radio Relay League, the FCC's decision in the BPL proceeding wasn't a surprise.

The ARRL's leader says now, more than ever, amateur radio operators will have to be vigilant about any BPL interference that appears and be prepared to act with a complaint that could go all the way to the FCC.

ARRL president Jim Haynie W5JBP says there were some encouraging comments from commission members about the value of the Amateur Radio service. And, for the first time, an admission from the panel that BPL technology is far from perfect.

--

Jim Haynie, W5JBP: "You go back a year, a year and a half ago, there was all this talk about: What interference? There is no interference," Haynie recalled. "And fully half of the meeting was how to deal with the interference issue.

"So the commission now has finally realized that what we've been saying all along does exist and I'm sure the N-T-I-A had a lot to do with that, too."

--

Haynie says among the restrictions the FCC placed on the BPL providers is establishing a database of utility and system operators who will be accountable for neighborhood interference complaints.

He says it appears that provision may have come out of the ARRL's direct lobbying of commissioners.

--

Jim Haynie, W5JBP: "We've actually had personal meetings with a number of the commissioners," Haynie says. "And Commissioner (Michael) Copps is one of them. Kevin Martin was another. Ms. (Kathleen) Adelstein was another one.

"And these were all held in the past couple of months so it's fresh on their mind. They know where we're coming from. That's what the league has been doing on a direct basis rather than just file a written petition or comments, which we did."

--

Haynie also credited the direct lobbying efforts aimed at members of Congress - many of whom look favorably on the Amateur Radio service.

--

Jim Haynie, W2JBP: "They've made their feelings known to the commission and while they support inexpensive broadband for America, you know, on the other hand they understand the infrastructure that's involved with Amateur Radio and public safety," Haynie says.

--

Finally, while Haynie says he'll reserve additional comment until reading the full FCC document, he feels some sense of relief at what finally emerged.

--

Jim Haynie, W5JBP: "I know there's some detractors out there that for whatever reason think the league probably lost and sold them down the river. And that's not the case at all," Haynie says. "When we look at what happened at the commission meeting and actually read the details of the report and order, I think what the league has been doing for the last couple of three years will be quite evident.

"So I think we did a good job. Did we get what we want, no - not entirely. But we also knew going in that you can't just say: 'I don't want BPL at all.' It's going to be done in some form or fashion, now the only question is how much?"

--

Over at CQ Magazine, Editor Rich Moseson, W2VU, is feverishly studying what the FCC has done and what impact it will have on Amateur Radio.

He tells me the FCC's press release on the subject seems to contradict the commissioners' assurances that interference mitigation should be done in a timely fashion.

Moseson notes that in the same sentence such resolution of interference problems would be done without disruptions of service to BPL subscribers.

--

Rich Moseson, W2VU: "So, in other words, the users of this non-licensed service have priority over licensed users," Moseson says. "This is what we were afraid of to begin with."

--

Moseson says he's also concerned about the closing comments of FCC Chairman Michael Powell that were not included in the public statement released on the commission's website.

--

Rich Moseson, W2VU: "He starts out practically pandering to hams and then turns around and tells us not to stand in the way of progress," Moseson says.

--

While sounding pessimistic, Moseson says we'll have to wait and see what's in the actual FCC report and order.

With my colleague, Paul Courson in Washington, I'm Mark Abramowicz, NT3V, in Philadelphia.

--

By the way, you'll find the audio comments made by some of the commissioners as a Web Extra feature. You can find them by pointing the browser on your computer to our website, www-dot-arnewsline-dot org. (ARNewsline (tm))

**

THE BPL FIGHT: IEEE READIES BPL STANDARD

The Institute of Electrical and Electronics and Engineers -- thats the IEEE -- it has begun to develop standard 1675 for Broadband Over

Powerline hardware.

According to immformation at the organizations website, the scope of this standard will be to provide Utilities and Manufacturers standards for the commonly used hardware for BPL installations. Also to provide standard installation, maintenance and operation methods to ensure the safety of both Utility and Non-utility personnel working on BPL equipment.

This project will not cover data transmission, protocols, or other aspects of BPL related to the internal workings of this technology. More information is on-line at http://grouper.ieee.org/groups/bop/ (IEEE)

**

THE BPL FIGHT: HAMS AND CB'ERS UNITE - DOWN UNDER

Still with Broadband Over Powerline issues, word that ACREM, the Australian Citizens Radio Emergency Monitors, have joined the fight against B-P-L. WIA Newsman Martin Howells, VK2UMJ, reports:

--

Following reports that the ACA may be considering the removal of interference protection for some HF radio users, ACREM New South Wales forwarded an official written protest to the ACA, the Minister for Communications, the Shadow Minister for Communications, and the leaders of both major political parties.

This was followed up with a further submission lodged by e-mail outlining the Japanese report that showed interference from BPL as high as 300 MHz. Although ACREM is primarily a CB emergency monitoring group, the interests of all radiocommunications users, including amateur operators, is also a concern especially given the potential safety-of-life issues of widespread interference to HF and VHF frequencies. ACREM New South Wales will continue to play an active role in the BPL fight, alongside the WIA and other groups.

This has been Martin Howells, VK2UMJ, for WIA National News.

--

Asn B-P-L looms in more and more places, users of many radio services are banding together to fight it. The joint efforts of hams and CB'ers in Australia is just one example of what's happening, worldwide. (WIA News)

**

ENFORCEMENT: $10,000 FINE AGAINST JACK GERRITSEN, Ex-KG6IRO, AFFIRMED

The FCC has affirmed its earlier tentative fine of $10,000 against unlicensed Los Angeles area radio operator Jack Gerritsen, the former KG6IRO. This for operating radio transmitting gear after the agency

set aside his license.

As previously reported, on June 15th of this year the Commission's Los Angeles Field Office issued a Notice of Apparent Liability for Forfeiture to Gerritsen in the amount of ten thousand dollars. This, for Gerritsen's apparent, willfull and repeated violating of Section
301 of the Communications Act by operating a radio station in the Amateur Radio Service without authorization from the Commission to do so.

Gerritsen sent in a response to the notice on July 13th. In his filing Gerritsen claimed that he has a valid amateur license that permits him to operate on all of the radio frequencies detailed in the Notice of Apparent Liability and that that the FCC's earlier action to set aside of his amateur license and KG6IRO call sign was unfounded. He also claimed the set aside did not prohibit him from transmitting on the amateur radio bands given his claim that his amateur license was valid. Also, that any possible suspension of his license is also pending a hearing before an Administrative Law Judge and that it makes the Notice of Apparent Liability moot until any suspension occurs.

Well that might be Gerritsens interpertation of the FCC's decision
but its not shared by the agency. In affirming its decision to require him to pay the ten thousand dollar fine the FCC says that Gerritsen has no license. Just a pending application. Therefore there is no license for the Commission to suspend that the correspondence sent to Gerritsen from the FCC informed him that his amateur license had been set aside. As such the FCC did not grant him an Amateur license nor any authorization to use the amateur frequencies.

In closing, it found that Gerritsen is fully liable for a monetary forfeiture of in the amount of ten thousand dollars. It gave him 30 days fropm the October 5th release of its decision to pay. If he fails to do this in thr alloted or the FCC says it may be referred to the Department of Justice for collection. The full story is on line at http://hraunfoss.fcc.gov/edocs_public/attachmatch/DA-04-3183A1.doc (FCC)

**

ENFORCEMENT: TO MANY CALL SIGN CHANGES

The FCC wants to know why a California couple has been requesting and then cancelling call signs. The agency's Daryl Duckworth, NN0W, explains:

--

Duckworth: "NN6AA, Edward Beluso, of Redding, California, has
been
asked to provide information on about a dozen licenses that have been
granted and canceled since June of 1999. These filings raise
questions as to whether these are being filed in order to block
future assignments of the call signs and the legitimacy of those that
were issued for clubs.
At the same address, WA6JAN, Janet Beluso, has also been asked to
supply information regarding five call signs."
This is Daryl Duckworth, NN0W, reporting."

--

The FCC gave the Beluso's the usual amount of time to respond.
(FCC,
RAIN)

RESCUE RADIO: KKOB TOWER HIT BY HOT AOR BALLOON

KKOB-AM radio in Albuquerque, New Mexico, had to shut down its 50,000-
watt transmitter for several hours on Sunday, October 10th. This,
after a hot air balloon got tangeled at the top of the stations 700
foot high broadcast tower. Amateur Radio Newsline's Norm Seeley,
KI7UP, has more:

--

According to news reports, Bill Chapel was flying the hot-air balloon
when it blew into the tower near a park where the Albuquerque
International Balloon Fiesta was being held. The lines supporting
the airships canopy got wrapped around the triangular shaped tower.
This left the gondola resting up against the antenna structure with
the straps securing it to the balloon tangled in the antenna
structure.

Chapel, and passengers Aaron Whitacre, 10, and Troy Wells, 14,
successfully got out of the gondola and onto the tower. They then
began the long climb down the antenna structures ladder.

At the 100 foot level they were met by a group of trained rescue
worker. The rescue team secured the trip with safety gear, and
helped them into a utility truck bucket for the last of the trip back

to mother Earth. Tower maintenance crews then got to work removing the remainder of the balloon from the antenna structure.

Nobody was hurt in the incident and the station resumed normal operation once the remnants of the balloon were removed.

For the Amateur Radio Newsline, Norm Seeley, KI7UP, in Scottsdale, Arizona.

--

The Federal Aviation Administration and National Transportation Safety Board are reportedly investigating the incident. The Albuquerque International Balloon Fiesta has been flying since 1972. (Published news reports)

**

RESCUE RADIO: WAYS TO WARN

Scott Marks, KI4GGU, says via the WIA News that Israel has developed an emergency public notification system called Silent Radio. This is a regular FM station that remains silent until some kind of emergency situation takes place. Once it receives an alert, it takes to the air to issue any required information to the Israeli public which already knows where to tune in. Kind of the the old Emergency Broadcast System we had here in the U-S-A before the 1990's upgrade
to E-A-S that is supposed to warn a lot more people but is also requires special decoding equipment and is very complex. (WIA News)

**

RESCUE RADIO: WAY NOT TO WARN

Meantime, over in the U-K, Bob Sayers, G8IYK says the Emergency Planning community in the that nation has tried to have something like the Israeli alert system established for many years. Unfortunately, they always get the same response from government officials ewho say that it would be prohibitively expensive.

In fact not so long ago the nation-wide warning siren network, set up in World War 2 but retained and improved upon throughout the Cold War period, was scrapped. The reason was the same. No money to maintain it. (WIA News)

**

ON THE WEB: NO MORE FREE E-MAIL OFF-LINE CLIENT RIDE

If you are a user of Juno's no-charge e-mail service, part of your
free ride is coming to an end. This as the Internet service provider announces that as of December 1st free members will be required to use webmail to get and send e-mail. In other words you will need a

web accoumt someplace else to use Juno e-mail.

This change only affects Juno Free members who currently download e-mail to their computer using Juno software, Outlook Express or other "offline" e-mail clients. These changes to Juno e-mail will
not affect Juno SpeedBand, Platinum, or MegaMail members or Juno Free members who already read and write Juno e-mail exclusively on the Web.

According to a release from the company, to continue being able to use an off-line client with Juno e-mail current free members will need to upgrade to one of Juno's premium services. More information
is on line at www.juno.com/emaildiscount. E mail discount is spelled as one word. (Juno press release)

**

THE SOCIAL SCENE: PACIFICON IN OCTOBER

Turning to the ham radio social calander, Pacificon, the 13th annual ARRL Pacific Division Convention is happening as this newscast goes to air. The venue is The Mariott Hotel in San Ramon California. Those attending will probably get a first hand report on the FCC decision on B-P-L that took place on Thursday the 14th. (Worldradio)

**

THE SOCIAL SCENE: MICHIGAN IN NOVEMBER

And Michigan's Holland Area Amateur Radio Club is hosting the State
ARRL Convention again this year. The date is Saturday November 6th. Talk in will be on the K8DAA 147.060 Mhz repeater that requires CTCSS access tone of 94.8 Hz (E-mail)

**

BREAK 3

This is ham radio news for today's radio amateur. From the United
States of America, We are the Amateur Radio Newsline with links to the world from our only official website at www.arnewsline.org and being relayed by the volunteer services of the following radio amateur:

**

RADIO HEALTH REDUX: IS THERE A CANCER CONNECTION TO HIGH POWER RADIO TRANSMISSIONS

A follow up to last weeks story on the risks associated to R-F exposure from living near a high power broadcast station. Bob Gonsett, W6VR, points a report in his C-G-C Communicator that discused the same subject. Amateur Radio Newslie's Bruce Tennant,
K6PZW, reports:

--

Two years ago an Italian study found death rates from leukemia increased dramatically for residents living within two miles of Vatican Radio's powerful array of transmitters in Rome. Now, as reported last week, Wired Magazine says that Korean researchers have looked at the death rates in 10 regions with AM radio transmitting towers broadcasting at more than 100 kilowatts. They compared them with control areas without transmitters, and claim to have found substantially higher cancer mortality rates among those who lived within two kilometers of the high power transmitters.

But says the CGC Communicator, the problem with the Vatican study is that it was relatively small in the size and lacked exposure data. Also, the new Korean study has not even been published. As a result, this is all speculative and based on some rather sketchy pre release information.

Clouding the picture is the statement of Epidemiologist Mary McBride of the British Columbia Cancer Agency also reported in Wired magazine. It quotes Mc Bride as saying that there have been many studies like these, and they just are not very convincing.

For the Amateur Radio Newsline, I'm Bruce Tennant, K6PZW, in Los Angeles.

--

The bottom line to all this. Its going to take more than just scientific speculation to know foe certain if there is any affect at all from living close a a high power broadcast transmitter. (CGC)

**

RADIO ON THE NET: NEW 2 METER SIMPLEX REMAILER

Interested in 2 meter simplex operation? Well you might want to join a new remailer and discussion group in cyberspace. Located on the popular Yahoogroups hosting service the sponsores describe the new remailer as one for everyone who is a ham and who has a two meter rig of some sort laying around and a lot of time not being used much of the time.

Through the group you should be able to set up contact attempt schedules with other members. If your looking for a way to put that 2 meter fm rig of yours to good use go to http://groups.yahoo.com/group/2fmsimplex and sign up. (Repeater Reflector)

**

NAMES IN THE NEWS: AMSAT ELECTIONS RESULTS ANNOUNCED

Some new names and some old will be running AMSAT North America the next year. This, with word that Rick Hambly, W2GPS, has been elected President of the Amateur Radio space authority at the organizations October 7th Board of Directors meeting.

Hambly replaces Robin Haighton, VE3FRH, who has headed up AMSAT North Ameriuca the last seveal years. Also elected or re-elected are are Lee McLamb, KU4OS as Executive Vice President, Mike Kingery, KE4AZN as Vice President Operations, Stan Wood, WA4FNY taking the task of Vice President of Engineering, Barry Baines, WD4ASW as Vice President Marketing and User Services, and Frank Bauer, KA3HDO as Vice President Human Sapceflight. Gunther Meise, W8GSM, will be taking the Treasurers spot for the coming year as well.

Also at the meeting status reviews were presented of several undertakings. These including ongoing projects such as the Echo satellite and the launch of future hamsats including Eagle. The Board also had continuing discussions on regulatory matters, most importantly the impact of FCC Report and Order 04-130 which deals with the subject of Orbital Debris. (ANS)

**

RADIO IN SPACE: MESABA THE IRANIAN SATELLITE

SpaceDaily reports that Iran intends to launch its first satellite in April 2005. The bird named Mesbah is said to be a tewenty in square cube weighing in at 132 pounds.

Plans are to put it int a Low Earth Orbit at about about 560 miles. The satellite will be used to identify natural resources, control the nations electrical and energy network and can also be used by communications and crisis management teams the press reports said. (ANS)

**

WORLDBEAT: SA HAMS DID NOT LOOSE 2.4 OR 5.6 GHZ

South African Amateurs have not lost access to either the 2.4 and 5.6 GHz band. Its just a government typo. At least thats what South Africa Radio League president, Graham Hartlett, ZS6GJH, is saying ane he should know. Thats because he set out to investigate why both pieces of spectrum were not listed to that nations ham radio community.

Now Harlett says that he has in hand a communication from the nations radio regulatory body. It tells him that the 3.4 and 5.6 GHz allocations for amateurs had been accidentally omitted from the last publication of the band plan in the Government Gazette. Harlett was assured that this will be rectified in the next band plan

publication. (WIA News)

**

SPECIAL EVENTS: KØAIR/KØGRL TO CELEBRATE VETERANS DAY

To recognize Veterans Day and the birthday of the legandary General Curtis E. LeMay, the Strategic Air Command Memorial Amateur Radio Club will be operating K0AIR and K0GRL on Thursday, November 11th. The stations will be on the ait 1200 to 2400 hours UTC in the general phone bands on or near to the following frequencies ending in 47. Thhis 3.947, 7.247, 14.247, 21.347, and 28.347 Mhz depending on propagation and time of day. Six and two meters will also be activated 51.47 and 146.46 Mhz. For QSL information please visit www.sacmarc.org on the World-Wide-Web.

**

DX

In D-X, word that a group of seven German operators is active from the Chesterfield Islands for eight days beginning about the 16th of October depending on weather conditions in the area. The Chesterfield Islands are located between Australia and New Caledonia. Once on the air, activity will be on 160 to 6 metres using CW, SSB and RTTY. The callsign will not be announced before operations start. QSL as directed on the air. (OPDX)

And YT1CS is active portable 5Z4 from Kenya until 18th of November. He orks only SSB on 20 and 15 metres. Previously he was signing the rather convoluted call of 5Z4YT1CS until the Kenyan licensing authority re-inserted the 'stroke' mark in the callsign. (RSGB)

Lastly, seven operators from Germany and Poland are active as TJ3SP and TJ3FR through October 20th. They have four stations on all bands and modes, except 160 and 6 meters. These two bands are not licensed for use in Cameroon. (OPDX)

**

THAT FINAL ITEM: THE HISTORY OF JOTA

And finally this week, its the time of year for Jota -- the scouts annual ham radio Jamboree on the Air. Last week we told you about the event as it is today. Now we take a look back in time to the beginning of the Jamboree with John Williams, VK2BUI.

--

Jamboree On The Air is the largest annual international event in the Guides and Scouts event calendar, when thousands of Girl Guides and Scouts from all over the world gather for a weekend to contact each other by radio, share ideas, participate in many activities, make friends and learn new skills.

Like a lot of successful ventures, JOTA had a small beginning, and whilst Scouting utilised radio in its program in some areas for a number of years, it was not accepted as an official part of the Scout program until the 1957 Jubilee Jamboree at Sutton Park Coldfield, near Birmingham in the United Kingdom.

It was here that a very successful amateur radio station was set up, but amongst the sixty plus operators present, only two were in uniform, one of whom Mr Les Mitchell G3BHK.

As this was the only activity at the Jamboree not conducted with a full Scouting Staff he was rather disappointed, feeling that in the true spirit of such a wonderful international Scout activity all Scouters should have been involved in the manning and operation of this station.

His concern led him to call a meeting of overseas Scout radio Amateurs present at the Jamboree and during one of their meetings they decided to keep in touch with each other on air and ensure their availability, if possible, as station operators at future World Jamborees.

Initially one day a year was proposed, but thinking this over later Their nominated Organiser Les Mitchell suggested they consider inviting amateur radio operators throughout the world to join them instead in a special weekend each year for a Jamboree on the Air at which, hopefully, Scouts and leaders would be able to talk to each other throughout the world

Me too. FYI, went to Radio Shack in Sunnyvale, CA on
Sunnyvale-Saratoga road. Told clerk I didn't have printer so I
couldn't print out the $50 coupon. I asked if he could honor the
price. He said "No way! I'd get fired!" I asked if I could talk to a
manager or anyone who may be able to approve it. He said "The manager
couldn't approve it either." (Anyone who's spent any time in Cust.
Service knows you NEVER say that - tell the person you will get the
manager). So I said Thanks and left. Went a few miles up the street to
the Mountain View (El Camino / San Antonio) RS, and the Asst. Manager,
Aaron, happily printed it and gave me the sale price.

Some employees don't know where their paycheck comes from.

Here's some freqs for you to plug in today if you are in Florida. Or hang
onto them if JSTARS flights come into your area some day.
It is 1:38pm EDT (1738z) and STRIKESTAR is up with ANTIDOTE and Avon
Control on 264.625, preparing to work with MAKO 11 flight. 264.625 will be
coded as "TAD-12."
StrikeStar has instructed Avon to advise MAKOs to come up on 355.25 when
they are done dropping their inert ordnance and ready to work with the ground
party (ANTIDOTE 40).
I am also hearing comms from StrikeStar to Northrop Grumman JSTARS Ground
Station "Star 1" on 225.725.

It is 1:51pm EDT (1751z), and StrikeStar has advised Avon Park Range that
their primary freq for working the MAKO 11 flight will be 388.225.

Most local discount stores (Kmart, Wal-Mart, etc.) get theirs via satellite. Local grocery stores get theirs via the local cable company (the digital music channels offered via the digital receiver). Cable company gives them a special deal if all they are using is the audio services, and not the regular cable video channels.

That's how it works locally, your area may differ...

Just a thought here, but did you drill any holes in the pipe to insert the wire into before soldering? My thinking is that if the wire is just soldered to the outside of the pipe (without any other means of holding the wire attached to the pipe,) that should a lightning strike ever happen, the intense heat from the huge amount of electrical discharge may just melt the solder and allow the wire to become detached from the grounding pipe. This would effectively make the whole setup useless...

Soldering is a good idea, however, there should be another means to insure that the wire remains attached (as long as possible) should the solder melt...

Is 121.500 used for voice as well as other traffic? I know it is for aircraft distress, and sometimes I have heard very faint voice on it, but this may be an image or some sort of intermod. As the sound is so faint, I cannot understand the transmission even with the volume on my scanner turned up full and using headphones. I live in Calgary, Alberta, Canada.

TBH if the lightening is so strong that it 'could' melt solder (more like blast it!) nothing is going to stop it, the copper pipe will evaporate anyway. so i think it's a be immaterial! (pun intended!)

just whilst on another old wives tale, don't forget if you do run around disconnecting coaxes to radio & things during an electrical storm....don't just reconnect them after it has passed by..you stand more chance of damaging things that way as the coax will be holding quite a nice charge, just waiting for you to discharge it through the radio when you reconnect! get a nice block of metal or dexion or WHY and mount the opposite gender connector to it and then short all centre & outer pins, then ground that to a water or radiator pipe (as long as it is metal!!)

that's another good way of grounding the radio in the shack also, i found my radiator pipe had a better impedance than my earth stake!!

Sorry, but I learned this the hard way too...the micro-pro lost it's mind. I'd recommend you re-set the unit as per manual. As on some Alinco units, you may be able to "re-set" the CPU without disrupting your pre-progged memory. At very worst, you'll have to re-program the radio - but it might be worth a try.

My credentials? I'm no radio expert, but I've worked with cpu devices for about 20 years. Sometimes a simple 're-set' / Power Cycle / or cold re-boot make every problem go away.

Good luck,
Mike T.

Well, let's see...there are several packages listed on the Strong
Signals software page that *may* fit the bill...the URL is:

http://www.strongsignals.net/access/content/software.html

Where available, the page also lists Yahoo support groups for the
software and reviews.

These packages explicitly state they support the R8500:
Spectrum Commander
Deltacomm
Frequency Manager
Radiomax ***one of my favorite weapons of choice for researching
frequencies
Radio Control
TRX Manager

These packages say they support 'most Icom with CI-V protocol' or
similar:
Radioctl
Radio Manager (old version)
Scan Manager

No doubt I missed a few, but this should get you started. If you
find a package not listed on that page, let me know so it can be added.

If one was interested in listening to the SCA, what is the way to do it? I have heard you can feed audio into a SWL receiver and tune it that way, but it doesn't make any sense.

Anyone like the musc in Home Depot? I can't stand the Depot, but their music is awesome!

Simple answer -- follow the money. Easier by far to nail the
user who can't support a court battle against either the government or
the manufacturer.

It was on the local news here about the yelling and distressed Toshiba TV. It seems that Toshiba has offered the guy a new TV but no word on what caused the problem. One would think that if it was a design flaw there would be many more showing up on the beacon but no stories like that yet. With all the publicity showing up (The story was also on CNN) I am waiting to see the damage control from Toshiba to get their sales back on track.

Ciao,
Falcon

You can get radios capable of receiving SCA's. To use a SW receiver to get them, you have to be able to tap into the un-altered detector output of an FM radio, and, be able to tune to a band of frequencies between 52~92KHz.

I have a couple of pocket FM radios with SCA that I was given, I could sell one for a few bucks, if you're interested. They tune the regular FM signal, plus the two most widely used SCA frequencies, IIRC..

How much do you guys want to bet that
someplace on the Toshiba TV are those
inevitable words of warning: --> "MADE IN CHINA".

(no doubt having a UL and a CSA and an
FCC Part 15 Certification also..??)

Want to have some real fun? Try this!! (below)

If you own a "whitebox" computer [..meaning one
of those cheap cobbled-together Chinese Component
computers you get at the monthly PC show from
Hoo-Fong Voo who just got off da boat from
Chunking or Saigon], set up a Spectrum Analyzer
about 10 feet away with a rubber duck antenna
on it in capture mode. Pull off the cover of the PC
and fire the sucker up and have a look at the S.A.

It will throw off more stray RF crap than a
GE Microwave Oven or Brother RG Stair on a
rainy day on the short-wave... How the heck do these
things make it into the USA consumer market and get
sold? (most of em have counterfeit FCC and UL
symbols silkscreened on the motherboards, ever
notice that? The switching power supplies in these
things are nothing short of a firetrap also)

OP cited the article that showed that the manufacturer replaced the set as
soon as they heard of the problem, and are certain to figure out what
happened and hence prevent it happening again. What else is wanted here? No
one got nailed and all lived happily ever after.

Ken

first find out if there is any SCA in your area. I bought
the Ramsey SCA converter and fm receiver kit that mates to it
to hear local SCA. in my town there is a FM station on
" every " channel available on the radio. (so much so that
you can't find a open freq to run a Roady II xm radio on ,
rebroadcast wise)

I found that even with all these local fm stations , there is
no local SCA being broadcast in my area and wasted my
money and efforts.

Ramsey electronics has inexpensive SCA / fm receiver kits
to help you get SCA if it is available in your area.

I'm wondering if I have the formula down correct..

Scanner with a plug in 1000 mah charger. 4 2300 mah batteries. 4 * 2300 = 9200 mah. 9200 (total mah of batteries) / 1000 (mah rate of charger) = 9.2. So 9.2 hours? Am I using the correct formula?

Thanks. :)

Evan

Source record: 17658

i would doubt that the size of the charger capability has anything to do
with actual charge time.
the scanner should have an internal constant current charge circuit, the PSU
is just a supply to the scanner.

i would expect the charge current to be about 50mA to the batteries, so go
from there (you are correct with your formula)
capacity/charge current=hours needed)

it is quite common for the chargers in scanners to never fully charge NiMh
batteries, (i assume that's what you have.)
it won't harm the scanner, nor the batteries as such, but don't let anything
get too hot, particularly the cells.
if they do, life will be severely restricted.

use an external charger.

mike

Gidday, what's your opinion of GI Joes (used to be CB Joes I think) I ordered a BC785D of them 6 weeks ago, came via airmail about 8 days after the order.
Then I ordered 2 more on the 28th of September, this time their communication (or lack of) is shocking, I can't get an answer on whether it has been sent, if it will be sent, how long it will be etc. After 6 emails I have only had 1 reply saying they will "look into it"
Has anybody else had dealings with them?
Should I push harder? Should I tell them to go take a flying f*ck and order another couple from somewhere else?
Can anyone recommend a good online store that will send to New Zealand?
TIA

I have a pro-95 and didn't see this anywhere in the manual (if I missed it, please LMK!). I see the ID Hold feature - great for if you hear a good call or incident and want to monitor it. But say I have a system programmed in, and 15 groups and the group is in closed mode. How can I go through each talkgroup? i.e. the equivalent of manual mode on a conventional system? I want to scroll through the list of talkgroups and then find the one I want - not have to wait for it to come active.

Thanks. :)

I used to have a mod book for my Pro-2006 scanner. I installed the LED S Meter mod, but i had to remove it because of sending the radio in for warranty work (which i drilled and installed 5 red and 5 green LEDs on the front) I cannot find my book and i have had this disconnected for a couple of years AND I WANT IT BACK. Does anyone have access to this information that shows how to connect my wiring back up? If so can copy me on it? I can give you more information if it will help.

Thanks

Bo Harris

Not quite. A simple estimate of charge time for a completely discharged battery is:

Charge Time = Battery Capacity / Charge Current

The current rating of the charger is (probably) NOT the charge current--that is controlled by whatever circuit feeds the batteries. All the batteries are charged with the same current (they are connected in series in the scanner), so you do not have to multiply the capacity by the number of batteries. The charge current with the batteries in the scanner is not likely to be terribly high (<100 mA), so it is quicker to charge high capacity batteries with a smart charger that uses a high current initially, then switches to a lower current when the charge is complete. Also remember that the batteries aren't generally fully disharged, so the charge time to replenish them is less than the calculated time. The suggestion made in another reply to charge overnight is a good one.

> 2300 = 9200 mah. 9200 (total mah of batteries) / 1000 (mah rate of
> charger) = 9.2. So 9.2 hours? Am I using the correct formula?

Batteries are usually in series. The current is the same in a series circuit. If the charger is a constant current charger (which I would be surprised if it was) the charger would be putting out 1000 ma and it would take just 1 X 2300 devided by 1000 for a total of 2.3 hours . Then you have to allow for about a 10% overcharge time as slightly more power is put back in the battery than taken out. BTW I am asuming the charger is rated for 1000 mA and not 1000 mAh.

>have empty banks this shouldn't be a problem.

Oh wow.

Time to return the 95.

Just kidding.

That's a shame. Great radio otherwise!

Ok 2 more questions: There's banks (100 channels per) then there's TG
banks of 20 talkgroups. I can't seem to see a way to scan only that 1
talkgroup bank - is this what you're referring to? or actual banks?

Now here's the interesting questions - the 95 will do control channel
only mode which is great. Can I put multiple control channels in the
same bank? Now I realize since there's only one list of talkgroups for
the radio, if say on system 1 talkgroup 12345 is the Police which I
want to listen to but on system 2, talkgroup 12345 is the dog catcher
which I could care less about, it would stop on that talkgroup. But
would this work?

I'm guessing it wouldn't as based on an experiment I just did, if
there's traffic at all on the control channel, even if it doesn't
match any ID"s in the list, the scanner listens. I put a WX channel in
the same bank, and it took a while before it picked it up.

2618. Icom IC-R20 Programming Comments

Newsgroup: rec.radio.scanner
Date: 2004-10-20 00:39:35 UTC
From: consigliori <brltigersnospam@cox.net>
Message-ID: <dtidd.15086$0j.14152@lakeread07>
Source record: 17683

Since my last post regarding my R-20 I have sat down and programmed both frequencies and labels for about 200 channels. Here are a few observations for anyone who is interested:

Programming the R20 is different than any other scanner I've owned. Excluding Scan Edges, etc.. you basically have 1000 memory channels that you can arrange into 27 different banks of UP TO 100 ch. per bank. As for myself, this was difficult to get used to because of the way all of my other scanners were programmed (i.e. you identified a freq and programmed it into a specific bank/channel). With the R20, you program your memory channels and THEN assign them to a specific bank/ch. number.

For Example. Let's say I have 20 police freq's, 15 fire Freq's, and 10 Public service Freq's I want to program. With my other scanners, If I wanted to have a different bank for each group (let's name the bank's POLICE, FIRE, PUBLIC), each group would reserve X amount of channels (usually 50 or 100) per group regardless of how many channels were programmed. In the past I have had to mix what I consider different Freq's (i.e. Police/Fire) just to take advantage of the total number of memory channels my scanner had. The R20 has made significant changes in the way that memory/bank/ch. are assigned and once I got used to it, I loved it.

The first thing to remember with the R20 is that you have 1000 memory channels that are independent of the bank/channel system used by most scanners. Here is an example of how I would have programmed the above into my radio (keep in mind that ICOM's channel's start with 00 not 01 but I start programming with 01).

ICOM Memory Channels 1-20 - Police
ICOM Memory Channels 21-35 - Fire
ICOM Memory Channels 36-45 - Public Service

At this point all freq's are programmed into the scanner, but not yet assigned to individual Banks/Channels.

At this point I do the following:
Identify Bank A Label as "POLICE"
Identify Bank B Label as "FIRE"
Identify Bank C Label as "PUBLIC"

Now, once I have identified each bank (A, B, and C) I then go back and ASSIGN memory channels to each bank/channel. For example, I go to ICOM Memory Ch. M1 and then assign it to Bank A ch. 1. Memory Ch. M21 is assigned to B-1, and Memory ch. M36 is assigned to C-1 (and on and on). Whats important to remember is that even though you have assigned a memory channel to a Bank/Ch#, the Memory channels do not change. In other words,

Even though you have assigned all of your bank/channels, the radio still holds all of the freq's in their original Memory format. Once you have assigned the memory channels, you can then go back and add labels.

I have found this to be very useful when changing my mind on how a freq should be stored. For example, Lets say you programmed a frequency for your local AIR MED and initially assigned it to your "FIRE" or "POLICE" bank and after the fact, you decide to have a dedicated "Medical" bank that you think would make more sense to have the freq. The way the R20 is setup, all you have to do to change this is go to your Memory settings (remember, they do not change) and just Re-assign the freq to whatever bank/ch. you want

The best part of all of this is that if you assign 20 police freq's to Bank A; CH1-20, Bank A will only take up 20 of your 1000 memory channels. With 27 Banks to work with (banks A-Z) the ability to customize your banks/ch.'s exceed any other scanner I have worked with.

Again, these are my novice observations of the R20. Hope this information helps.

Regards,
David

Free online audio streaming of various public safety and EMS
channels are availible at www.HRConnect.com

This includes Virginia Beach, Hampton, Portsmouth, Chesapeake,
Norfolk,
Suffolk, and Newport News.

Also availible is Norfolk Int'l approach as well as some other feeds.

There are two JavaRadios also availible, but undergoing some
maintenance (multiport serial card issues I believe).

Just a heads up, enjoy.

Sorry, no current hurricanes.

There are a bunch of different services. One was called DMX or Digital Music Xpress. Our local cable company offered a cable version that had 30 channels, most of it was popular music (normal songs, no commercials). Similiar to Digital Cable Radio services.

They offered a satellite delivered service for businesses. Instead of the standard 30 channels, there were 90 channels. In the extra 60 were lots of "elevator music" feeds. I'm not sure if they were grouped into moods, or marketed for psychological shopper warfare... you know, the songs that supposidly make people buy stuff followed by songs that will help move them out of the store...

I'm not sure if the service is still flying, but it used to be slick. The DMX terminal (made by Scientific Atlanta) had a remote control that featured a 2 line LCD screen. You could retrieve the song info about the current song playing... Artist, album, song title, etc.

Muzak has a sat service.

Then there are SCA audio feeds.

I believe some of the stores use time on DirecTV and Dish for their in store programming. Our local walmart has plasma TVs hanging over the lobster cooler or some such... gotta love it. Supposidly each store costs tax payers about $700,000 in handouts because they pay their employees so low (6.6 bil profit a year too)... yet they hang plasma TVs in stupid places to try to advertise who knows what. 8000 hour life, burn in risk... gotta love it.

Aah yes, but if the media hadn't got hold of the story, the poor guy would be sending it back and forth, at his own expense, trying for a warranty repair, and running a serious risk every time the tv came back and he turned it on.

Brad.

I just got one yesterday. It will make a good travel scanner with it's
various features.
What I was wondering about is: The "demo" software they give you only lets
you save to bank 1.
I went to Unidens site and couldn't find how to purchase the "uncrippled"
version. No mention of price either. I did a Google search
and didn't find any other software for it either.

Hi,

Just bought new one using the $50 coupon available on the internet.

Looking for advice & opinions on best software to work with the RS PRO-95 scanner.

Also what package to get frequencies for local area, rural South Carolina.

Thanks in advance,

John

For software go to www.starrsoft.com and get win98 (works for me) and the cable can be found at www.balckbagsoftware.com.

I don't think Radio Shack caries either the cable of software anymore.....

Hello Group: I would love to hear everyone opinons on which Handheld Scanner I should purchase? I am kind of new to scanners although I have an old Cobra 100 channel (20 years old) unit that I use for police. I am a little confused about all the new technology like trunked radios which I admit I don't know anything about. If I had a budget of about $ 200.00 , which radio would I get the most bang for my buck? I want a handheld radio thats going to give me good reception off the handheld antenna (rubber ducky) and again what are trunked radios. Thanks for any insight you can give, John

Hi all, I have a Pro-2004 and when I program a frequency, say 460.050 for our local police, I get 460.0516 on the display. Also, if I punch in 45.000, I get something like 76.5295. I know there were some Pro-2004's with bad solder joints but the problem only came up recently. Can I have a bad RAM chip? Has anyone else ever expeienced this as well?

True indeed. But c28k@ (blah blah) was acting like someone had been really
really naughty, whereas it wasn't the case. Anyway, I bet if it went to a
repair shop for repair the fault could be repeated pretty quickly, and been
repaired soon after the Coast Guard left the room. :-)

Sonic frequencies (440 hz = A4)

13.013 hz = G#-1 + 2 cents (approx) This might be the "shit your pants
frequency" or fabled "brown noise".

130.13 hz = C3 -9 cents

1301.3 hz = E6 -23 cents

13013 hz = G#9 - 36 cents - still way within the threshold for human
hearing.

This proves that "Bob" may make you shit yourself, but he still definitely
wants to be heard.

I also saw the coupon and along with my $25 gift certificate to a local mall with a RS store, got that PRO-95 for $125! Very pleased and that WIN95 software is pretty good. I am able to use my Yaesu cloning cable (FT-50) and the stereo to mono adapter with no problem. Had it scanning the local PD and FD (Motorola II) in 5 minutes. Very impressed.

In Eden Prairie, MN (near Minneapolis), way back in the '90s, I used to be
able to hear one or two Muzak feeds on my scanner in the 950 MHz area.

Anyone else know any other cities where Muzak used to be transmitted this
way?

For South Carolina information, I would definitely register with
RadioReference as a previous poster suggested, and get on the South
Carolina forum. I'd also look at:

http://members.tripod.com/stickers_/frequencies.html

http://www.qsl.net/kc4oxt/

I'd also look at the Yahoo groups listed in kc4oxt's 'links' section.
You might turn up more info there, too.

Anyone here have any experience with the new Bearcat that has the near field freq counter in it? I think it's the 246? Am an over the road trucker and thinking this is the scanner to have when I am in unfamiliar territories and wanting to scan when I'm parked and out of hours and bored out of my skull and not having frequency information. Any replies and or reviews and or suggestions appreciated.

Thanks!

2659. Re: Anyone here have a BCT-8?

Been looking into that scanner, as well. I am a trucker looking for a good travel scanner and this one sounds good, except I am often in a position where I am parked in an unfamiliar area without freq information and having to park for 10 hours when I am out of drive time. Leaning more toward the 246 with the near field freq finder feature, thinking it would be more of an asset when I have no information and can simply search for transmissions while parked. What do you think? The BCT 8 is nice for travel, yes, but would be a pain for me to stop and reprogram all the time and have to search out frequencies. Still undecided here, but will be making a decision soon...

Go to your local Radio Shack.
Ask them if you can hear the local public service on the Pro-95.

If they say yes, Buy it, and have them program it.
If they say no, save your money for a Pro-96.
If they they say they don't know, go to another store.

Uniden owners please insert comprable model numbers,

Most people won't answer your trunked radio question because
it is something you need to read up on your self from the many resources
avaialable on the web and or else where.

Note: Radio Shack has the police call frequency guide (with the entire
nation on CD) on sale for less the $10. It has an excellent introduction
to
trunked radio etc... in the front matter.

Hi all

Iï¿½m trying desperately to locate a cable to connect my Uniden UBC245XLT to my PC.

Uniden Australia aren't of much help. They tell me itï¿½s a discontinued product and as such they wash their hands of it.!!

I've hunted and hunted to find one - with no success!!!

Itï¿½s so hard to purchase quality items in Australia ï¿½ particularly Tasmania!!

Iï¿½d be so grateful for any advice please.

Kindest regards

Frank McIvor

Actually, you do have several options. Probably the best among them
is to find out if the area(s) you frequent have Yahoo groups associated
with them. Even better would be to select a program or scanner, and ask
if folks have frequency file(s) for the areas you need. That way you
could build a library with hopefully most everything you need - that
way, all you need do is reload when necessary.
With newer software coming out for the BCT8 (namely BuTel's ARC8 and
the most recent version of Scan Control), you now have a couple of
options. There is no support for the 246t-yet. Of course, depending on
where you're going, you might need to get one of the digital
trunktrackers - and even there, the comments I made above still hold true.
Time to do a little more digging. 73s Mike

2681. Re: Alinco AM Radio

Newsgroup: rec.radio.scanner
Date: 2004-10-21 23:59:56 UTC
From: Michael <Michael@Hotmail.com>
Message-ID: <29OdnUDM2sUu0OXcRVn-2w@look.ca>
Source record: 17846

Hi,

Well, I cannot help if I get flamed - or at least some insults, because I think I might deserve them - but here's my question:

I own an Alinco DJX5 'communications receiver'. I'be been able to receive everything from Cops to Coroners. (A couple years ago, we had a Medical Examiner in Toronto that was almost a comedian!) But, I digress....The DJX5 can monitor from 0.1 to 2200MHZ.

Last night, I had to go to work and wanted to listen to the Boston / NY game while I was on way to wait for the bus. Since my scanner has 'no gaps' I assumed it would be a cakewalk to dial in the station and I'm all set right? Nope! Owing to my own stupidity, I didn't bother to have a quick peek in the manual to see if anything was different when programming a simple Am station instead os the usual 800 Mhz stuff I usually have programmed. Well, needless to say, I couldn't get my local Am whci is very powerful on my radio and I'm certain I did everthing right.

Would anybody be kind enough to tell me where I went wrong? Again, I was in AM mode, step size was set to 1khz and I tried punching the the numbers several times. If I'm missing something very obvious - please just let me know. (Then, kick my ass to Alaska!)

Thanks,
Mike...hiding in a corner...T

Hi Mike!

Yes I did, I still get the same thing although when I punch in the frequency in the channels, I get the wrong frequency but when I go back to check, it is correct. Sometimes even the mode gets screwed up, sometimes I get AM or WFM mode as well. I'm wondering if it is a power problem, maybe the logic board isn't getting full voltage, the scanner cut out on me totally for about a second or two and came back on but it was totally clear, all the channels were open, waiting to be programmed again. It's like it had a lobotomy. I've been busy, otherwise I'd tinker with it but maybe with the power cutting out, perhaps it is leading me into the right direction. The Pro-2004 is my favorite scanner of all time, I'm somewhat bummed, at least I have a Pro-43 and Bearcat BC-210 so I'm not totally in the lurch. I also have Bearcat BC-101 I need to tinker with too, for some reason it doesn't receive, the computer logic circuits seem fine though, if that went bad, I know I'd be SOL there, the scanner was made in 1974. B-)

Also, you might need to attatch an antenna. Some radios (like the Kenwood TH-F6) use a bar antenna to recieve below a certain frequency, while yours you might not have that feature.
I am not sure by your email, but you might not have been able to even enter the frequency. I am not familiar with your radio, but others you have to enter leading zero(es), or a decimal point to for such a low frequency.
RTFM.

Trunk systems have been used by the phone companies for years. Your home phone is (most likely) connected by wires from your house to the central office (CO). Not everyone talks at the same time, so there are less connections between CO's then there are phones that each one serves. When you dial a number, the CO assigns you a "pair" (they use fiber-optic) to the next office and completes the call. When a CO is overloaded, you get the fast busy signal or the "All circuits are busy" message.

When a radio trunk system user transmits, the trunking computer picks an unused freq and assigns it to that user (or group).
For example, 50 users 10 frequencies. When the 11th user tries to talk, they get the busy signal.

Each major company (EDACS, Motorola, EF Johnson, etc) has their own design for a trunk system, so you can't use a Motorola trunk radio in an EDACS system.
There are also scanner programming quirks to watch for. Motorola you can load the frequencies in any order, while EDACS requires they are entered in a certain order. Any quality site or scanner book wiil have the correct order.

It has a DB9 on one end, and a small connecter (don't know the type)
on the other. It's listed on Unidens website under "Online Store".
It's probably even listed in the manual.

Mike,

If you're having a reception problem rather than a frequency input
problem, it's probably the antenna. I have an Alinco DJ-X2000, and
couldn't get ANYTHING in MW/AM with the stock antenna. I attached a
BNC test probe cable that I had lying around to the antenna jack,
hooked one of the the cable's alligator clips to a few feet of hookup
wire, and the stations came in much better. Then I tried my Radio
Shack collapsible whip antenna, extended to the full length, and that
worked even better. Here's the URL for that antenna:

http://www.radioshack.com/product.asp?catalog%5Fname=CTLG&category%5Fname=CTLG%5F008%5F009
%5F002%5F000&product%5Fid=20%2D006

I guess the stock antennas just aren't designed to perform on the
lower frequencies.

Does that mod truly open the frequencies or just let you hear cell "images"?

Thanks all. Yes, I tried enering the freq's starting with a '0', then a decimal, then a combo and still nothing. However, I was hearing 'something' in those lower bands, except there was no way to tell if I was on the correct station. Gonna' try a few experiments as well as your ideas.

Thanks,
Mike T

POTUS will be visiting my town tomorrow (Lakeland, Fla.). He will be arriving in his helicopter. He won't be landing at the airport.

Are there any specific frequencies (VHF, UHF) I should tune to hear the chopper as well as the Secret Service?

Is there likely to be any HF traffic?

What is the Prez's chopper called, Marine One?

Thanks,
Greg

Slow compared to a converntional scanner. Radio specs are 100 ch/sec in VFO mode and 20ch/sec in Memory mode. As most of my "scanning" is done in Memory mode, the 100 ch/sec really doesn't help me that much. But, since it is more of a "communication receiver" rather than a true blue "scanner" I can live with it!

I work for Los Angeles County DPW Road Dept. for 23 years. Would you believe they went to this system about ten years ago now. The old radio system was VHF 151.040. When they went to the new one we took all the trucks
to Palmdale, They took out the old radios and put in the new. They tested and worked OK in palmdale. But guess what? You get out of town into work areas they would not work. So the first time we had a big rain and snow storm we could not use the radios. And have people stranded way out in the middle of no where and can't get help. And in places where the old radios would have worked. This new GE. system would not work in places where the old VHS radios worked with no problem. So here we go back with all the trucks that were used for storms, Trucks with rock and snow blades and sanders for ice. to have the old radios put back in them. And are being used today because the new system still does not work any better then when it was put into service about ten years a go. You could bet if this system was used for police
or fire it would have worked before it was but into service.
And just think we had the privilege of paying six million $$ for it.

But if you can think of anything I am doing wrong please let me know.

I am considering the purchase of a Yaesu VR-500.
The manufacturers web site claims that the
software sold by RT systems and distributed as
an accessories can control the radio, as opposed to
just upload download capability.

Is the Yasesu vr-500 computer controllable?

Actually, I wrote a review on Scancat Lite Plus (not using the 796,
but most of what I wrote should still apply); and there's another
package, Scan Control that has a lite programming only version that's
quite inexpensive, but performs well. There's a review of that, too.
Both links, and others, can be found here:

2716. ...old Regency ACT-T16K scanner

Newsgroup: rec.radio.scanner
Date: 2004-10-24 02:01:01 UTC
From: wboas@nyx.net
Message-ID: <Pine.SUN.3.96.1041023195901.23601A-100000@nyx>
Source record: 17631

Folks,

At a `moving sale' I got a vintage (ca.1977) Regency scanner,
Model ACT-T16K.

From the net I learned it covers: 30-50, 146-174, 440-512Mhz.

Why it doesn't normally cover the bottom of the 2-meter amateur band
starting at 144Mhz is beyond me. However, according to the below
instructions found elsewhere on the net, it can be programed
out-of-band by pressing `9' and 'CL'.

Indeed, I was able to program in 145.49, and 53.05Mhz in the
2 & 6 meter bands.

Does anyone know, or remember anything else about this scanner?
...like how far `out-of-band' can it be programmed to go?

any info, schematics, or mod sources would be appreciated.

It's a cool old scanner with its 16 blinking red diodes.

Apparently cost $350.00 when new in 1977 . . .

Bill
wboas@nyx.net

REGENCY ACT-T16K Scanner (16 channels)

to program channels:

1. press PR then press the channel button
2. enter the freq. on the keypad
3. press the same channel button again
4. press SC to scan
5. press MA for manual then press the channel button
of the channel you want to listen to

to program search:

1. press SP
2. enter freq of lower limit on keyboard
3. press ch1 button
4. press ch2 button
5. enter freq of upper limit
6. press ch2 button again
7. press SS to start searching

To enable the weather alert feature:

1. program a freq of NOAA in ch16
2. press 2 and the decimal point
3. to stop the weather alert press 2 and CL(clear)

to enable ch1 priority press 1 and the decimal point

to disable the priority feature press 1 and CL

to enable out of band programming press 9 and clear while scanning

Heh... I've seen some nonsensical conspiracy theories, but suggesting
that GWB wore "a wire" to a debate...

1) when the same audio could be picked up on any TV set in the US
2) with a connection cable the (apparent) size of a brake cable outer
(bike content)
3) inexplicably routed outside his shirt
4) that somehow disappeared from other camera angles

I can't WAIT until this election is over so the level of nonsense
returns to normal.

If memory serves me correct, the Bearcat 210 wouldn't cover some segments of bands either and had to be tricked in a similar fashion. I believe a few frequencies had to be listened to by using "image" frequencies..... Adding or subtracting the I.F. from the intended frequency or some similar scheme. Some of those scanners were neat even if they didn't do all. The crappiest one IMHO that I seen, was one that used cards similar to computer punch cards - if I recall correctly. An elderly lady wanted a scanner, she bought one of those - suggested by the sales person. I seen it when she called me to "program" it. I told her to take it back and get a "real" scanner and suggested the BC 250. Her sister who did the original purchase and exchange for her, took the unit back and got a BC 250. That lady loved it until the day she died. That was her connection to the world, aside from the TV - radio and phone, being wheel chair bound and not able to get out much. The one scanner I seen which was neat but for some reason I never took a real liking to, was the Bearcat 101. I think it too had some programming tricks to it. Someone who "actually" owned one can clarify that.

I'm not much of a collector of radios - not enough room and don't want to tie up cash. What I do - is if I see pics of old radios, scanners, etc, cut them out and scrap book them. Just looking at the pics can take you back.

ID Tracker 3.4.0 is available for download. This is a minor update to
address a few issues.

Changes from previous version:

- Added "Disable Muting" option.
- Added scanner data transmit and receive indicators.

2732. looking for IC-R7000 owners for differents questions

Newsgroup: rec.radio.scanner
Date: 2004-10-24 18:52:07 UTC
From: St&#65533;phane REY <stephane.rey@netcourrier.com>
Message-ID: <417fe39b$0$3639$8fcfb975@news.wanadoo.fr>
Source record: 17418

Hi group.

I've recently baught a second hand IC-R7000. It seems it's a good receiver but I've some questions someone may answer :

- I'm comparing the R7000 signal strengh with my FT-736 transceiver and I can notice that a signal at 9+20 on the FT736 is receiver at 5 or 6 with my R7000. However, the weak signal received 0 on my FT-736 is received 0 with the R7000. Could it be a sensitivity issue (DC-DC power supply) or just a S-meter calibration matter ?

- I'm looking for CAT software for R7000 allowing to scan and automatically save sound files when there is a busy channel ?

- I've noticed a lot of birdies especially above 1Ghz. Is it a know issue for this receiver ?

- Finally I would be very interrested by your experience on receiving satellites : Inmarsat, Meteosat, Goes, ... I'd like to build antennas and preamplifiers. Please let me know if you know good devices to build and improve performances...

Regards
Stephane, F1TJJ

Wrong question.

If someone wanted to wire GWB for the debates, it would not have been
necessary to put a wire in ANY location where it could be visible.

Look elsewhere for evidence or wiring the pres. This ain't it.

Cross-posted to: alt.radio.scanner,rec.radio.scanner

Although frequencies 868 through 894 are blocked on my
10 year-old BC80XLT, I receive a startling amount of
cellular activity between 902 and 925 MHz at its
factory pre-set 12.5k step!

It's been chirping like a bird in that range all
morning, and if I put a signal it catches on HOLD, I'll
often find continuous transmissions (one call after
another). I get answering systems, voice mail messages,
and recorded voice prompts too ...it's fantastic!

Who said the cell band wasn't a blast to listen in on?
I think it's great, and easy to see why certain parties
would want it outlawed for use by We The People. If
this wasn't true, there wouldn't be unblocked versions.

I'll tell ya, between its top-end receiver feats, a
great audio, the slick keypad tricks, and it's rugged
durability (I've put this thing through hell), for a basic Uniden
model, this has proven itself to be anything but a consumer-grade
scanner!

Undoubtedly. Imaginations are fertile.

My point is simply that it is ridiculous to assume anyone wiring GWB
would do so using visible wires when visible wiring is totally
unnecessary and would be unbelievably careless or naive.

Not feasible, for technical reasons. You'd need to know the time slot
you want to listen to, for openers. And when the call switched to
another cell, you'd lose it.

Keep the batteries in it when you go through security, in case they
ask you to turn it on. (They're supposed to.) Take the batteries out
once you get into the plane. If the scanner comes on, it _could_ be
on a frequency that causes the local oscillator to be on a frequency
the aircraft needs to use in an emergency. (Do you feel lucky?)

Besides, it's illegal, as a passenger, to use a radio receiver on an
aircraft in flight - any radio receiver, so there's no need for the
batteries to be in the scanner. (Just make sure you don't put a 2200
mAh NIMH in a pocket full of keys and loose change. Unless you like
fires in your pockets.)

I just love when people who know nothing about a subject pontificate
about it. (Not the OP - Mr. "Instant Expert" Mandrell.)

Not all electronic equipment "creates a frequency", not that this
phrase actually means anything. And "Tempest" is a military term
having nothing to do with this situation.

He should stick to what he knows best - assuming there's anything he
knows at all.

...appreciate reply.

So far, it's going well, but I wonder if there is a way of `locking out' channels while scanning like the more modern scanners.

...the former owner promised to look for the manual before he moved....

>have, i.e. for a Yaesu VX-10 or such?

My cable for the VX-5 works perfectly with a stereo->mono adapter.
(the RS cable doesn't work with my laptop and USB->RS232 adapter). If
your cable came with ADMS, just pop off the stereo->4-pin adapter and
use a stereo->mono adapter ($3 at RS).

>Oh, and what's the software called?

Win95 works nicely, although I wish Don would release the source -
there are a number of changes I'd like to make. Or at least release
the protocol. (No program is perfect, except the one you write
yourself.) http://www.starrsoft.com/freeware/win95/default.asp

Try entering the channel number you want to lock out while the radio is scanning. To unlock the channel press the channel number again while the radio is scanning.

The protocol is Radio Shack proprietary and Don can't release it or his
program source file. You have to contact Radio Shack directly and negotiate
a license. If you post what program changes you want, maybe Don would
consider them.

New evidence emerging in "BUSH WIRED" story - see the wire....

During the second Presidential debate on Friday, October 8th President Bush adjusted his tie; a gesture which exposed a black object contrasting a white shirt.

Look:

http://puppetstring.blogspot.com

Is it a wire?

No registration is required, you can post anonymously

>wire attached to the pipe,) that should a lightning strike ever happen, the
>intense heat from the huge amount of electrical discharge may just melt the
>solder and allow the wire to become detached from the grounding pipe.

In the event of a direct lightning strike, the wire, the pipe (the
mast and antenna too) will disappear.

"Lightning protection" will protect the radio from static buildup from
nearby strikes, rain (raindrops carry a charge), etc. Don't *E*V*E*R*
think that you or your radio are "protected" against lightning by a
flimsy 6 inch thick piece of copper, let alone by a piece of wire, no
matter how thick. A lightning bolt is *at least* a few thousand volts
and a few thousand amps. (Yes, that's a MILLIONS of watts - for each
full strike.) The temperatures approach that of the sun.

Not impressed yet?

I've seen a well-"protected" commercial broadcast antenna (the gap
balls were about a foot in diameter each, grounded by solid rods a few
inches in diameter - no mere "wire") turn into a blackened concrete
base with 4 holes in it (where the tower legs had been), so don't
think that anything you install will do better. If you assume that a
direct strike to the antenna will kill you if the cable is still
connected to the scanner, you'll live a lot longer.

The last thing anyone wants is a link to a newspaper article telling
us how some hobbyist died from a lightning strike to his antenna.

>Ok 2 more questions: There's banks (100 channels per) then there's TG
>banks of 20 talkgroups. I can't seem to see a way to scan only that 1
>talkgroup bank

Turn off the other banks. (The numbers showing during "Scan" are the
banks turned on. The turned off banks show as ".".)

>Now here's the interesting questions - the 95 will do control channel
>only mode which is great. Can I put multiple control channels in the
>same bank?

Most systems have more than one control channel, so yes. Can you put
the control channels for multiple systems in one bank? No.

> Now I realize since there's only one list of talkgroups for
>the radio

Nope. One list of TGs for each bank.

>if say on system 1 talkgroup 12345 is the Police which I
>want to listen to but on system 2, talkgroup 12345 is the dog catcher
>which I could care less about, it would stop on that talkgroup.

Not if bank 2 were turned off. (Remember, 1 system/bank.)

>I'm guessing it wouldn't as based on an experiment I just did, if
>there's traffic at all on the control channel, even if it doesn't
>match any ID"s in the list, the scanner listens.

But won't stop if the bank is closed. (Function-5 toggles between
closed and open.)

>I put a WX channel in
>the same bank, and it took a while before it picked it up.

It scans the control channel(s) and has to decode each TG before
deciding to skip to the next channel in that bank. I tried the same
thing - putting a wx channel into a bank that scans a pretty heavily
used Motorola type II trunked system and it took approximately 1-1/4
seconds to return to the wx channel after I hit the scan button (with
a closed bank and only 1 TG not locked out.)

Did you think about what I wrote?

Why would someone use a device that requires wires outside his shirt
when they can easily be placed inside his shirt?

You may not agree with what the administration is doing, but don't make
the mistake of believing that they are stupid.

I didn't watch the video because I don't believe they are stupid enough
to use visible wires when they have better alternatives.

You don't know how much the journalist reported verbatim and how much was
'massaged' to fit the equivalent of the sound bite and meet the expected
audience's knowledge. Given that the journo likely wouldn't know a TV from a
giraffe unless they were clearly marked, it's surprising we can glean that
much out of the report.

If you mean the putative wire under the tie, I agree.
If you mean the bulge and wire on the back, I disagree. The device is
small but a wire has to run from it to the induction wire around the
neck. There aren't too many places to put it, and that wire must go up
to and around the neck. Recall though that the Bushies insisted on a
regulation for the debate that no shots should be taken from behind.
They also insisted on a regulation that there should be a private room
just off stage for each candidate to have a staffer.

> Look elsewhere for evidence or wiring the pres.

There's plenty of that. "Let me finish!"

Just one example of many. Check out the standard sites.

So you're suggesting that the President of the US can't find someone
to hook him up with a "wire" that's as sophisticated as something I
could cobble together with stuff in my garage (if I were to actually
buy something, I'd simply use connection wiring that would be
virtually invisible under TV conditions).

And one would have to wonder why they'd route the thing OUTSIDE his
shirt (I know - he had a trick electric tie, but it failed to squirt
water across the stage at Kerry...).

You conspiracy theorists are entertaining though...

No, not every digital phone has an analog mode. As a matter of fact,
less and less of the newer (Verizon at least) phones have analog, and
maybe half of the older phones have analog.

I can count on my hand the number of times in the past year my phone
switched to Analog.

2787. Re: Lightning Protection (Newbie)

Newsgroup: rec.radio.scanner
Date: 2004-10-25 19:25:56 UTC
From: Wet Chicken <wetchicken@gmail.com>
Message-ID: <7rcfd.304549$MQ5.75930@attbi_s52>
Source record: 17551

I remember when I was a kid a CB was in its prime in the 70's. My Dad would disconnect the coax and put the end in a soda (or beer) bottle when there was a storm around. He believed that the lightning coudn't get out of the bottle. Fortunately, we never took a direct hit although the campground next door did. That seemed to rumble for 10 minutes.
Also I remember a house with 3 camps on the same well. Lightning hit the water pipe connected between them, traveled into the main house and came out the water faucet in the kitchen. It connected with the breaker box on an adjacent wall bout 12 feet away. I didn't experience it, and I am glad I wasn't in the same room.
I drove wrecker for a while and a bolt hit a tree and tore the bark off like string cheese. There was a car parked next to it over the root system and melted holes in the front tires, and wiped out the electrical system. I was impressed.
A ham (SK) well versed and studied in lightning realized that when installing a lightning protection system on a structure using a pointed rod (sharpened like a pencil) will dissipate static electricity well. The rod itself will not pass the voltage or amperage of the lightning because of the diameter of the point. This does not mean it won't hit the side of the rod or the cable that is grounding it, but it might keep it out of the house.
A lightning protecttion system is like a fire sprinkler system. It cannot prevent the event, but it can have an effect on the frequency (lightning) or severity (fire).

There is no way to prevent a lightning strike, so remember to think out of the box when attempting to prevent lightning. A little arrestor inline with your coax will not keep lightning from entering via your coax, only disconnecting anything wired from your house will deter it. It is conceivable but extremely difficult to disconnect the AC power entering the building, but disconnecting the cable tv, phone, etc is a start and will help if someone is that obsessive.

Diamond Discone

Minimum of 9913Flex cable for the coax

Get a GOOD quality coax and connectors like 9913Flex
as a minimum, LMR400 is preferable.

I have a Pro-2052 w/ about 70ft of RG58 going up into the attic to hit
an RS discone. Here's what I will say, is that even with the really
crummy cable, reception is much better than it was with the other
antennas I tried, along with their shorter, higher quality cable runs.

These other antennas (not counting the crummy telescopic it came with
of course) are both mobiles. The first was a glass mount that I
bought two of, one for the car and one inside mounted to a little
stand I made. Reception was "ok".

The second is their wideband dual loaded magnetic mount, which was
quite a bit better than the other one, but still not great.

The #1 rule is of course height.. there is no substitute for it. Even
with the 70ft run -- I didn't want to drill holes in my ceiling, so it
goes across the roof to a closet, in through the trapdoor, then into
the middle of the attic -- I pick up much more than I did with the
other antenna. Partly design -- the discone is just better than any
kind of whip, but also because of the height difference of about 10-15
feet (and lack of wiring to interfere).

I can hear the ground control at the local airport now, which I was
never able to pick up before, and that's with an estimated loss of
about 10dB from the RG58.

The better cabling is an option (I'm looking for a good deal on some
9913 myself) but makes much more of a difference at high frequencies
than at lower ones. Even "crappy" RG8 only has a loss of around 5db @

400mhz for a 100ft run. 5db is enough that you'd notice, but it's about the smallest amount that you *could* notice.

This is all out the window if you ever intend to transmit over that same antenna. Get the best cabling you can and keep the run as short as possible.

-Allen

2798. Re: can't use FRS in the malls. even though they were advertised to

Newsgroup: rec.radio.scanner

I carry a cell phone and work UHF walkie-talkie into malls, and have never set off anything. I have also used FRS radios when shopping with my wife in malls. Again, we have never set off anything.

Maybe your radios have something strange going on, or are putting out some weird signal. I just read last week about a guy watching TV in his own home when the authorities showed up and banged on his door. His TV was putting out a stray off-freq signal that just happened to be on the same freq as some of the aircraft distress beacons. So, strange things can and do happen.

Oops. :)

> If you post what program changes you want, maybe Don would
>consider them.

1) My taste varies from day to day. I usually run stuff like Don's
program from the IDE, so I can change it as I want it changed.
(That's easier than maintaining a dozen slightly different versions.)

2) I doubt that Don would want to change a program so many people are
happy with.

But:

I'd like the ability to move a listing up (or down) over a bank stop.
IOW, if I move the listing in 399 down 1, it should go to 400.

I'd like to be able to copy and paste individual cells, rather than
the entire line. (At other times I'd want to copy and paste the
entire line.)

And how about the ability to directly print all non-zero frequency and
talkgroup entries? (I know I can print the text file, after I format
it.)

Question: Is there any way, in software, to change the frequencies in
the search banks, or are they hard wired?

From the Pro-95 manual:

"Battery Charge Current..... 150 mA"

Safe for 1500 mAh cells and above - *IF* you limit the charge to 16 hours or a fast temperature rise, whichever comes first.

>than at lower ones. Even "crappy" RG8 only has a loss of around 5db @ >400mhz for a 100ft run. 5db is enough that you'd notice, but it's >about the smallest amount that you *could* notice.

3db is 50%, or one "S" unit - easy enough to notice. Actually, the receiver capture ratio is the smallest amount you'll notice, so the better the receiver, the smaller the change it takes to make a big difference.

(If the capture ratio is, say, 2db, if the signal increases from the noise level to 2db above the noise level, what you hear changes from quite noisy to dead full quieting - very noticeable. If the capture ratio of the receiver is under 1db, it takes less than 1db change to make the above difference.)

BTW, the advantage of a discone is that it's a good match at just about all the frequencies we're interested in. It's not much of an antenna - it's more of a matching device between the end of the cable and space.

I was on a flight from New Zealand to Australia a few weeks ago and as the plane taxied out onto the runway a cell phone started ringing in the overhead locker above me. There were many disapproving stares from other passengers and crew, until I pointed out that one of the cabin crew had put his bag up there too. Whoops!

Yeah, saw that and you're probably right. There is a chance however that the journo has paraphrased despite what his use of punctuation suggests - I've known it to happen before. I'd *like* to think that the rescue dude was slightly less simian than the journo, even though I'm not on the same continent I'd just feel better. :-)

Cheers.

Ken

"Virtually invisible"? So was Bush's, but then he got caught, as he
would have if he had been wearing your jerry-rigged device, if you
could build one that worked- which I don't think you could. If you
look at the basic device <www.comtek.com/IFBCueing/ifbcueing.html>,
you will see that the wire is rather heavier than you imply, and for
good reason.

> And one would have to wonder why they'd route the thing OUTSIDE his
> shirt

I said NOT that. In back, underneath his jacket, we can't tell whether
the device is underneath his shirt or on top, and it doesn't matter.
We see it plainly underneath the jacket, and likewise underneath his
T-shirt in the White House photos of him clearing brush at Crawford
(see thread "Remote Control?").

But all this is just another one of your attempts at diversion. So again, what is YOUR explanation for the device clearly visible underneath his jacket and T-shirt? Here is mine, and it is the same as that of anyone not living in denial:

Actually if the receiver has a TSO, it can be used in flight. (A TSO
or Technical Service Order means it has been specifically blessed by
the US FAA, and is designed for and approved for aircraft use) An FAA
TSO is accepted without further discussion in many countries,
including Australia.

A few years ago I was actually carring a aircraft GPS on an airliner,
and asked if I could turn it on. When the Captain discovered it was a
aviation TSO'd unit, I got an invite to the flight deck, and the unit
made most of the trip as an additional navigation device in the
cockpit.

Bruce, I use the ADMS-3 cable that Yaesu sells, and the TK500 software that Bob Parnass crafts. Here's his URL: http://parnass.com/tk500/

Hope this helps...

>Stuff you never even KNEW was there will come in clean.

Oh I don't doubt that, I was just making the point that height matters
a lot more. If I put the discone back down of the attic on a 20ft run
instead of a 70ft run, I lose reception on some things.. especially
the UHF and higher bands, where attenuation in the RG58 is terrible.

Obviously, height *and* good cable is the best. But if you're in a
situation where it's one or the other, go for height first, replace
the cable later if you can.

>
>>The better cabling is an option (I'm looking for a good deal on some
>>9913 myself)
>
>LRM400 UltraFlex will make running the line much easier.
>Yes, it costs about 30% more, but it's worth it.

davisrf (www.davisrf.com) has 9913 that they claim is 2.6dB per 100ft
at 400MHz.. while they say LMR400 is around 2.1.

But the real clincher is.. $0.46/ft for 9913, or $0.64/ft for 9913
FLEXI-4XL. For a difference of about 0.4db for the length I'm
running, again at ~400mhz.

Only quoting 400 all the time for two reasons.. one, it's in the
'middle' of the coverage of most broadband scanners/antenns.. second,
I transmit in that band, so it's a concern. ;)

Hey, it amazes me too gents.

That's what I meant about the qualities of this rather
ordinary radio. I don't know why my BC80 receives cell
signals in the 900 meter range, but it yanks them in
like it was designed to do it.

I used to have a Fairmate that would catch 800 MHz
traffic in the 700 meter range, so I'm not surprised by
the phenomenon. They're obviously mirror signals of
frequencies found in other bands, but don't ask me to
explain it, or why one scanner does it and one doesn't.

I'm just pleased to have an FCC-defiant scanner while
there's still plenty of analog eavesdropping to do!

Incidentally, I found the in-house frequency used by a
mall security team. It's a huge one about 10 miles up
the road, and it turns out that every day life in a
200-store environment offers some of the most
intriguing scanner drama I've ever encountered.

That shouldn't be all that shocking. If it was a "wire" it could have been for almost anything. Remember he is a "Sitting President" with all of the crazy security that goes with the job. It could have been something to do with that. You didn't see any overt signs of security while watching the debates on TV, but I'll bet you there was plenty you didn't see.

Yes, that's absolutely true. What I mean is basically, you're going to be in the near field for a lot of transmission sources that create a higher noise floor than is anywhere near optimal, most of the time.. so you'll never hear those weak stations. Low loss cable will not help in this case, because the noise is attenuated as much as the signal. If the S/N coming in is 3:1, then it will still be 3:1 after the cable, it doesn't matter if the cable introduces 1dB or 10dB of loss.

If your reciever sensitivity isn't up to snuff, then a lot of times it doesn't matter how short or long your cable run is, or if it's high or low quality.

Isn't that what an antenna is really all about anyway, any kind of antenna? Some are designed to be directional and give you some amount of gain, but in the end, they are there to capture waves -- to interface the cable with space. ;)

You know ex-ACTLY what I'm talking about because you're one of THEM. For years the mighty Liberty Net on 3950 has been the only thing that has kept us from being overrun by Jewish Bankers taking our jobs at Wal-Mart, Trilateralists forcing kids to have abortions EVEN IF THEY'RE NOT PREGNANT, and other One-Worlders. And you can't stand that, can you?

Sure you - I mean "they" - call themselves One-Worlders, but do they ever say WHICH WORLD? I'm not going to be SOULED to the Space Bankers, my friend. Give me liberty or give me Slack. Or Kill Me(TM). Pick up on it before it's too late.

Not to mention the UN-hired Heliopters(TM) in infrasonic Whisper Mode seeding the skies with "Chem Trail Helper," the Clintons, the coverup behind the FACT that the FCC's Riley Hollingsworth CASTS NO SHADOW and HAS NO PULSE, and so many more TRUTHZ that you want to suppress.

What in the name of the blood-'n'-pus-soaked sock of Kurt Schilling are trying to do? Ruin America? (show all work)

Try looking for tempest and crypto if you want to find out more.

Anyway, from the Introduction referenced at:
http://www.usace.army.mil/inet/usace-docs/eng-pamphlets/ep1110-3-2/toc.htm

"TEMPEST is the unclassified name for the studies and investigation of
compromising emanations.
Equipment within the facility can be the source of electromagnetic waves and
stray currents/voltages with characteristics which are related to the
information content of signals being processed.
If these unintentional emissions are intercepted and studied, the analyst
can reconstruct the original data and could gain access to national security
information.
A proper TEMPEST design, however, will preclude the presence of analyzable
signals in uncontrolled areas."

Hi,

I'm no expert, but for whatever it's worth, I've tried
a R/S Disconne and also a Scantenna, side by side, in my attic.

The scantenna is better on all bands for my 780 Scanner.

Frankly, not by orders of magnitude better, but discernably "better".

Perhaps you're hearing cordless phones
in the 902 - 928 MHz range and misidentifying them as cell phones.

I was impressed with the BC80XLT I reviewed in Sept. 2004
Monitoring Times. It is very simple to operate so
it can serve as a good first scanner. The triple up-conversion
circuitry performs much better than older style economy
models employing a 10.8 or 10.7 MHz first IF, so it
is suitable as a second "knock around" scanner or more
advanced users, too.

You obviously know little about electronics. The size cable required
to carry the signal from a small microphone is absolutely tiny, a
small fraction of the size that headphone cables need to be (since
they carry many times more current, and are MUCH larger than they need
to be since the limitation is physical, not electrical). The "cable"
in question appears to be at least several mm wide - proving it's not
a "cable" but an odd shadow... but don't let that stop you from
dreaming up new conspiracy theories.

>Perhaps you're hearing cordless phones in the 902 - 928
>MHz range and misidentifying them as cell phones.

I get those signals too, but even a novice scanner enthusiast can tell the difference ... especially when these "mirror" signals remain active with identifiable traffic, and can be verified by any unblocked rig in the designated cellular range.

For instance, a signal heard on 907.0750 MHz in (factory pre-set) WFM@12.5k step on my BC80, will show up as 886.3500 MHz in NFM@30k step on the unblocked radio.

Nope ... I can't explain it boys, and I'm eagerly learning more all the time, but I figure a passion like ours knows no boundaries. It's just a matter of operating the equipment and acclimating to the mechanics of the trade.

This is FUN stuff.

>I was impressed with the BC80XLT I reviewed in Sept. 2004

Interesting observation Bob ... as the seasoned veteran of a BC80XLT and new owner of an AOR MK3, that's just how I feel, although I'm a still more of a BC80-level user.

However, that temporary status doesn't interfere with the sheer pleasure of catching smug cops talking to each other "privately" on their cell phones. I mean, the new breed of militant law enforcement can't very well discuss entrapping people on the unblocked airwaves, now can they?

Most major airlines are currently type approving mobile phones for aircraft now and its expected by 2006 to allow mobile phones on flights and aircraft even fitted with micro cells.
That aside as it stands reception isnt great in an effective faraday cage of an aircraft hull so short of holding the phone to a window you're unlikely to get decent reception. Phones will also transmit on full power to attempt to contact their base station. Add that to the absolute chaos phones cause be being in range of maybe 100 cells at a time and its fairly obvious why aircraft based microcells would be preferable.

2838. Antenna Question

Newsgroup: rec.radio.scanner
Date: 2004-10-26 18:25:35 UTC
From: Alex Clayton <alexx1400@yahoo.com>
Message-ID: <zEwfd.3169$kM.524@newsread3.news.pas.earthlink.net>
Source record: 17452

I have had an antenna I bought from RS years ago. I bought it for a Pro-79. I some times had trouble picking up the County calls where I work. The new one is several inches longer, and "claimed" to be great for this. It turned out it did nothing, and got relegated to the junk drawer. Well now that the city is switching over to an 800 trunked system I went to a 95 I had bought a couple years ago. The antenna can be a pain at times when carrying the thing so I decided to see if shortening it would hurt anything on the 800 band. I noticed for years now GMRS radios come with very short antenna's and work great. So anyway I started lopping off an inch at a time, and now it's down to 4 inches, much easier to carry, and I can't tell any difference in either the 800 or the 400 band reception. I know nothing about how this works. Is the longer antenna supposed to work better with other bands or something? I would like to lop off a little more if it has no ill effect. I guess I will see if I can pick up an old scanner that does not work on E-bay that has a BNC connector to play with and see just how short I can go. Anyway what's the point in the longer antenna?
Thanks

6 dB is the difference of one S-Unit. That's 25% of the Signal with one
more of S-Units.
For reception only purposes it's insiders knowledge to use _much_
cheaper lowloss tv-cable with 75 ohms runnig to a discone antenna. You
will hardly notice any loss for impedance mismatching as the impedance
curve of consumer grade scanners vary a lot from the 50 ohms.

The longer the antenna, the lower the frequency.

There are many resources out there that will show you how to use an
SWR to tune your antenna to the proper frequency, for stuff around
850MHz, 3.3 inches is the resonant length for 1/4 wavelength.. a
little bit shorter to account for the velocity in the material.

Be careful, get a good SWR if you can and use that. If not, I'd move
down to 1/8 to 1/4 inch snips at a time, not a full inch. As soon as
it starts to get worse, stop cutting, because you're at the low end of
the length.

Going below 1/4 wavelength you can't get any shorter and have it get
better. If you were going for 1/2 (6.6 inches @ 850mhz) and cut too
far, you could "start over" and keep cutting it down to 1/4, but
you're well past that if you're down to 4" already.

Well, in your previous post you stated that "You will hardly notice any loss..."

That implies that one WILL notice...

It's been my experience that the best thing to do would be to go with the best 50 ohm coax you can afford.

But heck, I've only been doing this darn radio stuff for a few months, so what the hell do I know?

Search banks are stored in ROM and cannot be changed, except SR5 which
allows custom limit entry.

How much do they cost? Looking over e-bay it looks like there is no shortage
of replacement antennas if I screw one up. If I buy an SWR (what the hell is
this?) I don't know what I would do with it after? I took another inch off
it, and it still works great for the 800 and 400. The police here are
switching over to the new 800 trunked system so they are broadcasting on
both the old 450's and new at the same time. Switching back and forth
between the two reception is still as far as I can tell, the same as it was.
The county and State Patrol here use 150's. I normally don't bother with
them but to test it I turned them on and they are working fine with the 3
inches too. Wish I had known this long ago it would have been nice not to
have the longer antenna getting in the damn way.

Loser! You should quote correctly -not destroying the content- 'tard.
A 50 ohm AirComm-plus cable costs three times as much as a lowloss 75
ohm TV-cable with the same loss.
And it gives pretty much the same results -if not better- on a broadband
antenna like a discone on consumer grade VHF/UHF-receivers wich do not
have a straight 50-ohm impedance. In most cases it varies between 30 and
150 ohms depending on the frequency you are receiving. So there is a
good chance a 75 ohm cable works even better than a 50 ohm cable with
the same loss. In worst case you will have an impedance mismatch loss of
3dB, but in most cases you will have a 3dB win depending on the scanner
you are using and frequency you are receiving.
There are few scannists who would buy or can afford a 0,70 US$/ft cable
for a 100ft run. So a good (lowloss!) TV-cable is really worth a try.

> Alberta, Canada.
> Fred Burgess

121.5 is the "VHF GUARD" frequency. It is used for emergency aircraft communications. If you hear any voice comms on this frequency, it is because someone is in deep doo-doo somewhere in the skies. RARELY will you hear anything else other than emergency traffic.

The aircraft band is VHF, so it is pretty much line-of-sight except for occasional odd propagation conditions. That's why you'll only hear the aircraft side of the conversation unless you're either using a well-elevated antenna or you're within ground-wave distance of the airfield. The higher you can get your antenna, the more signals you'll receive.

If the signal is very faint, it's probably an aircraft at quite a significant distance from your station.

William Tager blamed CBS & NBC stations in New York.
The frequencies would be the broadcast and news media
frequencies listed in Parts 73 & 74 of the FCC Rules.

From the Orange Book, try this:

Regency Touch ACT-TI6K
Fake woodgrain 16 chan.
DPDT on/off slide: use SM65 toggle.
Main board 700-401E. Audio IC: 301-576-29=LM380.

Loses program when unplugged if 9V battery dead; battery goes dead in
48 hours of being unplugged.

To Program: Keyboard on left, two rows (1-8
& 9-16) of channel buttons at right.
1 Touch PRogram on keyboard.
2 Touch chan button.
3 Touch CLear.
4 Enter freq desired including decimal.
5 Touch channel button
6 Touch next chan button.
7 repeat steps 3-6 for all channels.
8 When thru programming press Scan--set
squelch to scan if nobody talking.

(chan 16 is priority channel: press chan 16 button once while scanning for
priority; press again to delete priority).

To scan out-of-band freqs:
1 push MAnual.
2 Touch 9, CLear --.--(freq), Enter.

Back to normal: 1 press MAnual, 2 Press 9, press (decimal).

Lockout: press chan button twice then PR and SC.

Un-lockout: push chan button once.

SP (Search Program): push SP, (freq---.--- for
lower limit), chan 1 button, chan 2 button, (freq---.---for upper
limit), chan 2 button. Press SS to Search Scan. {press SS when noise
& signals stops search to continue searching}.

If all else fails, buy a manual for $6.00 from
http://www.bearcat1.com/manuals.htm

The US Security services have a 'Tempest' EMI standard. Actually it is
an Acronym for Transient Electromagnetic Pulse Emanation Standard)

Technically it is National Communications Security Information
Memorandum 5100 or NCSIM 5100. The exact specification is classified,
but having actually seen some Tempest compliant equipment in the late
1980's, I can tell you it makes FCC class B look like a cake walk.
Several computer makes made Tempest compliant systems, and other
Tempest Compliant devices. The idea was that these devices would have
no EMI/RFI signature to intercept.. These things would be used inside
embassies, Military, FBI and various intelligence installations.

Such systems were tested to comply with the Tempest standard

Not all devices have such a signature in the first place. The US Navy
is quite fond of TRF radios. Devices that have no oscillators
generally have no significant signatures either. TRF radios lack
oscillators, hence have no significant EMI/RFI signature.

Ummmm, if it was a RECEIVER, it would presumably go to his EAR, right?
If so, routing the wiring outside his shirt, under his tie to... ????
doesn't make a whole lot of sense, does it?

If it was to a speaker hidden in his tie, I fail to see how it could
be loud enough for him to hear it without being picked up by the
(sensitive) microphone(s) at the podium.

Sorry - the whole conspiracy theory thing makes (if it's possible)
LESS sense than the support for the Dan Rather memos.

i agree that the radio shacks poor mans discone is a improvement over most scanner antennas, however one needs to be aware that the radio shack discone uses hollow elements , subject to easier breakage than the icom discone.
i just put up a Radio Shack Discone and a channel master 5094. there is very little difference as one performs better on some freqs than the other, the rat shack con is omni directional as i believe the 5094 is some what directional (just my opinion) . the discone did receive aircraft ground allot better than the Channel master. however on FM broadcast it was equal to the channel Master if not a little worse. these are just some trial test as i have not gone to great comparisons yet. i am using the discone as a ham antenna at the moment, but will do more comparison later this week. the receiver is a Icom PCR-1000.
Just be careful with the rat shack discone as it is fragile.

It's a 10.3625 MHz image. (Which probably means that the scanner
needs a bit of alignment.)

All of them enter into it. A 30 element LPV with lossless cable,
feeding a receiver with a terrible noise figure, won't let you hear
very much.

>>BTW, the advantage of a discone is that it's a good match at just

That's *all* a discone is. Most antennas have some gain, even if it's
just the 3dbi of a dipole or ground plane.

An SWR (Standing Wave Ratio) meter - you need a signal source, like a
transmitter, to feed it.

An antenna noise bridge, a signal source like a signal generator, and
a few weeks of study will work better if you don't have transmitters
available for the frequencies in question.

Or you could just by a "stubby" antenna. They work worse than
standard length antennas, but since rubber ducks work so poorly to
begin with, you aren't losing much.

Yeah that's another good option as well.. a decent preamp can cost
quite a bit less than a long run of great cable like 9913 or 400..

Well I got a lot of responses to this and I still don't know any more than I did. I took another inch off, the 150's (county police), 450's & 800's (city police) still come in great. So bottom line now I can carry the thing at work much easier and it works great. I still have the original antenna if I ever need it, but I have never cared about the HAM, Aircraft and such. If anyone else has wished the antenna could be shorter to not be in the way I would recommend getting a spare first before trying this. Lot's of them around.

So, if the "wire" was going to his EAR, why would there be an
invisible wire going to an invisible earpiece, and a cable the size of
a pencil running outside his shirt under his tie???

And if it did NOT go to his ear, how did he hear the output of
whatever was hooked to that monster cable, without it being picked up
by the sensitive microphones on the podium?

This whole thing is silly beyond words, IMHO.

The only TRF radio I ever owned certainly had an oscillator. Matter of
fact, it had two, one in the mixer stage and one BFO.

Mark Hickey <mark@habcycles.com> wrote:

>This whole thing is silly beyond words, IMHO.

And just to PROVE that, I did a little searching for other photos of
the fateful night. Notice in this one...

http://story.news.yahoo.com/news?tmpl=story&u=/041009/ids_photos_ts/r1453622236.jpg

... hardly from a "Republican-friendly news source", the "wire" has
magically disappeared. The shirt is clearly visible well below the
apparent path of the "wire".

Or perhaps the "wire" is really just a photoshop item - does anyone
have a link to a non-conspiracy theory site with the original of that
photo? I didn't see the "wire photo" on any of the news service
photos I looked through.

Or actually - I think I may have just figured it out (really). If the
inside of the small end of the blue tie had a white tag (many do), it
would look JUST like the photo if it was dragged partially into view
by the President rearranging his belt/tie/whatever he's rearranging.
Notice how the "wire" seems to be the same color as the tie, and the
"white" that's showing isn't quite the same hue as the shirt.

Thank you for your modification of what my signature says.

You still have to ask yourself though what is the race of the vast majority of the Enron executives, World Com executives who bankrupted ATT for over 4 billion, and the other super criminals in the business world.

Ask yourself what is the race of over 90% of the people in congress?

What is the race of the commanders in chiefs who have given the orders to attack so so so many tiny, innocent countries around the world?

Perhaps black people would do the same thing IF... they were in power in Amerikkka and had total control as Bush does. Since they are not, and probably never will be, we can't put them into the equation with how most whites think.

Hence my signature

The greatest danger of WHITE culture; is their
belief in the necessity of roguery, deception, thieving,
and extreme violence as a means of human uplift.

Almost sounds like feature in the Optoelectronics Explorer Freq
Counter/Monitor unit called the Explorer... if it works like the explorer
not a bad deal...Opto unit cost $800.00 and this little thing only $119.00
(of course not digital and not they blocked the MIL-AIR band again) but it
it does act as a nearfield freqcounter/monitor not bad.

Makes sense Al, and I'm sure that's the case here, but why would I want to align anything when I'm receiving the full cellular range on a BLOCKED Uniden scanner made in 1995? However, I'd really like to know what formula was used to come up with that "image" number.

No problem. My only other advice would be is to go with one of the active splitters... MCA vs. MC as denoted in the product list.

While George (http://www.milaircomms.com/) and I may often disagree on various issues, I'm sure he would tell you that Stridsberg makes great multi-couplers.

One other thing I forgot was that I bought the splitter I use from another individual and a year or so later it failed. I contacted Stridsberg and he said to ship it to him. It was fixed free of charge, and shipped back to me free of charge.

A year or so later I began experiencing some issues with some mediumwave problems creeping up into the shortwave spectrum. I contacted Stridsberg, said to ship unit to them and they would modify it for me to alleviate those problems. Shipped it back to me, no charge.

That's service.

The stridsbergs are the way to go. I'm running a RS pro-2050 and pro-2030 at
the same time using a regular ol coax splitter. Seems to work fine for me,
though Im sure there is some signal loss. I'm using the cheapo RS scanner
antenna in the attic.

The problem is that the FRS has a sensormatic tag inside the case that has not been deactivated. You can either disassemble the FRS and remove the tag or ask a sympathetic store to run it past their deactivator.

Thanks Steve for you input on this. I knwe it was a VHF GUARD, but
was unsure of what, if any, voice traffic there was on it. As I said
in my previous post, that voice on it is very faint, and I only use a
rubber antenna or a telescopic whip, so I would probably hear only the
aircraft side of things, or the local ATC here in Calgary. As I
monitor the airport comms here and sometimes I recieve the ground as
well as the pilot.

He probably bought them somewhere via mail or something and the theft tag
wasn't deactivated. I use mine all the time too, no big deal. IF
deactivating the radio with the store's equipment doesn't help, maybe
contact the company who made them for advice or buy a new pair.

I need a Pro-43 Service manual in a bad way. I have a Pro-2006 service Manual i can copy for trade. If anything, I need a copy of the schematic for the boards. I bought a used 43 and the signal is very weak. It's tuned but takes a very strong signal to break squelch. It has been bench tested to prove this.

>>It's a 10.3625 MHz image. (Which probably means that
>>the scanner needs a bit of alignment.)

>Makes sense Al, and I'm sure that's the case here, but
>why would I want to align anything when I'm receiving
>the full cellular range on a BLOCKED Uniden scanner
>made in 1995?

Because you'd still receive the image (that only depends on the design
of the front end) but the sensitivity would probably go up. (Unless
your scanner has a first IF of 10.3625 MHz?)

>However, I'd really like to know what
>formula was used to come up with that "image" number.

The image is twice the IF above or below the transmitter frequency.
Since you gave both the image and transmitter frequencies, I took the
difference and divided by 2.

a common problem is the wire to the pcb from the socket twisting and
breaking the joints and the first surface mount coil going o/c or lifting.

I have tried all those sites but the last one. I just tried it and the
RS sites don't offer the Service manual. They will just give spec's.
Now seeing that again, I KNOW my spec's for the whole radio are way off.
The first site, I did download only to see an exploded view of the
radio and the Users Manual.

sounds like it
a broken connection between the antenna connector and the board, is the
BNC socket also loose?, good sign

From: scannerfan <scannerfan@hotmail.com>
Message-ID: <10o0rgamas5o1c9@corp.supernews.com>
Source record: 17352

Saw a Bearcat 800xlt at a hamfest last weekend in the box with accessories. Seller didn't have a price on it. I thought he probably wanted too much since the hamfest was in its second hour and it hadn't sold, but I asked the price anyway. Seller said "I want $20, but I think that's too much". I offered him $10 and ran out like a bandit with it. Works great.

Hit those hamfests and flea markets for great scanner deals and don't assume unpriced items are out of your price range... you might be very surprised.

I have a 2004 with the same problem. Program a specific frequency into a memory channel, go to another channel, then come back to the channel you just programmed and you find it changed itself to something else.

I've always presumed the scanner finally gave in to the cold solder joint dilemma. Over the past few years I've seen very few 2004s out there that worked 100% perfect.

I have a Realistic Pro 2006 for sale. It has been modded, and will still pick up an occasional analog cell call in my area (Dallas/Ft Worth). It's in very good shape. The EL display is bright. Asking $150 OBO.
Pics on request.

Bill Hammon

Thanks for answer Bill,

The attenuator is correctly off, but I've no preamplifier in the R7000.

Stephane

I have two scanners on a discone, and I get a noise on the other scanner when one changes bands (they both do it to each other). A friend recommended using 75 ohm coax and a tv splitter/amplifier. Amplified ones will isolate the outputs to alleviate that problem.
Now a couple of points. Using 75 ohm coax rather than 50 ohm that the scanner is looking for is ok, and will not hinder performance in any measureable amount. The other is if you have a strong FM station near you, it may cause overloading with the amplifier. Redice the gain if it is adjustable.

With you, it's always difficult to know whether you simply don't have
a clue what you are talking about, or are deliberately attempting to
divert, obfuscate, mislead and confuse. The latter seems more
plausible here, because I specifically denied that the so-called wire
beneath his tie was that, and yet you still keep going back to it.

I am talking about the cable visible on his back, going from the
device to his neck. I presume you have asked, "why is it so thick when
I could make it thinner, since earphone wires are so thin and could be

even thinner?". Bzzzz: the systems available for this puporse, such as in the link I provided above, do not use a wire to the ear. They use a wire to the neck, and the system works by induction. As you can see from the link, the wires are about the thickness of those observed under Bush's jacket. That is the way these things are made and that is what he wore.

> And if it did NOT go to his ear, how did he hear the output of
> whatever was hooked to that monster cable, without it being picked up
> by the sensitive microphones on the podium?

See above: it's an induction system. Just read the literature of the companies that make these systems. But of course you knew that. You are just obfuscating, diverting, and trying to mislead and confuse.

Nice of you to cut out the link. Wouldn't want any damaging information out there, would we? Scrub it clean man.

http://www.guardian.co.uk/cartoons/stevebell/0,7371,1325238,00.html

> Uh huh... pehaps you could tell us all WHY the POTUS would be wearing
> a wire at all, and what advantage that might possibly give him. Never
> mind the obvious technology issues that has disproven your theory -
> tell us all what possible advantage he might gain by wearing a wire to
> a debate.

So. Still no explanation from you of what it is, just divert, obfuscate, confuse, mislead. As to your question, even you can't think that you are scoring any points that way: anybody can see the advantage of cheating during the debates.

The pictures clearly show a device under his jacket and on other cases under his T-shirt. It is easily explainable by devices readily available on the market, and there is tape from Fox and CNN picking up that signal, prompting him. You have no explanation for that device and seek only to confuse the issue with irrelevant obfuscations.

You know damn well he is cheating. But then, you know damn well that nearly everything you have been arguing all this time is baloney.

Speaking of that:

****
On the other hand you claim to believe in the cause, and the rightness and necessity of the mission. So you have drawn a line and the question is whether or not you are willing to put your ass on that line to back it up. Now, in a fit of bravado, you said you were: you asserted that you were willing to go to Baghdad if someone else were willing to pay your ticket. Well, I have news for you that you will surely welcome: your rich uncle Sam is willing to pay not only your ticket- but also all your meals and accomodations, and your weapons too! [Note added as situation goes even further to Hell: $15,000 signing bonus now too] (Maybe not your body armor though, your pals Bush and Rumsfeld did send 40,000 troops over without Interceptor vests.) So are you willing to put your ass on the line or not? You'll look pretty disingenuous and cowardly if you back out now.
****

No service manual or parts available from Radio Shack for the Pro-43.
Checked BNC and is tight. From previous post i have checked coils and
all look good.

I have a couple of PRO 2005's , both about 20 years old, and
they still work perfectly. The troubles you are describing could come from
a weak battery (if used), a dirty switch (push buttun)., or a defective
processor unit. The last one happened to me with a VCR recorder and it
turned out to be cheaper to scrap it and purchase a new one from one of the
discount retailers. KOMBATT 18,

Good Morning.

You know what burns my butt more than anything. Los Angeles County knows this. La County Public Works has radio technicians that work for them. and told La County not to use this system. But they do it any way, And just as they were told it does not work. They just don't seem to care about it. My guess is someone got some big kick back in his pocket. This six million $ faulty system puts us and the public in danger when we can't get help when needed. And we do work 24 hrs. a day when there is a storm going on .
There has been accidents with people are hurt and we can't get help.
It's Typical of there arrogant attitude not to lesson to people that know what is best, Like the radio technicians.
And guess what? You get to pay for it.

Connector checked out ok. I bypassed the BNC and put the freq
generator on the BNC points on the IF board. Still the signal had to
be 100 microvolts to break squelch. RS does not carry the Service
Manual OR parts for the 43 any more.
Does anyone have or know someone with a damaged Pro-43 that has a good
IF board? Till then I'm still poking around...

From: Colin <ckennedy@accesswave.ca>
Message-ID: <dSegd.15882$df2.4553@edtnps89>
Source record: 17379

Hi! I recently purchased a Uniden BCT8, but am having tons of difficulty getting it set up properly. This is my first scanner ever, so I'm not very familiar with the technology, despite reading the manual a few times, it's no substitute for experience.

I am primariliy interested in monitoring local police and fire traffic (trunked, of course, for added difficulty for the beginner). I know what the control frequencies(channels?) are, I have primary and secondaries, and I also have a list of suggested frequencies that the unit came with for my area (Halifax, Nova Scotia, Canada). I have a list of talkgroup ID's as well.

I've programmed the control channels as primaries, I've entered the talkgroup IDs, and the unit appears to be scanning them (Scan ID will appear in the display). Something is obviously amiss though, because it picks up NOTHING unless I simply remove trunking, and manually surf in the 820-940MHz range.. I pick up TONS of traffic around 862-64, but... as it's trunked of course there is tons of control noise, and it's impossible to follow conversations.

I'm getting desperate here.. does anyone have ANY suggestions??

But how much to quiet the receiver to a noticeable amount, say on 150
MHz? In the tens of microvolts or around a microvolt (or less)?

IOW, is the receiver sensitivity bad, or is the squelch circuit bad?
Once you've localized that there are other tests to perform. For
instance, if it's the squelch, see if the high-pass network (usually a
cap and a resistor) is functioning.

Please make an effort to at least TRY to keep up here, "George".

The discussion that I was participating in was the other conspiracy
theory (...'scuse me, ONE of the other conspiracy theories) that had
"photographic proof" of a large cable running outside the POTUS' shirt
and under his tie.

I guess you'd like to start a discussion as to why the most powerful
man on earth would have to use a wire large enough to be visible
through his jacket when any police department can wire up any
crackhead so even a reasonably good pat-down won't discover the wire.

If so, please carry on without me.

First you have to tell the scanner what type of trunking system
(Motorola I, Motorola II, EDACS.) you're listening to.

There are a few very good introductory explanations of trunking
systems on the web. (I worked in the two-way field for many years,
but I started scanning trunked systems knowing less than you do.)

Probably an S-meter cal thing. When I got the service manual for my R7000
I recalled my S-meter, and noticed it was far off when I started.

Looking for a handheld scanner that has the following:
1. At least 5 or more search banks.
2. 500 or more memories.
3. Attenuation switch/control.
4. 29-1000 MHZ. Continuous if possible.
5. Takes 4 or less 1.5 vdc AA cells.
6. AM/FM Wide/Narrow
7. Not prone to overload or intermod. (if possible.)
8. Simple to operate & program by hand.

My interest is basically ham, aero, marine, utility.
Not interested in police, fire or ambulance so
digital/trunking is not necessary. Any suggestions
concerning the above would be appreciated.

Nor would I want them to. I want them to know about RESCUE. (Of course, a little knowledge of science, doesn't go astray.)

The big problem is with the journalists who don't know enough about journalism to know who to approach to ask a technical question. (I don't expect them to know the science either, but knowing who to ask is a journalism thing and they should know that.) Actually, they usually DO know that - they just don't care!!

Thanks for your answer T.

Concerning the birdies I will investigate but I've noticed for
instance one at 446.000 and 1446.000 MHz and above 1GHz many birdies
at round frequencies (1250.000, 1500.000, ...) and some at random
frequencies.

If anyone has still a service manual I would be interrested to buy one
or to have copie. I would like to check the aligment of the receiver
and check the S-meter calibration.

Thanks
Stephane

2985. Funny Problem with new RS PRO-95

Newsgroup: rec.radio.scanner
Date: 2004-10-29 12:27:42 UTC
From: John <john@lampooners.com>
Message-ID: <2Hqgd.30581$Jb.813339@twister.southeast.rr.com>
Source record: 17300

Hi,

I have a new PRO-95. If I am in Search or Scan mode and switch to Manual by pressing the 'Manual' key. The unit will switch to manual but then in about 5 seconds it will shut it's self off. This only happens if the squelch is set above the noise threshold. If the squelch is open it will stay on.

Anyone have any ideas? My quess is some setting but do not know what to reset.

Thanks for any help.

John

You can catch the -real-Pot Belly Radio Police and the Redneck Roundup
any week night on ham radio 3.860 LSB at 8:00 PM Eastern Time.
They call themselves the Eastern Patriot Net. A friend of mine e-mailed
me and said to have a listen. Sho enuf there they were! All paranoid and
goofy as the crazy old John Bircher Lady who sees commies under
her bed or your 85 yo Auntie who uncle John keeps in the granny
cottage attached to the house under medication. Last evening's topic was
alleged 1000 Russian troops somewhere in North Carolina on an
military airbase. (...no doubt the resident male NC redneck militia is
worried
about this because those cute young 19-23 yo Russians don't have
beer-bellies
and chain smoke like their current 'merkin boyfriends do and will likely
end up
marrying their girlfriends in the long run when they move here, get a
college
degree and leave them with 10 times more income than any militialoon
trailer
trash bozo ever will be able to do!) The other topic-of-the-evening was a
rambling *15 minute long rant* by their resident cukoo-bird from Michigan
who went on to say how Kerry and Bush report to the Queen of England and
the Rothschilds (..or was it the Pope? I forget which) turning the USA into
some kind of a Plantation with the Jews running things. (sounded as 3
sheets to the
wind as usual, so it's sometimes hard logic to follow you see) Also said
how the
Virgin Mary appears to somebody and tells him all the nasty things the NWO
has
in store for us like microchips in our buttocks, and in flu shots, and cans
of green
beans on the Dollar Store shelf, and in Gillette razors that activate a
tracking
RFID code when you walk by the cable TV box etc...etc...Oyvey Mama
Macree..!
So be sure to toon in. (they also mentioned 7.275 as a daytime freq) You
won't
be dissapointed, it's *more chock full* of rusty nuts and bolts than is
Auntie Filomena's
1987 Ford Crown Vic sitting in her driveway down the street that her
deceased
hubby got for oh-such-a-deal at the Municipal Equipment Auction 10 years
ago...

Nice try. In fact, you replied to me. By the way, when will you be
shipping out to Baghdad? $15,000 signing bonus you know.

> If so, please carry on without me.

Pleasure. Why don't you hook up with Lady Chatterly? Your analyses
have much in common.

After Nov 2nd, or more realistically, sometime in 2005, perhaps we
will all have the pleasure of carrying on without GWB and the
Halliburton pimp. Imagine, they just sent the Halliburton pimp out to
Hawaii in the hopes of swinging the vote Republican! Or was it to keep
him off the mainland, with things so close?

--
TO WHOM IT MAY CONCERN

Please excuse the inconvenience allegedly caused by our son.
Send us the bill for all the damages, and we can settle this to your
satisfaction, without any need for a public record of the incident.

Most Sincerely, George and Bar

Thanks for the looking but, this is not the Service Manual. I just had
a very generous person email me the PDF of the complete SM.

They don't seem to know much about it. Discones aren't resonant
antennas, but they do pick up signals from the design frequency to
daylight..

3005. full coverage AOR 2700s PLUS

Newsgroup: rec.radio.scanner
Date: 2004-10-30 04:42:40 UTC
From: cap-125 <kenerols@adelphia.net>
Message-ID: <23407034270bf280ab45c451e74eb019@localhost.talkaboutelectronicequipment.com>
Source record: 17320

I have in an estate two new in box AOR 2700s which were to be used to build a two receiver "time of arrival" Direction finder as described by Joseph moell in "Transmitter Hunting"

In addition the deceased P.I. had a Optioelectronics Scout and had the additional plug to allow auto tuning the radios

The radios have scan cat and another computer control software aith the connection attachments and cords.

To get good reception he got the FM notch filter,400 and 800Mhz high pass filters and a variable 1-20 db received signal amp.

Everybody wants to buy just one radio with the amp, Scout and filters. If anyone wants to buy the whole package and build the Direction Finder, I have a nice O-scope I used in school which would first match up the two incoming signals so you know your two antennas are parallel to the "front" of the signal and then display the results graphically.

I would like to see someone build the time of arrival DF but I would sell them seperately if I have to. The radios were ordered just before the frequency ban took effect and stored until now.

Not having read the linked page....
Discones ARE resonant on an extremly wide range.
Therefore they have nearly no gain above the (theortical) isotropic antenna. This means they have a loss of around 1/2 S-unit against a dipole or a half-wave vertikal antenna on a specified frequency. Not too bad for a compromise.
The resonant range of a well designed and built discone is spread 1:10 on wich you can transmit. This is 50 to 500 Mhz or 100 to 1000Mhz for example, covering the most wanted frequencies for scannists and is also usable on ham-bands or FRS to transmit.
The receiving range -allowing an impedance mismatch- is much wider when (usually) allowing a loss of 1 S-unit (-6dB). The difference you only will notice on faint signals.
There are some other antennas too -directional and omnidirectional-, providing a relatively wide resonant range but not nearly as wide as a discone.

Any place that sells RS232C serial cables with DB-9 ends on it... Computer stores, eBay, you name it. Radio Shack.... They're everywhere... You need a female end for the computer side, and then whatever for the scanner side. Look at the back of the unit and figure it out...

Easy stuff...

We're using different definitions of "resonant". The definition I use
says that an antenna can only resonate on a frequency. (Pretty much,
the frequency a dip meter will indicate when coupled to the antenna.)
It can have a bandwidth over which it can be used, but the resonant
point is (usually) one single frequency. Discones look like dipoles
with the 2 legs being different lengths, so the best one could say -
using my definition - is that they "resonate" on the frequency at
which the disc is 1/2 wavelength in diameter and the frequency at
which the cone element length is 1/4 wavelength.

But they probably are the best tradeoff for multi-band scanning.

So do I. LTR (not that I need LTR yet), A/D PL decode and signal
stalker (which would save me a lot of time now and then).

I wonder how much more it'll cost, though. If it comes out at $199
I'll kick myself for buying the 95 on sale.

Let's use an accepted engineering definition- resonance is defined when the input Z has zero reactance- a properly designed discone (disc and cone- not a skeletal version) is virtually reactance free over a very wide band. Discones may look like dipoles- although you really have to be imaginitive, is a derivative of the bicone antenna (replace the disk with another cone). With proper included cone angle and proper machining of the junction (this limits hi end performance) it is a wonderfully broadbanded antenna.

To say so, a discone has it's "middle frequency". But impedance curve
stays constantly over a very wide range around. So in theoretics you can
get a frequency modulated signal with center frequency of let's say
500Mhz and a bandwidth of 800Mhz through a discone with a straight power
curve wich has no loss by mismatching of the antennea.

I don't know of any TRX providing such a signal :-)

As I understand the principle of a discone the disc is a load plate wich spreads the bandwidth in conjunction wich the conical "antenna wire". So the "resonant" wavelength is more related to the length of the cone measured from the the top plate in 90 degree angle to the bottom.
You may correct me if I'm wrong :-)
Have a nice weekend.

I suppose it's not legal to build your own scanner.
Maybe it depends on your are laws.

However, it's absolutely possible to design something. You must specify what you want to listen. i.e. frequencies and modes.

If your target is a low-cost AM/FM scanner, some good design works with a satellite tuner (widely availble from old sat. demodulators).
Check this link : http://hem.passagen.se/communication/supertuner.html

Otherwise if you plan to design a scanner with very good performances, it's more complex and requires some good knowledges in RF designs.
I'm starting a project with a DDS/PLL module able to generate 1 to 2 GHz, 1Hz resolution generator which will be the core of a scanner / spectrum analyzer. Not so simple but performances will be better.

However, to listen to the PMR around your location, the tuner versino may give some good enough results.

3040. FIGHTING a mobile scanner charge from MN

Newsgroup: rec.radio.scanner
Date: 2004-10-31 01:37:52 UTC
From: Scanner Guy <private@private.pri>
Message-ID: <private-1FCDEB.19375230102004@text-west.newsfeeds.com>
Source record: 17254

Hi Guys,

I am posting here as I need some ideas in regards to fighting a mobile scanner charge I received in Minnesota. Any insight, ideas, prior cases, or anything else you think will help, will be VERY much appreciated.

Here is a little background. I live on the Wisconsin Minnesota border and drive a Hummer H1 as my daily driver. I also use it for search and rescue during blizzards, downpours etc... Because of this I do have a uniden scanner installed. Of course it is perfectly legal to have in Wisconsin. Anyway I crossed the border to run some errands for my mother in-law who is in an assisted living home in Minnesota. I got pulled over in Minnesota for an improper lane change. Long story short, I got issued a ticket (misdemeanor)for having a scanner in my Hummer. So now I am going through the law word by word finding anyway possible to fight it. The law is so vague, that you can not even bring a handheld scanner to a Nascar race.

Here is a link to the law:

http://www.revisor.leg.state.mn.us/stats/299C/37.html

Here is the kicker. I got this one week before I got my amateur radio license. Also since I did not know it was illegal in MN, I actually admitted I could pick up his signal and showed him. So one would think I am screwed, but I think if I put forth a strong case with my lawyerl, there is a good chance I can get out of it. The cop made a note of my model of scanner (Uniden) but did not make note of the antenna. So my first thought for my defense was that I was mistaken in my admission. I was thinking maybe changing antennas and show in court that the antenna was not capable of receiving the police frequencies.

Another idea, was maybe finding some sort of problem with the PD's FCC license (highly unlikely) and therefor they would not be authorized to transmit on their frequencies.

Anyway. Anyone have any other ideas? I can not find any case law on other cases that were successfully defeated.

Thanks guys, your help is really appreciated.

BTW, of couses the cop was a rookie.

Check the issue date of your amateur radio license.
The FCC might have issued the
license a week before you physically received it.

3042. BC-142XL Blank Display & No Audio Trying to Repair For Nephew

Newsgroup: rec.radio.scanner
Date: 2004-10-31 02:51:00 UTC
From: tbusky@prox.com
Message-ID: <2d90e604.0410301851.2c86e64b@posting.google.com>
Source record: 17256

My nephew bought a BC142XLT at a tag sale to try out scanning. It worked for a less than 15 minutes, but then the display went dead and there is just barely a hiss from the speaker no matter where the squelch is set. He brought it to me to try to fix it. I'd like to show him that you can still work on your electronics since this is all through hole construction.

My first question is there a schematic out there I can get for free?

My next question is does the following troubleshooting information make any sense to anyone?

I have opened up the unit and probed around a bit. The 8V regulator is putting out 7.95V which looks good. The electrolytics don't look tired. It looks like the receive section works because I get what sounds like receive audio hiss from the audio noise output pin of the MC3359 FM demodulator chip. It also looks like the audio secion works because when I put my fingers on the input lines and around the circuit I get some feedback and noise from the speaker.

I assume the UC1116 is some kind of controller. It looks pretty dead. I probed the keyboard inputs and the ones that are not ground stay at 3.5V. There is no pulsing as I would expect if the controller was scanning the keyboard. The diplay lines are mostly at 6.5V levels with no pulsing I would expect if the display was being scanned. Not a single segment comes on. There is a 390 ohm resistor that looks like it got hot. This drops the input power to about 5.2V. This voltage is present as long as the power is plugged in even if the switch is off. There is a sine wave of 383khz at UC1116 pin 16.

There is an interesting circuit that is generating 20V and apparently driven by an LM386 audio amplifier through a multiplier. I thought this might be for the display, but the signal runs to a Harris chip on the RF side of the board.

Any help would be greatly appreciated.

Thanks,
Ted

So what you are saying Dale is that a bicone antenna is a good wideband
antenna? Do they exhibit any gain?

Gain? ...compared to what?
Yes, the bicone antenna has gain!
It's gain is comparable to a dipole.
But a bicone is far away to be as broadband as a discone.

I never thought I'd say anything like this. It is the law of that state
and you broke it......Pay the fine.
The cop might be a rookie but you going to court and lying about what
you told him is only going to make matters worse!
Saying your scanner can't pick up police frequencies after showing the
cop that it will, not a smart move.
Think about this, if you did beat the charge by lying, would that cop
not dislike you for making him look like a liar, would he not pull you
over everytime he sees your vehicle and maybe write bogus tickets to you?
Here's the best way to beat that ticket, just don't pay it and never
goto Minnesota again!

My first suggestion is to not commit any more crimes. This means that you pay the ticket if you have to. Even small crimes have a nasty habit of showing up later in life and causing problems for you.

I recommend that you get some documentation of your search and rescue work and show it to the judge. This will show him that you lave a legitimate purpose for having the radio in the vehicle. After all, that is the intent of the law - to keep radios out of the cars of people who don't have a legitimate purpose for them. bring any membership cards you have showing that you belong to a search and rescue group. Get a letter from the leader of your organization on official letterhead telling the judge about your search and rescue work. Bring photos of you on the job, a photo of you in some sort of search and rescue outfit or uniform is even better. Bring a witness who has worked with you if necessary. Judges like people who volunteer in their communities. Make sure he understands what you do.

Also bring your new amateur radio license. Even if the date of issue is after your ticket, the license shows that the law is trying to accommodate people like you. Don't mention the date on the amateur license but if the Judge brings it up don't lie. Never lie.

Bring a copy of the law for the judge to reference because he may have never had this issue come before him yet.

If you mail copies of all this documentation to the court clerk well in advance then the judge might have the opportunity to review it before you get to court. Even if he doesn't see it until your court date it looks better when the documentation is already in the files and not coming out of your pocket.

My advice is to show the judge all the above documentation and then throw yourself of the mercy of the court. Explain that you didn't intend to violate the spirit of that law. Ask the judge politely if he will be willing to dismiss the ticket. If he refuses to dismiss because technically you did violate the letter of the law then ask the judge if he would be willing to find you guilty but waive the fine.

Good luck!!

Message-ID: <Xns959365C14C87midolcrampscom@216.168.3.44>
Source record: 17264

I could probably find an answer if I searched, but I'll throw it out anyway...

If a yagi should be set up for vertical polorization to capture the best signal, why are TV yagis set up for horizontal polarization? Shouldn't it be the same for both signals? Just wondering...

What _both_ signals?

TV-signals are sent in horizontal polarisation others (like FM-radio) in
vertikal polarisation. So it's the way it is...

I work for RS, and from what I've heard through the grapevine- the price on the '96 will not drop before Christmas. Instead, the '95 will probably remain on sale until the end of the year. We've got at leat 15 of the '95s stocked in our store alone, and sales continue to be good. We can't even get a '96 in our store...most are stocked in the larger stores, while the majority are still sold RSU.

Thought some may find it funny here...the latest updated ScanCat Light program pushed to the stores showed up with an empty frequency DB...we had to load the -1 version to have a DB to load to the '95s we sold. I loaded a '95 a few days before I discovered the error...the customer came back a few hours later complaining that all of his channels were locked out. I spent a few minutes resetting the scanner and reloading, again...an empty DB...before finding the problem...duh ;-)

Heh...

Did you ask anyone in the store? There's no RS I've been in that doesn't
have a scanner...and one hooked up and running...unless the SM is just
plain stupid.

You can also go to radioshack.com and order one straight from the
warehouse...sorry for the blatant commercial response...well, no I'm not.

predominantly TV transmitters broadcast using horizontal polarisation, this
gives a better range for less power with less likelihood of interference.
mainly on historical grounds, as few TV's were portable when the system was
devised, now however, not all are horizontal, and many are vertical.
FM radio is mainly mixed (both) because we have car & portable radios with
the FM band this last 40yrs

now as for your yagi what is it for?

if it's for use with a scanner, you'd do well to actually slant it! though
perhaps vertical will suit best unless you wish to listen to hams or outside
the UK where radio waves & polarisation & the outer earth layers do funny
things over 100+ miles and horz is normally better

3057. Need suggestions for a small indash police scanner.....

Newsgroup: rec.radio.scanner
Date: 2004-10-31 19:37:36 UTC
From: nctrnlboy@yahoo.com
Message-ID: <11d9990e.0410311137.2e10fd86@posting.google.com>
Source record: 17271

i used to be in the scanning hobby a few years ago. Not REALLY into the hobby seriously, but I did own a Uniden sc150 sportcat (handheld) and a bearcat bct7 beartracker mobile scanner (I still own the sportcat but it needs a new battery).... I didnt like the bct7 as it had some quirks (like a limited amount of frequencies you could block out). The only thing I liked about the bct7 was its size & lighted display. I didnt like listening to police freqs much, but the rest I did enjoy (my favorite activity was listening to radio Djs oh location in their mobile vans talking when they were off the air).
Anyway.... I was wondering if anyone could recommend a small (preferrably the size of a CB or a car stereo deck) 100-300 channel scanner that I could mount in my jeep that has a lighted display.

Thanks in advance for any advice.

Very dumb and stupid move.

When you get pulled over for something, you respond "no sir" and "yes sir"... not "I've got a scanner and can hear everything you say... wanna hear yourself over the radio"? Hell... no wonder you got a ticket for being so arrogant.

That's kind of like saying to a cop "my radar detector didn't go off"... just saying that will get you a ticket.

You're not helping any of us mobile scanner owners by bragging to cops about how you can monitor their conversations.

My advice... pay the ticket and hopefully you learned a lesson. At least he didn't take your radio.

You might consider a dual-band ham transceiver. They often have extended receive ranges, either out of the box or with a simple mod. Just disconnect the microphone and don't keep it in the car if you don't have a ham license. There are a lot of models available, both new and used. I would NOT recommend a Kenwood TM-G707A, however, because it scans very slowly. You didn't mention a price range, but I'm sure you could find something suitable in the $200 to $400 range.

If you don't mind doing that - the 3 megs is no problem with adsl;-) and
this address steve_sharp<remove>@firehousemail.com will allow 10 meg
attaches.

My 2006 has the Optoscan interface and is still a much used piece of kit -
but it has the habit of going deaf after a variable amount of time switched
on - hence the need for a service manual....

Thanks!

Radio Shack parts did stock them until recently... you might check to see if they still do. They also show up on Ebay occasionally.

You can also make your own from generic backlight stock. Instructions can be found on the web.

New or used? I believe my 150-channel PRO-2066, discontinued several
years ago, comes in a standard DIN-size case used by car audio
components.

One caveat: you will have to use an external speaker, as the internal
one, hiding behind the dash, will be muffled.

> well as the pilot.

One thing you might want to try is to put the antenna on a short coax length, with a BNC-BNC feedthrough connector, and get the antenna up as high as you can in the room. That, or perhaps get a mag-mount antenna and put it up on top of the fridge or filing cabinet or something. That will improve reception considerably. I've done that with my 2m HT at work, with good results. With the mag-mount route, though, be sure to keep the base well away from any magnetic media such as video or audio tapes or computer disks (optical media like CD-ROMs and DVDs are safe).

Best plan is to put 121.5 in as your Priority channel. That way the scanner will blip over to it every second or so to listen for traffic, and it will pre-empt your scanner's operation if anything there breaks the squelch.

> I was amazed.

I find this so amazing I don't know if you are serious or joking, so I may as well take the time to list some of the Halliburton pimp's greatest hits:

-Arrest for drunk driving (see the Smoking Gun for the rap sheet)
-Didn't go to Vietnam because he "had better things to do":
In fact the way he got out was especially sleazy: besides his college deferments, there was for a certain period an exception for married men. When this was set to expire, he headed off at full speed to Vegas with Lynne to get married just before deadline. Then when the exemption for those with children was set to expire, good ol' Lynne got pregnant just in time.
-Record in congress: talk about a do-nothing congressman. He is notable only for voting against head start, against a holiday to commemorate MLK, against meals on wheels for seniors, and similar scrooge-like things. Zero actually doing anything positive.
-Record at Halliburton: a disaster. Despite all the baksheesh he has sent their way as VP, they may lose money this year, the legacy of the disastrous decisions he made as CEO.
-Back then, lobbied to get sanctions lifted from Iraq and Iran. HYPOCRITE.
-Remember the debate with Lieberman? The latter pointed out that Mr Dick Cheney had done pretty well under Clintonomics. The Halliburton pimp's response: "I assure you the government had nothing to do with it." LIAR- ALL his money is government welfare. He would never have had his job at Halliburton if not for his government contacts, since he had no business experience, and Halliburton lives off the government teat.
-Remember the California "energy crisis" and his role in that? DO NOTHING. Let GWB's buddies at Enron defraud the nation and nearly succeed in forcing California into bankruptcy. Real people suffered mightily because he was too lazy and too ideological to DO HIS JOB, MR ENERGY POLICY.
-Remember how he went about making energy policy? Let the megalopolies

write it for him in secret, behind closed doors. American public, keep out!
-Like every one else in the Bush administration, he did nothing about Al Qaeda, until it was too late.
-Rigged the intelligence process to make sure there was an excuse to invade Iraq.
-"I'm at the Senate most Tuesdays, and Senator, this is the first time we've met"; "I don't know why things have gotten so nasty." YEAH? Well for years now he never meets ANYBODY from the other side of the aisle except to say "Go F-CK yourself", and he's actually presided over the Senate something like two or three times during the whole Bush administration.
-Ordered the outing of Valerie Plame? If Kerry gets in, we may find out. Fuggedaboutit if Bush gets in again.

It goes on and on.

Yup. Under these bozos, it seems more like a fealty contest:

One Nation Under Bush
At a campaign rally, Republicans recite the "Bush Pledge."
By Chris Suellentrop
Updated Thursday, Oct. 28, 2004, at 10:44 PM PT

PORT ST. LUCIE, Fla-"I want you to stand, raise your right hands,"
and recite "the Bush Pledge," said Florida state Sen. Ken Pruitt. The
assembled mass of about 2,000 in this Treasure Coast town about an
hour north of West Palm Beach dutifully rose, arms aloft, and repeated
after Pruitt: "I care about freedom and liberty. I care about my
family. I care about my country. Because I care, I promise to work
hard to re-elect, re-elect George W. Bush as president of the United
States."

I know the Bush-Cheney campaign occasionally requires the people who
attend its events to sign loyalty oaths, but this was the first time I
have ever seen an audience actually stand and utter one. Maybe they've
replaced the written oath with a verbal one.

This may be the first and only time the "Bush Pledge" has been taken
at an event I've attended (or any event for that matter), but I'm not
the best witness. One of the unfortunate drawbacks of traveling with a
presidential candidate is that you arrive at a political rally when he
does, which means you arrive right before he speaks. Neither President
Bush nor John Kerry spends a lot of time waiting backstage while the
warm-up acts address the crowd. Those speakers are timed to end when
the candidate arrives (although, given that Kerry is habitually late,
I wonder if they tell the introductory speakers to go long), so the
traveling press typically misses their remarks.

Because I've been traveling "outside the bubble" of the campaign
planes for the past week, I arrived at a Thursday rally for Laura Bush
before it began, and I sat with the local press. For only the second
time, I witnessed a Bush campaign event in full. It wasn't a

particularly notable experience, except for the fact that it opened with that weird pledge of fealty, reminiscent of the cultlike cheer that Wal-Mart forces its employees to perform. There were a few good lines, such as this one from Florida state Sen. Mike Haridopolos: "Our president likes to sign the front of your check. His opponent likes to sign the back of your check." But the second-most memorable event was a remarkably mendacious speech given by U.S. Rep. Mark Foley, a Republican from Florida's 16th District.

Foley had the gall to condemn Kerry for his "reckless disregard for the facts" in a speech in which the least of his errors came when he sloppily claimed that John Edwards has served in the U.S. Senate for four years, rather than six. The main target of Foley's attack was Kerry's criticism of the president for allowing the al-Qaqaa weapons dump to be looted, presumably by terrorists, during a war that was designed precisely to prevent such an event from occurring. "The senator from Massachusetts immediately grabbed onto that without doing any checking, any fact-checking. He didn't even call Dan Rather," Foley said. But "NBC News followed up saying, oh-ho, not so fast. We don't have all the facts yet. Yet he went on national TV and announced, with reckless disregard for the facts, that somehow during George Bush's administration, these weapons were stolen." Foley's right in one sense, that we still don't have all the facts. But here's a fact that emerged after Foley's speech: Former weapons inspector David Kay said on CNN after viewing the footage of the site filmed by ABC News, "There was HMX, RDX in there. The seal was broken. And quite frankly, to me the most frightening thing is not only was the seal broken, lock broken, but the soldiers left after opening it up. I mean, to rephrase the so-called Pottery Barn rule. If you open an arms bunker, you own it. You have to provide security."

Foley continued, "Well, folks, one thing it does prove: There were weapons of mass destruction in Iraq before we went there." Well, um, there were weapons. The explosives weren't biological, chemical, or nuclear. And they were locked up by the international weapons inspectors derided by the administration, and they were "liberated" by the president's war. But instead of concluding that the war was a mistake, or at least that it should have been conducted differently, Foley declared, "The other thing it proves is that Saddam Hussein was the most important weapon of mass destruction to remove, and this president took him down." If we invaded North Korea and that country's nuclear weapons ended up in the hands of al-Qaida, would that prove that the invasion was a success?

But if you don't believe the Iraq invasion was justified, you can still vote for President Bush because he hugs little girls and, most important of all, he threw a baseball. After telling the audience of his personal experience of Sept. 11, Foley revisited the story of Bush throwing out the first pitch of the World Series in 2001, which received a hilariously somber treatment in a video narrated by Fred Thompson at the Republican convention. Like any tall tale, the story

has become more and more embroidered with time. In Foley's version, the president boldly strode to the mound "without a bulletproof vest." But the entire point of the convention video was that throwing the ball from the mound was so difficult because Bush's arms were restricted by a bulletproof vest.

I'm not sure which is crazier, thinking that al-Qaqaa proves that the Iraq war was justified, or that President Bush stood on the mound at Yankee Stadium less than two months after 9/11 without wearing a flak jacket. Based on his speech, Mark Foley is either delusional or he has a serious problem telling the truth. But you can't blame him. He's probably angling for a job in a second Bush administration.

Chris Suellentrop is Slate's deputy Washington bureau chief.

Source record: 17290

I also tried to e-mail him to no avail. I also repaired one at some point. If memory serves me correct, it was an Electrolytic cap and a zener went bad in the power supply section. In his initial post (as included below) he said "the electrolytics don't look tired." I'm guessing he meant he was looking for them bulging out at the bottom as is "a" sign. Though you may not see the bottom bulging, it isn't the only sign a cap is bad. You have to remove them for testing - if in doubt. They can be leaky or open and you wouldn't know it to "look" at it. If you can't "''test" the cap, then replace it if possible to eliminate it as a cause. Also your method of checking a IC isn't good either. Unless it looks cracked, bubbled - to show actual damage or possible damage - it can be bad with no outward appearance. OR it could be good! You have to check voltages and see what is what. You can't just assume it is bad. An IC needs the "supply" voltage and a ground to start. From there, it needs all the necessary input voltages to work. IF the supply isn't there, the ground or an input and ultimately an output voltage, then something is wrong. NO input voltage chip, no output. No supply voltage, it won't work. Same with ground. IF input but no output, then you can say that part of the chip is shot. Never just assume the chip is bad. That is bad because some of those parts are no longer available. You could end up tossing an otherwise repairable scanner with that assumption. It sounds like "A" section of the power supply was checked, but not all. IF any of the others are bad, could be why the pulses are missing. When I do repairs like that, pulses are not what I look for. I look for what brings the display back and audio. The keyboard pulses will be later when I can see any actions on the display and hear any results. I think you're looking in the wrong area. Concentrate on the "Display" and Audio issues which most likely will be a power supply defect. Does no good to play with the keyboard when it won't show up on the screen!

Of the many manuals I have, I thought I had the repair manual here for that unit, but I don't. I've repaired enough radios to be able to have some idea as to condition. I hate working on radios with no schematics, but I've done it and succeeded. It is all in a matter of going about it in an organized manner. Not "assuming". Checking to see what works and doesn't and get an idea as to HOW things are supposed to work. The power supply is a good start in any failure where two or more symptoms appear.

Not having the schematic myself, I can't be of more help without the unit. But going on past repairs, I've offered my results.

ITYM PRO-2067, the replacment for the PRO-2066. The PRO-67 is without
a doubt a handheld, as I've got one sitting right next to me. The
PRO-2066 is a mobile scanner.

Shrug. It happens. Don't worry about it.

You drive a $100,000+ vehicle as your "daily driver."
AM General claims the H1 will get 12 mpg around town and 17 on the
highway.
Gas in your neck of the woods is just under $2/g.
How much is the fine, $50, $100?
Just pay it.
Oh...and just how did you know the cop was rookie?
Was he wearing a special rookie badge that you noticed when he looked
down into your driver-side window.

Your name would be Emilio, would it?

3083. To Decent Conservatives and Recovering Republicans:

Newsgroup: rec.radio.scanner
Date: 2004-11-01 23:42:14 UTC
From: marklinbuyer@yahoo.com
Message-ID: <9075af62.0411011542.19223e1@posting.google.com>
Source record: 17298

To Decent Conservatives and Recovering Republicans:

In your heart of hearts you know Bush is a miserable failure.
From having no plan on what to do in Iraq once he conquered Baghdad to the 380 missing tons of explosives that could be used to kill our brave young men and women, this guy doesn't have a clue how to fight and win a war. You should see the mail I've been getting lately from our troops over there. They know how much the Iraqi people hate them. They are sitting ducks anytime they go out on the road. Many believe we are not that far away from a Tet-style offensive inside the Green Zone with hundreds of Americans and Brits killed.
Bush refused to go after and capture Osama bin Laden. He fought, every step of the way, the investigation into the 9/11 attacks. Who on earth would oppose such a thing? If 3,000 people died at your place of work and your boss said we don't need to find out why or how it happened, he'd be thrown out on his ear. Bush's behavior after this great tragedy alone is reason enough for his removal.
You already know that George W. Bush is the farthest thing from a conservative. He's a reckless spender who has run up record-breaking deficits and the biggest debt in our history. He believes in having the government pry into everything from your library records to your bedroom. He has hit you with hidden taxes with his tax cuts for the rich.
I know many of you don't like Bush, but are unsure of Kerry. Give the new guy a chance. He won't raise your taxes (unless you are super-rich), he won't take your hunting gun away, and he won't make you visit France. He risked his life for you many years ago. He's asking for the chance to do it again. Scott McConnell at The American Conservative magazine has endorsed him. What more do you need?

No. It's a simple 200 channel conventional scanner with Signal Stalker
that finds nearby transmitters and switches to that frequency.

But, for $55 (which apparently was a today only unadvertised sale at a
few RS's), it's a DAMN good find!

Heck, even at $119 (the regular price), it can't be beat.

3090. Stealth Handheld Scanner Antenna?

Newsgroup: rec.radio.scanner
Date: 2004-11-02 05:00:30 UTC
From: listen@here.net
Message-ID: <11380359ROBOTLX@198.80.55.250>
Source record: 17205
Cross-posted to: rec.radio.scanner,alt.radioscanner

About 10 years ago, a kind soul sent me plans for
a stealth handheld antenna.

It consists of:

- 1 BNC plug to fit the scanner
- 1 3.5mm phono plug to fit the scanner
- 1 3.5mm phono jack for headphones
- 1 variable capacitor

The entire unit fits into the bottom half of
a 35mm film cannister and is ruggedized by
potting the works in hot melt glue.

The capacitor is tweaked to provide best gain.

The idea is to plug this unit into the scanner
RF and headphone connectors, and plug a walkman-style
headset into the unit.

The antenna is the headphone cord which is capacitatively
coupled to the scanner antenna input.

I built one and it works great!
That was 10 years ago, and I have lost the plans.

Can anyone point me to them?

I have a friend who wants to build one.

Actually you are officially licensed and can start operating
as soon as your license appears in the FCC database. They tell you to
check frequently as the license may appear in the mail some time
later.

Sounds like a good idea...probably works better than those short stubby
antennas, especially when you consider that the receiver is likely to be
kept in your pocket or near your body. The headphone wire would provide
more capture area for the signals, although it is likely to have limitations
on which bands it receives well.

>
>
Yes,
The bicone (or biconical dipole) is an excellent broadband antenna with
bandwidth characteristics exceeding 10:1 when properly constructed. Ideally
the two cones are just that- a pair of cones, not an array of spokes. Of
particular importance to the hi frequency performance is that the tips of
the cones come to fine points. Maintaining this geometry extends the hi end
bandwidth.
A bicone will exhibit approximately 2dB gain over a discone. A discone can
be thought of as a degenerative form of the bicone, where the flare angle of
one of the cones is extended to 180 degrees-i.e. a flat cone = disc.

Hi. I'm on Long Island NY, been scanning for a couple of years. Have a RS PRO-94 and an Icom R2. Listen to Suffolk Co. 800MHZ talkgroups, and anything else I can hear from 30-1300MHZ.
Listening to election-related police/sheriff/other transmissions today, on talkgroup 48112 on Suffolk 800 trunkgroup. No real problems (only mostly just people short of supplies, and some broken handles in booths), but I was wondering if anyone out there in Florida and Ohio (or anywhere else, for that matter) are listening in on activities. Be REAL curious to hear about problems in those places! Scanner listeners should be a good source of info, before it's "filtered" through media outlets.
Happy Listening...

RS does still carry the Uniden TrunkTracker, but only by special
order, and it is a whopping $599 plus tax, Canadian.

What I'm going to try, now that have moved to a new residence, it
connect my whip antenna, to a coax, then mount it until it touchs the
ceiling, via coax and BNC. As for making 121.500 my priority, I
prefer our local fire dispatch. If there ever was a plane in
distress, in or near Calgary, I would hear it, as well as scanning
121.500. When an aircraft is in trouble, here in Calgary and area,
CFD is notified an is called to the scene, their code for it is AC
(one, two) etc.

From: Ralph <Ralph@none.com>
Message-ID: <mq6dnebQbrYNDRXcRVn-qw@giganews.com>
Source record: 17235

I see a bunch of sites that rebroadcast scanner audio from the city they live in.
I wonder if this is actually legal to do?
The law states that the communications you hear are only intended for the listening party and the contents may not be divulged.

How is it that so many people broadcast live scanner audio?
I ask because I'd like to do the same but it seems as though it is illegal to do so.

Can anyone give me the facts on this?

Thanks Much!

It is unencrypted.
It is a single channel repeater that is digital apco25.
I really doubt I'd have any issues with phone or private interconnects being
a single channel system.
I'm also not really looking for a listening audience.
It is more for a few local friends that do not own digital radios.
I guess I will make the system available but I think I'll hide the link and
also require logon.
Then I should be OK unless my friends give out the info!

I still question the legality however.

Perhaps

a) Nobody on this NG uses it, or
b) Any that do use do not think it worth commenting on.

Possibly the "silence speaks volumes".

> (Is the scanmaster airband discone that nevada sell
> worth it's price tag) rgds all from M3PAC....

Being an antenna nut and regular listener to aircraft
communications, I, too, would like to know.

I presume you mean this antenna:
http://www.nevadaradio.co.uk/acatalog/scanmaster-airmaster.html

It is sort of a bi-cone antenna and sort of
a "dipole cluster" antenna.

The same basic idea (dipole cluster) is used in the
Antennacraft Scantenna ST-2:
http://www.grove-ent.com/ANT7.html
but this one is not optimized for the aircraft bands.

The discontinued Channel Master 5094A Monitenna
is much the same and has proved to be a good
monitor antenna for me for the "public service"
bands. It, too, is not optimized for the aircraft bands

The Scanmaster Airmaster should work pretty
well just by looking at it but one never knows until
they are in place and operating.

I created and moderate and aircraft listener's group
http://groups.yahoo.com/group/AirCommSouthwest/
of nearly 600 members and I posted an inquiry
about the Scanmaster Airmaster but apparently
no one has had experience with one, though the
inquiry did start and aircraft monitoring antenna
thread.

One problem in the U.S. is that no one seems to
sell the Airmaster, at least, I can't find a retailer.
One may be able to buy them from the U.K.
though.

I did buy a so called "Double Discone" (bi-cone)
on eBay and have yet to try it but it looks like

one could make and Airmaster out of it by
cutting the elements. It would be nice to have
the element dimensions from the Airmaster.

Here is a description of the "Double Discone:"
http://www.radio-ware.com/products/ant426.htm

Here is another option:
http://www.ssejim.co.uk/vhfairbandant.htm
http://www.ssejim.co.uk/uhfairbandant.htm
http://www.ssejim.co.uk/dip2002abeu.htm

I did buy the last item from the U.K. and it seems
to work well. I have separate antennas for
VHF and UHF aircraft and then combine them
into a single coax feed.

Another option to combine VHF and UHF aircraft
antennas would be the CF-142:
http://www.cometantenna.com/products.php?CatID=3&famID=23&childID=44

From: Richard

I am a RadioShack Dealer in Georgia. Yes that was a mistake! They will
go on sale for a few hours the day after Thanksgiving for $59.99. Each
store will have a limited supply to sell at that price otherwise they cost
us about $80.00. RadioShack price protection does NOT apply to "Hot
Friday" (the day after Thanksgiving) sales. We just got our first shipment
in Monday, and they are NICE. However RS has no idea when the software
will be ready, Don at Starrsoft.com does not have the software either.
It is nice and the stalker function works well, our 911 service bought
one today to use as a freq. counter.

/Richard

> 903.0000 - 905.0000 with 12.5Khz step WIDE FM (Headset

I found a Wendy's frequency of 902.300 MHz, but I was sitting
inside the restaurant searching the 902 - 928 MHz range.

A local McDonalds uses 921.95 MHz, but as with Wendy's,
I have to be in the area of the parking lot to hear
the low power signal.

I'd tend to say it may be noise generated from a computer or other nearby
electronic gear.
If he can still hear it then he should be able to start shutting down
electronic devices one at a time and see if it goes away.

Hams are not required to carry proof of license *by Federal law*
to operate radio gear. I believe the requirement to have a copy of
the station license at the station still applies, not positive if
that requires a copy at the mobile station.

Hams can be required to carry proof of license *by state law* *for
laws that provide exemptions to hams*. You couldn't be prosecuted
for not carrying the license, but you might not be given the exemption
such a law offers and so might be prosecuted, not for not carrying the
license, but for breaking the law that you lost the exemption for.

IMHO, (with a few facts thrown it)
If you operate ham gear where your at, your required to have your license.
If state law requires you to be a licensed ham to operate a mobile scanner,
your required to have your license in your possession. This isn't rocket
science.
Its common sense. If you break the law or make a fool out of yourself
showing
the nice police officer things that an intelligent person would keep to
themselves,
you pay the price, learn from it, & become a better man for
it.....
Forget this crap about trying to prove everyone else wrong, if you really
want to
save face, be a man - forget it - & move on. Pay the dumb fine,Going to
court,
wasting taxpayers time and money trying to prove your something your not is
stupid.
That's what got you into this mess to begin with. Look it up - the law
tells you when
your to have your license in your possession.

As state laws can vary I can't comment on that as the state I live in does
not seem to have any "radio or scanner laws" that need proof of ham
licenses.

The FCC only requires your name to be in the data base. That means for new
hams they can operate as soon as they find their call in the database on the
internet, or someone finds it for them. No paper license is required. This
may only take a few days from the time the test is taken depending on how
fast the results of the test is sent to the FCC.

First thing to do is shut off the main power to the house at the box. If the noise goes away, it's something plugged into AC inside the house that's creating electrical noise hash. Start isolating which circuit it's on by throwing individual breakers back on until the noise comes back.

It could also be a piece of power line hardware going bad within several blocks of your location. Weak power line transformers can create all kinds of noise hash and still conduct electricity just fine for years. Eventually they give up the ghost, but it's next to impossible to convince a power company to fix this problem until it actually blows.

I can not get my PC software to properly read the S-meter on the R10
via its CI-V jack. Frequency and mode data flow properly both ways,
but not signal strength. I have tried two different programs: Ham
Radio Deluxe and ScanStar.

Is anyone seeing valid S-meter readings from their R10 on their PC?

Walking around with a portable AM radio is a good way to track down
power line or circuit interference.

> What is your favorite scanner-related yahoo group?

There are many good Yahoo radio groups.

Many are intended for a specific geographic
area so what might appeal to one person may
not appeal to another.

I could tell you which ones I belong to but
I live in northern California. I used to belong
to general Yahoo scanner groups with no geographic
component but over time, I dropped them all.
The local ones can often answer the same
types of general questions.

Some groups are subject-specific and not
geographic-specific but some can be both.

Some are for specific receivers/scanners which
can be very helpful.

If you have specific scanner interests, try to
refine your search. The words in each Yahoo
group's description seem to me the ones Yahoo
uses in their group search database.

In the search box at:
http://groups.yahoo.com/

If you are interested in:
railroad communications, try scanner railroad
aircraft communications, try scanner aircraft
digital communications, try scanner digital
scanner antennas, try scanner antenna
etc.

Some groups will appear more than once with
different searches since well-written descriptions
include the all the topics the group covers.

Be creative with your searches.

Another choice is to join one or two Yahoo groups
and if they are reasonably active and you find that
you like them, ask your same question there. You
may get a better response than here. Also list your
specific scanner interests when you post to them.

If you want to reduce SPAM that can be generated
by joining Yahoo Groups, after you join, go to:
http://privacy.yahoo.com/privacy/us/pixels/details.html
and scroll down to the blue "click here" on the right
side of the screen.

I'm very new to this whole world of 2 way radios and scanners.

I'd like to make this into a new hobbie and I'm not sure which direction to take. Scanners are for passive listening, I figure with a scanner I can listen to the towns policemen and fire as well as what the pilots are saying in their cessnas and small jetplanes.

I live in a small town of roughly 27,000 people and there should be plenty of things to pick up on a scanner.

Only, can a two way radio pick up the same stuff as a scanner? With a Two way CB radio can I talk to people in my town as well as the next town over north and south of my town? There is about a 5 to 8 mile separation and we do have some topography here. I'm only planning on using a simple indoor antenna, a desktop unit.

Is a scanner the better deal? With a scanner can it pick up so many more signals than a CB? With a scanner will I have more stuff to listen to than a CB? Do scanners have a larger bandwidth? Is that what it's called when the unit can pick up more channels than another?

TIA!

Get both! A scanner typically is 30mhz and above. CB is in the 27mhz range.
There are a few scanners that cover the CB band (Radioshack Pro-95 for one).
In order to talk to the other towns on the CB you will more than likely need
a outdoor antenna. Do a google search on ham radio/scanners/shortwave and
you should find TONS of info on it.

Man Overboard Software is pleased to offer a no-compromises control program for the Icom IC-PCR1000 computer-controlled communications receiver. MacR-1000 manages frequency lists, supports band searches (with lockouts), CTCSS tone searches, and frequency-list scans. Frequency lists can be imported from tab-separated text, CSV files, and .dbf files; export to tab-separated text and CSV.

Saving of frequency lists is disabled until a registration code is purchased for $21.95.

MacR-1000 requires a serial port and Mac OS X version 10.3 or later.

Visit <http://software.manoverboard.org/> for more details, including the complete user manual.

Oh my God. I just checked what was on the market and I think it's so strange that these Scanners and CB radios have shrunk/gotten so small. Before these radios took up whole rooms, and then they took up the space of a tower desktop computer -- just like in the pictures. Now I see both Scanners and CB radios that are all hand held that look like they run on batteries. What type of batteries I don't know if they are the simple AA Alkaline or Lithium Ion or whatever. I don't trust those small hand held scanners with their attached antenna on them. Firstly, they don't look very powerful -- becuase of the small size I'm afraid the range probably isn't too great. And secondly, what if it breaks? That compact size would make it imposible for someone to repair it, also being so small I would imagine it might heat up too hot if you run it for too long and have some serious concequences on the internal circuitry. Won't it heat up and melt the electronic stuff inside if it's that small and compact?

Obviously much of the scanners and CB radios are not what I had in mind. I was thinking it would be a flat Desktop unit about the size of a lap top computer only shorter and thicker with an attachment for whatever antenna on the back. Something that plugs right into the 120 Volt outlet instead of running on batteries. I can't believe this, the batteries on these new CB's and Scanners probably don't last long at all. I would imagine that they run out in an hour or so.

Please tell me it's not as bad as I think they might be. I was looking at Radio Shacks online catalog selection. Would anyone recommend radio shack or is it always best to go to a different electronics store in town that's family owned and operated?

What is the life expectancy of these new radios?

3176. Mac OS X control software for Icom PCR1000

Newsgroup: rec.radio.scanner
Date: 2004-11-10 01:05:30 UTC
From: fritza@manoverboard.org
Message-ID: <82b0b610.0411091705.12671e69@posting.google.com>
Source record: 17191
Cross-posted to: rec.radio.shortwave,rec.radio.scanner

[The following seemed not to propagate out of my home ISP. Sorry if, in obedience to the Demo Gods, the original shows up and makes this a duplicate.]

Man Overboard Software is pleased to offer a no-compromises control program for the Icom IC-PCR1000 computer-controlled communications receiver. MacR-1000 manages frequency lists, supports band searches (with lockouts), CTCSS tone searches, and frequency-list scans. Frequency lists can be imported from tab-separated text, CSV files, and .dbf files; export to tab-separated text and CSV.

Saving of frequency lists is disabled until a registration code is purchased for $21.95.

MacR-1000 requires a serial port and Mac OS X version 10.3 or later.

Visit <http://software.manoverboard.org/> for more details, including the complete user manual.

E-bay is often "let the buyer beware". At least the guy seems to be trying
to make it very clear what kind of shape the thing is in, when he describes
it. His choice of words in the title was probably more to get your
attention.

3184. Florida Mil Acft Comms, Tuesday 9 Nov 2004

Newsgroup: rec.radio.scanner
Date: 2004-11-10 06:48:35 UTC
From: allanstern@aol.com
Message-ID: <20041110014835.06251.00000206@mb-m27.aol.com>
Source record: 17199

Tuesday, 9 Nov 2004

Interesting day of comms with a great variety of acft types:
DC-8, P-3C, T-38, S-3B, C-37A, T-45, KC-135, C-141, E-8C, F-16, C-130, and one huge Ukrainian Antonov AN-124. Even a US State Dept Cessna Caravan! It just does not get much better than this.

AIR TRANSPORT 710: DC-8, Air Transport Intl (USAF Contractor).
8:25am: Lands Patrick.
1:33pm: Departs Patrick, probably to Antigua.
[133.75, 132.65]

LIMA LIMA 19: P-3C, Jacksonville NAS VP-30 "Pro's Nest" Sqdn.
8:40am: Area transition.
[119.825]

NASA 909: T-38N #65-10351, Johnson Space Ctr, Houston.
8:59am; Lands Shuttle Landing Facility.
1:10pm: Lands SLF again.
[124.8, 132.65, 128.55]

SCOUT 11: S-3B, Jacksonville NAS VS-24 "Scouts"
9:30am: Over Lake George, departs Pinecastle Range to NAS Jacksonville.
[357.0]

SPAR 30: C-37A #01-0030, MacDill AFB 6AMW 310AS
9:51am: Up with Oakgrove on AICC.
[364.2]

SAM 8172: VIP flight.
10:00am: Area transition.

TOPCAT: S-3B, Jacksonville NAS VS-31 "Topcats"
10:40am: Comms with Alleycat (Razor 88's back-end c/s)
[292.2]

SCOUT 04: S-3B, Jacksonville NAS VS-24 "Scouts"
10:44am: Orbiting on Pahokee 330 radial, 3-18 DME, 12,500 ft, left-hand turns.
[349.0]

CD 212: T-45A, Kingsville NAS TW-2 (Single ship)
10:49am: Working in offshore Whiskey area; comms with Sealord.
[267.5, 351.8, 377.05]

SLUFF 84: KC-135R, Rickenbacker ANGB, OH-ANG 121ARW
11:02am: Patrick-Patrick round-robin clearance. Is told "Rcvr acft has taken off; contact on 293.525 when you get to Robins; will meet up with you at 1800z."

11:25am; Departs Patrick.
[118.4, 133.75, 132.65, 372.2]

DECEE 91, 92: C-141Bs, Andrews AFB 756AS
11:12am: En route Luke AFB; pilot spelled c/s (I used to think it was DC ##).
[135.475, 119.825]

N4667B: 208B Cessna Caravan, US State Dept Intl Narcotis Mission, Patrick AFB.
11:15pm: Local ops.
[133.75]

RAZOR 88: E-8C JSTARS, Robins AFB
11:50am: Gets FL240-310 altitude block for orbiting; to KMLB 142 radial at 77 DME, then Craig.
[119.825]

ALLEYCAT: Back-end (Mission) Callsign for RAZOR 88.
12:44pm: "MacDill 250 radial at 12."
12:50pm; Passes coordinates to acft EVIL 10.
[388.225]

PISTOL 31: F-16, Shaw AFB
12:47pm: Low approach at Patrick, then continues to Shaw.
[269.3, 281.425, 269.375; air-air on 141.9]

TERRA 5: JSTARS Melbourne Ground Station (Northrop Grumman)
3:57pm: Comms with T-3/Tango 3 acft.
[231.75]

MADFOX 22: P-3C, Jacksonville NAS VP-5 "Mad Foxes"
4:42pm: Inbound to Patrick, touch-and-goes, RTB KNIP.
[133.475, 132.65, 133.75, 269.375, 124.8]

KING 24: C-130
10:00pm: PJ drops, then pattern work at Patrick.
[133.75, 251.9]

VDA 4977: AN-124, Volga Dnepr AL (NASA/USAF Contractor)
10:07pm: Departs to Vatry France (LFOK).
[128.55, 132.65, 132.25, 119.825, 134.85]

___672, 673, 676: Sounds like T-45s
11:56pm: Working in Whiskey Areas; comms with Sealord. Sometimes callsign sounded like "WN 672."
[284.5]

Ebay item #: 5730774971

Auction Ends: Nov-14-04 19:13:56 PST

Direct link:

http://cgi.ebay.com/ws/eBayISAPI.dll?ViewItem&item=5730774971

My Ebay Feedback rating is 100% positive.

Ebay user ID: righteous-jude

I'm selling a FM Stereo transmitter which is well-known as being the best transmitter you can get for the money. It is fully assembled and not a kit. You'd have to buy a commercial brand FM exciter (such as a Harris) to exceed the specs of this unit. On virtually all FM receivers you would not hear the difference.

You could hook up and transmit any sound source you want, such as:

1. The sound output directly from your computer (to play MP3's) using iTunes or any software you like.

2. Directly connect an iPod, CD Player, tape deck, etc. right to the transmitter.

3. Use a professional mixer board. A decent Behringer UB802 Mixer is only $49. Then you could mix and cross-fade between two different stereo sources LIVE. Add a decent microphone ($19) so you can talk and people won't know you aren't a commercial station until they realize "Hey, why aren't there any advertisements?"

This FM transmitter is DIGITAL (not analog) and can equal the sound of commercial FM stations. It can transmit anywhere between 88-108 MHz. It outperforms ANY of the Ramsey or other so-called "kit" transmitters, including the "export" version of the FM-100B which Ramsey sells for $429.99 - which is WAY more than the cost of the transmitter I'm selling.

Depending on the quality of the antenna you connect to it and how high up in the air it is, it is possible to get about a 1.5 mile range using a simple homemade antenna, or over 5 miles of range with a $100 pre-made roof-mounted antenna.

This transmitter has a filtered RF output which means it puts out a clean signal. RF filtering is important to avoid interfering with other FM stations, or if you intend to add an RF Power Amplifier to increase your range. Most other low cost FM transmitters have bad RF harmonic supppression which means they cause a lot of interference to TV's and

radios in your neighborhood, which will attract attention to you from people like Cable TV technicians (something you definitely want to avoid).

For the technical stuff:

This transmitter uses 16-bit Direct Digital Synthesis (D.D.S.) modulation of PLL carrier using 48-KHz 16-Bit digital oversampling, just like the Harris and other Digital-type FM Exciters do.

This transmitter design DOES NOT use the "BA" or "Rohm" analog chip - ANYWHERE IN IT AT ALL. Which is a good thing.

The heart of the transmitting circuit is a DSC (Digital Signal Controller). This is a 16 bit DSP microcontroller with on-chip Flash, RAM, A/Ds, PWM, and 200k of EEPROM.

D.D.S. modulation technology is used to generate and modulate the carrier signal of higher quality FM Broadcast exciters.

I won't give away the complete design, but the heart of it uses a Cypress Semiconductor DSC.

A Motorola-designed Class-A linear wide-band amp module (originally designed for use by cable-company operators as line transmission amplifiers) results in virtually no unwanted spurious harmonic output, high reliability and EXTREME SWR ruggedness. The RF output of this transmitter will withstand greater than a 30:1 SWR mismatch without failure.

I won't list all the details here, you can learn them all by going to http://www.Ebay.com and entering item # 5730774971 using Ebay's "Search" feature. It will be available for the next 7 days.

Here's a link for info about a good, affordable audio mixer:

http://www.musiciansfriend.com/srs7/g=rec/search/detail/base_pid/631238/

And lastly a good inexpensive microphone:

http://www.musiciansfriend.com/srs7/g=live/search/detail/base_pid/270490/

You'll also need a mic cable:

http://www.musiciansfriend.com/srs7/g=live/search/detail/base_pid/332001/

A suitable 10-foot XLR mic cable is $10.

http://www.musiciansfriend.com is a good, reliable and affordable Internet seller of music-related gear. If there is one located in your area, Guitar Center also carries this gear.

To avoid unprofessional noise while talking, don't hold your microphone, put it on a desk stand. The best deal for this item is, believe it or not, the Radio Shack model 33-370 for only $7.99.

Regards,

righteous-jude

Well, there's an initial review posted on RadioReference; and Larry Van Horn of MT has, I'm pretty sure, been playing with one a bit. If you don't need digital trunking (which is becoming real big here in Maryland), it seems like this has got the fast track to 'gotta have it'

Having been born and raised in Minnesota, I can tell you that it is one of the most restrictive states in the country. All kinds of extra red tape, regulations, and restrictions apply here.

This and the sky-high levels of taxation are why I moved myself and my business across the border to South Dakota several years ago.

Larry Van Horn shared some very positive comments on the Chattradio list on Yahoogroups around Nov 8, 2004.

He had been involved with the Uniden beta testing of the 246.

His only "negatives" were that the scanner wouldn't do digital trunking, and couldn't receive mil-air.

Larry mentioned that Monitoring Times would have a review of the scanner in their December issue.

The only difference between E-Bay and the DIRTY
SMELLY BUMS lying their asses off selling useless
broken crap at the hamfests of the past is one is conducted
live while the other is done in cyberspace.

....adleast on e-Bay you don't have 2 put up with "hamfest smell" ;)
:) ;)

Actually, I'm surprised eBay didn't yank his auction for using their
service to peddle contriband (an unblocked scanner) to a US market.
That happened to someone else selling an MK2 a few months back, and
that seller was far less obvious about it.

3205. FS : YAESU VX-2R dual band wide receive HT package

Hi All

I recently got hold of a 5K+3 and a companion SDU-5000. All is nice
and dandy

Except...

I need a serial (special) cable from the RX to the SDU unit.

Anyone able to supply a pinout please ?

I have the parts ready and solding iron all heated up.

Well, 'mint in box' is not a very good way to describe a radio that has scuff marks, surface
scratches, and the date plate being rubbed.

Pretty simple.

Attending a conference with parallel sessions in different rooms, I was able to keep track of all activity by scanning for their cordless microphone frequencies. Often the microphones have labels on them giving a clue as to what range to scan. Wide FM mode.

I was able to enjoy the Nifteaux report, departing just in time to ask Snarles pointed questions in room B.

What an ignorant, back ass statement. Hey buddy welcome to this century ebay does millions of transactions a day and most people are happy. A good deal may I remind you is where the seller and the buyer are happy and ebay generally accomplishes this. If a buyer is to stupid, to do his homework or is incapable of showing restraint in bidding well then too bad. This is a CAPITALIST country you know.

Finally there are plenty of deals on ebay and there is plenty of money to be made selling on it. I have never been "scammed" and using paypal or a credit card is prudent and provides another layer of protection so, obviously you just don't get it or are incapable of grasping that business and the way goods are sold is changing and will change forever.

Larry Edwards mentioned in passing :
>
> Scott Peterson Guilty! Are we safe now?

I'm just glad that the major news networks gave us a detailed history of the case now that it's over. The detailed coverage they've been running for the last two years whenever there's a slow news day just didn't give me quite enough insight into the case. I mean, I am still wondering why this case is more important than the thousands of other murder cases in the US... therefore I must not understand the case... I need a Scott Peterson Network : All Scott Peterson all the time.

obl-FRS :My XAct radios worked very well at Disney last weekend. Everybody else had "privacy codes" and I didn't, which means I got to hear them but they couldn't hear me. Very interesting.

Sadly, there are many other whackos out there just like him. Who needs terrorists from abroad, we have our own! We may sleep, eat, or work with them. They gain our trust. Then the kill. How many murders do NOT make "national" news. No disrespect to the deceased - this case isn't much different than many others. What pisses me off, is that many are going to make money off the memories of Laci and Conner. Most likely, the prick headed to prison will - as well! His memoirs. I wonder if he made any cash off the movie of the case before it went to trial? That is just do wrong.....

I think you are a confused troll with little understanding of the point
of the criminal justice system much less its execution, which is what
Scott Peterson should soon face.

--
So I was feeding the hummingbirds but not changing the feeder sugar
water quickly enough and it fermented into something like that stuff
that Hunter S Thompson was drinking in the Rum Diary, anyway, so I had
these drunk birds flying everywhere just like mosquitoes in Minnesota,
dashing up one side of me, darting down the other, crashing into the
windows, falling off their perches, didn't even know they perched,
flying backwards, flying backwards, it was like something out of the
Exorcist. After a while though, I got bored with it all. Next Summer I'm
going to Alaska to feed french bread soaked in Wild Turkey to polar
bears. Wish me luck!

I couldn't agree more, BUT..... the way they were talking about the jurors that were released, I smell appeals up the ass - coming down the pike and he may not see his just due.

I must wonder, just who is paying his lawyers fees. MG didn't come cheap! And to keep appealing? I know freedom often comes with a hefty price - but wow..... Just goes to show, even a high class (high cost) - "celebrity" attorney - couldn't save his ass (at least at the onset). Maybe he needed a "Dream team" too! They got the juice "flowing" again!

I wonder if SP has been anyone's prom queen yet?

To be honest, it is a shame - beginning with the "O.J." trial and now this one, that people had to die to make these high class courtroom dramas unfold and in many respects, make a mockery of the judicial system. They were more circus atmosphere with some of the attorneys giving one liners to make jokes - in a very serious process. HOW SICK..... I think the judges should hold these people in contempt when they violate the respect of the deceased and the judicial system. I've watched many other murder trials on Court TV - you sure don't see much laughter and joking taking place. NOR are there any lawyers trying to be comedians or movie stars. Better yet, take the damned TV cameras back out. We all know what goes on. We've seen enough. The dead are paying for it.

I am looking for a way to better organize the way I have my scanner porgrammed. I have a total of 6 trunked systems programmed--5 for one state and 1 for the state where I am currently living. Additionally, in one bank I have coventional and trunked frequencies programmed. It's my understanding that this is not effective to have it setup this way.

I don't program in all the frequencies for the trunked system, just the ones that are needed for the scanner to start tracking transmissions. This results in most of the channels in each bank being unused. I also don't program in all the talkgroups for the trunked system.

I only have two convential frequencies that for police use. I also have a few air frequencies. Should I combine the police/air frequencies into one bank or put them in seperate ones? The scanner that I have is the bc-250d

Great Caesar's Ghost, people. Is this is what people waste their time
watching on TV? Not enough NFL football?
Tired of WWF Wresting? Can't find American Chopper? Had your fill of Donald
Trump?

Must be since Oprah is getting bland (you know how the episode is going to
end), and Dr. Phil isn't new anymore.

The only thing missing from this media frenzy are the court room spectators
running outside twirling colored towels
as they did with the Martha Stewart trial looking like fools.

The lawyers were auditioning for roles in for The New L.A. Law or some dambed thing.

Then there's the play by play on Larry King Live.

Next up is Michael Jackson's trial. What a circus that is going to be.

But figures..

It is Americuh.

3237. Which Scanner for Bucks County, Pa???

Ok having recently moved to Upper Bucks County, Pa (Quakertown-Hellertown) area and finally unpacking my radio gear, I need to upgrade my scanners to the wonderful new world of Digital!!!

So here's my question.. Which if any would give me the most bang for my bucks??? I'd like to find one that would allow me to listen to the local Bucks-Lehigh-Northampton PD-FD-ETC. and if possible the option of still keeping an ear on the digital system in use in Philly. Does such an animal exist???

Thanks

WE DO have better things to do. It just happens, this is the so called end of a murder case made into a very public issue. The bastard needs to be put to death. The lawyers are getting sickening with their court room antics, knowing they're on TV. As for Michael Jackson, I don't know of any grown up who "sleeps" with kids. HE TOO deserves any thing he should get - if proven guilty. As for Martha, she accepted her punishment - guilty or not. In a couple more months, she can put it all behind her. I don't agree with any play by play either, especially days after. They beat a story to death. But that is the media. An institution which has gotten out of hand in more ways than one. As for crowds gathering outside and such, it just goes to show - they take interest. Pro or con the individual on trial. It shows people care - sometimes too much! As in riots when certain trials were held and a verdict adverse from the crowds wishes. It isn't like we don't give a damned what goes on around us. Some things - there are just no easy answers or solutions to - to end.

You must do pretty good watching TV yourself to know how those shows play out. I just said I watched "court tv"! And that isn't very often - but I seen it enough to know those trials aren't made into a circus.. I rarely watch tv because of all the bull shit. Actually, I use TV to fall asleep - because it bores me.

And it is AMERICA.....

It is good to have it covered, BUT as I and another pointed out - with no disrespect to the dead, there are many others who have died in similar cases. Some show I was watching on TV last night as I was waiting to fall asleep - even stated the same. It is more common than believed. So, what warrants one to be covered more than another? In O.J.'s case, he was popular - it doesn't make it alright, but you can understand the why - but who the hell was Scott Peterson? A NO BODY. How was it his case made headlines nationally?

Covering a story isn't so bad, but as I said in another post - they beat it to death. They act like people are too stupid to understand what is going on. They keep asking the "consultants/professionals" the same questions over and over in several formats. One channel here says he faces the death penalty. The choices of the jury are life in prison OR death by lethal injection. No one made that decision yet - for anyone to jump to a conclusion. That news channel could easily have said he faces "life" or listed the both options ahead. But NO, they want to be the one to say DEATH. Sensationalism. Albeit, I agree he should get the Death Penalty. It just sucks how the media blows this shit out of proportion to make themselves look better. I want the truth, not hyped up bull shit. Even if the SOB never sees the light of day, at least others may will be safe - from him (at least).

Once the decision was in, I jumped off the station and went back to work.

Any of the digital trunkers can also handle analog, no problem.
There are some differences, though; for example, the PRO96 cannot be computer controlled - only up/downloads, the Unidens can. The PRO96 doesn't do MilAir out of the box (and even when opened up using Win96, not always very well), the Unidens do.
On the other hand, the Unidens have a proprietary battery pack, while the PRO96 can use standard AAs.
You can check out a few facts and comparisons on the Strong Signals website (they have message boards devoted to each of the digitals), Radio Reference (numerous boards here) and also here:

http://henney.com/chm/links/scanners.htm#DIGTRNK

And of course, there's lots of Yahoo groups for these trunkers. In addition, I'd join the Phillyscanner Yahoo group - likely you'll get lots of opinions about the digitals there.

FM Stereo Broadcast Transmitter
Digital PLL - LCD - 2 Watt RF Output

Ebay item # 5730774971

Auction ends in 1 day!

Ends Nov-14-04 19:13:56 PST

I have updated my Ebay auction listing to include an MP3 sound file you can download which is an ACTUAL recording of how the FM transmitter sounds on-the-air.

Here is the direct link:
[URL=http://cgi.ebay.com/ws/eBayISAPI.dll?ViewItem&item=5730774971]http://cgi.ebay.com/ws/eBayISAPI.dll?ViewItem&item=5730774971[/URL]

Transmitter is an assembled and tested unit -- not a kit.

This transmitter design DOES NOT use the "BA" or "Rohm" analog chip - ANYWHERE IN IT AT ALL. Which is a good thing.

This transmitter can equal the sound of commercial FM stations. It outperforms ANY of the Ramsey transmitters, including the "export" version of the FM-100B which Ramsey sells for $429.99.

You can buy this transmitter for much less than that.

Here are the specifications for this transmitter (from the manufacturer):

Transmission Frequency: Adjustable between 87-108 MHz
Tuning Steps: 10 kHz
RF Power Output: Typ 1Watt @ 13V or 2 Watts @ 24V
Spurious RF Emissions: Better than -45 dB ref. to carrier
Frequency Stability: PLL Typ +/-1KHz
SWR Ruggedness: Withstands 30:1 SWR mismatch
RF Output Connector: BNC type
Audio Input Sensitivity: 0.8V rms for +/- 75 KHz deviation
Signal To Noise Ratio: 60 dBu
Frequency Response: Flat from 20 Hz to 15 KHz
Stereo Separation: >40 dB
Pre-emphasis: 75 uS (standard FCC spec for U.S. FM radio)
Audio Distortion: Better than 0.2 % THD
Audio Input Connectors: RCA Phono Jacks
Power Jack: Coaxial type, 5.5mm O.D. 2.1mm I.D. center positive
DC Power Input: 12 to 24 Vdc Regulated 600mA

The transmitter has a built-in user options menu system with two buttons for adjusting operating parameters such as transmitting frequency, modulation level, MPX pilot level, etc.

This transmitter has a clean RF output. The design includes a seven-element Low Pass RF Filter for harmonic suppression.

This transmitter has built-in audio AGC (Automatic Gain Control). The AGC feature can be adjusted using the user options menu or you can turn it off if you like.

Operating instructions will be included with the unit.

I have to think this was a troll. I love Ebay. I have bought and sold on it
for 5 years or so. I only got burned out right 1 time. Was some $5.00 toy,
so I did not loose any sleep over it. I have bought all kinds of stuff that
I was having trouble finding anywhere else. Several times when I was looking
for something I could not find I would as a last resort check them, and
there it was. I do my research, bid no more than about %60 of what something
would cost me from a brick &mortar or online dealer. If I win great, if not
and I need something in a hurry, I can always just order it. years ago when
I decided to up grade my reloading equipment I found some great deals on all
the stuff I wanted, got rid of all the stuff I no longer needed, and some of
it sold for more than I paid new!
If you have some common sense, and READ the reviews you can get good, to
great deals, and, in my case at least often find items that I just could not
find. I love the place.

I lived in Blanchester Ohio a few years back. We had a murder trail without even a body or proof she was dead. He was found guilty and sentenced to life. I was betting they didn't have Peterson! I'm not saying he isn't guilty, just that the proof was lacking.

I think he's a Tom Ripley, thankfully caught before he killed again. In
the book, Ripley commits his first murder out in a small motorboat and
dumps the weighted body overboard, falling into the water himself. Scott
Peterson claims that he couldn't dump the body of his wife out of the
boat he used because he'd fall over into the water. Of course maybe
Peterson really didn't read the book because Ripley was worried about
evidence being found in the boat (decades before the sort of DNA and
high tech sleuthing we have now became available) so much that he
scuttled it. I'm pretty sure both Ripley and Peterson used concrete to
weight the bodies, Peterson even going to the trouble of making his own
custom concrete body anchors.

I find it pretty hard to believe that his wife and kid washed up not too far from where he was fishing - within 2 miles - as a coincidence - if he is innocent.

IF he were innocent, then why try to sell the home, car, and change appearance? Not to mention all the lies on his recorded calls. Didn't take much to convince me he was guilty as sin. HE KNEW she wasn't coming back. Otherwise, if he was so in love with his wife, he'd have held out hope for her return. Meaning he wouldn't have gotten rid of her vehicle, try to sell the house, etc. THAT WAS ALL BS on his part. He didn't love that woman. He was a cold hearted person. NEVER shedding a tear, never showing emotion. He was cold and calculating in my opinion.

Maybe his wife and kid washing up close by was just that - a coincidence, but very very odd. I think I'd have more of a chance of winning the power ball than that happening by "coincidence" to him.

All circumstantial maybe, but in my opinion - all negative on him.

NOW the damned tabloids are saying there is new evidence to get him off or something to that effect. What a crock.
They're another bunch of suck asses. Out to make a buck - on deaths of innocent people.. SCUM RAGS. I laugh my ass off every time they're sued and lose. They deserve it. They're no better than those clown attorneys trying to make actors of themselves on TV. It's to hell with the dead who got me here, let me make a buck. That sucks.

I won't argue that. I've agreed to it as well. We don't know the whole story. We don't know what all was removed from the home - either. To my recollection, they never did divulge that - not publicly that I'm aware of.

3256. Uniden sportcat 150 (sc-150) question about charging.....

Newsgroup: rec.radio.scanner
Date: 2004-11-14 01:24:27 UTC
From: nctrnlboy@yahoo.com
Message-ID: <11d9990e.0411131724.3fca44dc@posting.google.com>
Source record: 17071

Ok I broke out my old uniden sportcat 150 , because I finally bought a new battery for it.
Here is the situation..... when I plug in my wall charger into the sportcat.... the voltage drops down to 1.38 (using the WX and L/O battery monitoring trick) from 1.58 . Also when i am scanning just using the battery pack & plug in the wall charger the "Batt" icon pops up & a beep goes off every minute or so.
I no longer have the manual for the sportcat so I am not sure what this means.... I assume that the batt icon & beeping means that it is the low battery indicator.

Also I would like to know IF the sportcat can operate with the battery pack out of it & the wall chager plugged in? Because it wont for me.

I am trying to figure out if I have a wall charger that is bad or the female charging jack(on the sportcat) is bad.

any help?

I <sadly> - have to agree! It's amazing anymore, how dumb some people really are. They can't spell for shit. They can't interpret what they read. You have to wonder how it is they get by in life without being killed just making breakfast. No wonder our insurance rates are so "f&$ked up. There are accidents, and then there is stupidity.

I just cant resist this! I was talking to a friend of my daughter's a few months ago. This girl is 24 years old, and I don't remember why the subject came up but she thought we lived "In the Earth". I had to ask her to explain (I didn't understand what she meant!). She said (Don't we live on the inside of the Earth?). This isn't as isolated as one might think. Another kid (23 years old) didn't know beef came from cattle! I think people are getting less well educated these days. I think tomorrow I'm going to ask a few people "What type of object is the Sun" the answers should be great!

That's a prime indicator that your wall wart (charger/adapter) has died. Don't ask me why, but it seems to be a common happening with the SC-150. Of the three I am personally familiar with (mine and two friend's), both of my friend's wall warts bit the dust. And you aren't the first person to post this problem on here or alt.radio.scanner. It's been a defective wall wart every time. There is a "fuse" wire inside the wall wart on the AC side that breaks if it is overloaded or just gets too hot too many times for too long. That's the way these Class 2 AC adapters are designed. I'm always careful to unplug my adapter as soon as I'm done charging the battery, maybe that's why it's lasted longer than what seems to be the typical lifespan

Not long ago, as a test for a friend, I did power my 150 from the charger only with the battery unplugged, worked just fine. I wouldn't want to do it for an extended period of time, not knowing how the power circuit in the scanner is built, but it can be done.

Take the wall wart to Radio Shack, and match the specs and plug with one of their universal AC adapters, and you'll be back in business.

Any further questions, ask on here, my return email address isn't valid.

3262. Newbie question: Regarding programming UNIDEN

Newsgroup: rec.radio.scanner
Date: 2004-11-14 06:35:46 UTC
From: SYBIL-IZED <WHO_M_I@ADEH.com>
Message-ID: <71Dld.69492$km5.2858107@news20.bellglobal.com>
Source record: 17077

A friend has a Uniden scanner (don't know exactly the model) wants to know
if it can be re-programmed to include trunked frequencies.
Also some police forces are now using frequencies that step and skip(?) so
that they cannot be heard. (don't know the exact term of this) , but can
the scanner be programmed to receive these type of frequencies anyway ?

Last but not least, Can ALL Uniden scanners be re-programmed using a
computer and is it fairly easy ?

Thanks for all the help.

Yep... you were right. POS wall plug! I dug up my old car cigarette plug power cord for my scanner & used that to check the voltage my scanner was recieving & it was something like 1.91. I will use it to charge up my scanner (I have a converter in the house)until i find another "wall wart" I think i have laying around here(from a bct-7). Thanks.

Just curious as I am still thinking about buying a scanner to install in my jeep and a wired remote scanner face (that could be mounted on the dash) would be perfect so I could.... 1. mount the scanner body in an extremely secure area in my vehicle to prevent theft & 2. since it is illegal to have a scanner in a vehicle here.... a wired faceplate would make hiding it that much easier.

Just curious if there is anything like that out there in the marketplace? I have looked & so far have seen nothing.

Well, let's turn the question around -- Is the scanner full? Are you looking for a way to put more systems/frequencies into it? If not, then I'd say organize it the way you listen to it.

The advantage to putting things into separate banks is that (for most scanners) you can enable/disable each bank with a single keypress. For that reason I tend not to put conventional stuff into the same bank as a trunked system. And I tend to spread out my conventional frequencies into various banks (aviation, FRS/GMRS, HAM, etc.) so I can choose which ones I want enabled.

BTW, you might be interested in doing some reading about the new Uniden scanners, like the BC246T. (Google will turn up all kinds of hits for you.) It has no banks -- memory is used more like a computer, or a PDA -- it's just a big place to store stuff. Each system or frequency you add takes up some memory, but there's no artificial limit as to how many you can add.

One was seen in conversation with one of Peterson's relatives (something like that, anyway). The second was doing individual study on SOMETHING -- you're only supposed to consider evidence that was presented in court, not play detective. Not known why the foreman was dismissed, the judge won't reveal that until after sentencing.

> new battery for it.

I have three (I think) SC180B scanners. (The "B" means that the case
is black.) Because I bought them on closeout at Best Buy, various
parts were not included - sometimes there would be no antenna,
sometimes no owner's manual, and sometimes no wall wart.

It may be the case that the SC180 and SC150 use the same wall wart.
The Bearcat owner's manual, which I have downloaded in .pdf format,
says that the correct AC adapter/charger for the SC180 is the AD-70U.
The wall wart I am using is made for an AT&T device, probably an
answering machine. The model number is 350902002COA, and the part
number is MA14L-2001-0012#A. It can supply 200 mA at 9VDC, with the
tip having positive polarity. I am using a homemade battery pack, as
one of the cells in the original battery pack was defective. I think
each NiCd AA cell in my homemade pack is rated at 600 mAh.

That combination works for me.

Scanner Master has a remote head kit for the BC780, and is reportedly working on something similar for the BC785/796. In addition, they have a remote working around a Pocket PC for the 785/796. Both are quite pricey. There's nothing off the shelf that has a remote scanner face on the market now.
In most states, hams are exempted from many scanner laws; go get a Tech license, and you wouldn't have to worry about some stupid law. It's not that hard; a little study and you'd have it....73s Mike

3283. O.T. Actual airline pilot conversations

Newsgroup: rec.radio.scanner
Date: 2004-11-15 01:52:21 UTC
From: Craig Lewis <lewis@instantmessage.net>
Message-ID: <41980BD5.6BE4624E@instantmessage.net>
Source record: 17004
Cross-posted to: rec.radio.scanner,rec.aviation.piloting,misc.consumers

Here are some conversations that airline passengers normally
will never hear. The following are accounts of actual exchanges
between airline pilots and control towers around the world.

Tower: "Delta 351, you have traffic at 10 o'clock, 6 miles!"

Delta 351: "Give us another hint! We ... have digital watches!"
==========

"TWA 2341, for noise abatement turn right 45 Degrees."

"Center, we are at 35,000 feet. How much noise can we make up here?"

"Sir, have you ever heard the noise a 747 makes when it hits a 727?"
==========
>From an unknown aircraft waiting in a very long takeoff queue:
"I'm bored!"

Ground Traffic Control: "Last aircraft transmitting, identify
yourself immediately!"

Unknown aircraft: "I said I was bored, not stupid!"
==========
O'Hare Approach Control to a 747: "United 329 heavy, your traffic
is a Fokker, one o'clock, three miles, Eastbound."

United 239: "Approach, I've always wanted to say this... I've
got the little Fokker in sight."
==========
A student became lost during a solo cross-country flight. While
attempting to locate the aircraft on radar, ATC asked, "What
was your last known position?"

Student: "When I was number one for takeoff."
==========
A DC-10 had come in a little hot and thus had an exceedingly
long roll out after touching down.

San Jose Tower Noted: "American 751, make a hard right
turn at the end of the runway, if you are able. If
you are not able, take the Guadalupe exit off Highway 101,
make a right at the lights and return to the airport."
==========

There's a story about the military pilot calling for a priority
landing because his single-engine jet fighter was running
"a bit peaked." Air Traffic Control told the fighter jock that

he was number two, behind a B-52 that had one engine shut down.

"Ah," the fighter pilot remarked, "The dreaded seven-engine approach."

==========

Taxiing down the tarmac, a DC-10 abruptly stopped, turned around and returned to the gate. After an hour-long wait, it finally took off. A concerned passenger asked the flight attendant, "What, exactly, was the problem?"

"The pilot was bothered by a noise he heard in the engine," explained the flight attendant. "It took us a while to find a new pilot."

==========

A Pan Am 727 flight waiting for start clearance in Munich overheard the following:

Lufthansa (in German): "Ground, what is our start clearance time?"

Ground (in English): "If you want an answer you must speak in English."

Lufthansa (in English): "I am a German, flying a German airplane, in Germany. Why must I speak English?"

Unknown voice from another plane (in a beautiful British accent): "Because you lost the bloody war."

==========

Tower: "Eastern 702, cleared for takeoff, contact Departure on frequency 124.7"

Eastern 702: "Tower, Eastern 702 switching to Departure. By the way, after we lifted off we saw some kind of dead animal on the far end of the runway."

Tower: "Continental 635, cleared for takeoff behind Eastern 702, contact Departure on frequency 124.7. Did you copy that report from Eastern 702?"

Continental 635: "Continental 635, cleared for takeoff, roger; and yes, we copied Eastern... we've already notified our caterers."

==========

One day the pilot of a Cherokee 180 was told by the tower to hold short of the active runway while a DC-8 landed. The DC-8 landed, rolled out, turned around, and taxied back past the Cherokee. Some quick-witted comedian in the DC-8 crew got on the radio and said, "What a cute little plane. Did you make it all by yourself?"

The Cherokee pilot, not about to let the insult go by, came back with a real zinger: "I made it out of DC-8 parts. Another landing like yours and I'll have enough parts for another one."
==========

While taxiing at London's Gatwick Airport, the crew of a US Air flight departing for Ft. Lauderdale made a wrong turn and came nose to nose with a United 727. An irate female ground controller lashed out at the US Air crew, screaming: "US Air 2771, where the hell are you going?! I told you to turn right onto Charlie taxiway! You turned right on Delta! Stop right there. I know it's difficult for you to tell the difference between C and D, but get it right!" Continuing her rage to the embarrassed crew, she was now shouting hysterically: "God! Now you've screwed everything up! It'll take forever to sort this out! You stay right there and don't move till I tell you to! You can expect progressive taxi instructions in about half an hour and I want you to go exactly where I tell you, when I tell you, and how I tell you! You got that, US Air 2771?"

"Yes, ma'am," the humbled crew responded. Naturally, the ground control communications frequency fell terribly silent after the verbal bashing of US Air 2771. Nobody wanted to chance engaging the irate ground controller in her current state of mind. Tension in every cockpit out around Gatwick was definitely running high. Just then an unknown pilot broke the silence and keyed his microphone, asking: "Wasn't I married to you once?"

Second answer: try downloading the owner's manual for the SC180B,
which surely must be quite similar to the SC150

2 Watt FM Stereo Broadcast 88-108 MHz LCD Digital PLL Transmitter

Auction ends in 1 hour!

Ebay item #: 5730774971

Ends Nov-14-04 19:13:56 PST

My Ebay Feedback rating is 100% positive.

Ebay user ID: righteous-jude

Direct link:

http://cgi.ebay.com/ws/eBayISAPI.dll?ViewItem&category=4675&item=5730774971

This transmitter is an assembled and tested unit -- not a kit.

This FM Stereo transmitter is well-known among Ebayer's as being the best transmitter you can get for the money. You'd have to buy a commercial brand FM exciter (such as a Harris) to exceed the specs of this unit. On virtually all FM receivers you would not hear the difference.

You could hook up and transmit any sound source you want, such as:

1. The sound output directly from your computer (to play MP3's) using iTunes or any software you like.

2. Directly connect an iPod, CD Player, tape deck, an XM Satellite Radio etc. right to the transmitter.

3. Use a professional mixer board if you want to "DJ" live. A decent Behringer UB802 Mixer is only $49. Then you could mix and cross fade between two different stereo sources LIVE. Add a decent microphone ($19) so you can talk and people won't know you aren't a commercial station until they realize "Hey, why aren't there any advertisements?"

This FM transmitter is DIGITAL (not analog) and can equal the sound of commercial FM stations. It can transmit anywhere between 88-108 MHz. It outperforms ANY of the Ramsey or other so-called "kit" transmitters, including the "export" version of the FM-100B which Ramsey sells for $429.99 - which is WAY more than the cost of the transmitter I'm selling.

Depending on the quality of the antenna you connect to it* (see "NOTE" section below) and how high up in the air it is, it is possible to get about a 1.5 mile range using a simple homemade outdoor wire antenna, or over 5 miles of range with a $70 pre-made omni directional roof-mounted antenna.

This transmitter has a filtered RF output which means it puts out a clean signal. RF filtering is important to avoid interfering with other FM stations, or if you intend to add an RF Power Amplifier* to increase your range. Most other low cost FM transmitters have bad RF harmonic suppression which means they cause a lot of interference to TV's and radios in your neighborhood, which will attract attention to you from people like Cable TV technicians (something you definitely want to avoid).

For the technical stuff:

This transmitter uses 16-bit Direct Digital Synthesis (D.D.S.) modulation of PLL carrier using 16-Bit digital oversampling, just like the Harris and other Digital-type professional FM Exciters do.

This transmitter is a new design and DOES NOT use the "BA" or "Rohm" analog chip - ANYWHERE IN IT AT ALL. Which is a good thing.

The heart of the transmitting circuit uses a DSC (Digital Signal Controller). This is a 16 bit DSP microcontroller with on-chip Flash, RAM, A/Ds, PWM, and 200k of EEPROM.

D.D.S. modulation technology is used to generate and modulate the carrier signal of higher quality FM Broadcast exciters.

I can't reveal the complete design, but the heart of it uses a Cypress Semiconductor DSC.

A Motorola-designed Class-A linear wide-band amp module (originally designed for use by cable-company operators as line transmission amplifiers) results in virtually no unwanted spurious harmonic output, high reliability and EXTREME SWR ruggedness. The RF output of this transmitter will withstand greater than a 30:1 SWR mismatch without failure. Which means if your antenna shorts-out or dies, this transmitter will not fail.

The transmitter has a LCD digital display, an on-screen menu system with two buttons for adjusting operating parameters such as transmitting frequency, modulation level, MPX pilot level, etc. It can transmit in mono or stereo and runs on 12-24 volts DC input.

Here are the specifications for this transmitter (from the manufacturer):

Transmission Frequency: Adjustable between 87-108 MHz
Tuning Steps: 10 kHz
RF Power Output*: Typ 1Watt @ 13V or 2 Watts @ 24V
Spurious RF Emissions: Better than -45 dB ref. to carrier
Frequency Stability: PLL Typ +/-1KHz
SWR Ruggedness: Withstands 30:1 SWR mismatch
RF Output Connector: BNC type
Audio Input Sensitivity: 0.8V rms for +/- 75 KHz deviation
Signal To Noise Ratio: 60 dBu
Frequency Response: Flat from 20 Hz to 15 KHz
Stereo Separation: >40 dB
Pre-emphasis: 75 uS (standard FCC spec for U.S. FM radio)
Audio Distortion: Better than 0.2 % THD

Audio Input Connectors: RCA Phono Jacks
Power Jack: Coaxial type, 5.5mm O.D. 2.1mm I.D. center positive
DC Power Input: 12 to 24 Vdc Regulated 600mA

I won't list all the details here, you can learn them all by going to http://www.Ebay.com and entering item # 5730774971 using Ebay's "Search" Feature.

This item will be available for only 1 more hour:
auction ends Nov-14-04 19:13:56 PST

"Yeah, OK all that stuff is great, but how can I tell how good this transmitter will sound before I buy it?"

The Ebay auction listing gives instructions for downloading MP3 sound files of recordings made of the FM transmitter signal received live, on-the-air. You can judge for yourself.

** Please read the section of the auction explaining how I got the best sound quality from this transmitter, and how the live off-the-air MP3 recordings were made. **

*NOTE: If you are concerned about gov't compliance regarding the unlicensed use of this transmitter within the United States (or elsewhere), an "RF Attenuator" (also known as a T-pad) may be attached to the output of this transmitter. This is a simple screw-on device which will reduce the transmitter's RF output power to a level within the guidelines mandated by the country in which you intend to operate this transmitter. Guidelines vary from country to country. In the U.S. unlicensed operation of this transmitter is permitted under the mandate of the FCC's guidelines for "Unlicensed Operation of Part 15 Transmitters", provided you do not exceed certain restrictions such as RF output level or type of antenna. Compliance guidelines may be viewed at:

www.fcc.gov/mb/audio/lowpwr.html

Good questions that will be answered when they feel ready to tell us. The "answers" could have a detrimental effect on the findings and sentencing in the long run. So, they'll be looking at it very carefully.

As much as I wanted to see SP found Guilty, I have to agree with this last statement. That isn't right. Hearing it the first time was bad enough. She most likely had it echoing in her head without them repeating it. They can be sick bastards! But, I must wonder where SP's father was - not present at the verdict reading. Has anyone heard? Last I heard, no one knew. You would think he would want to be there.

Did the dude who was trying to repair a scanner a couple weeks ago, ever get it fixed? Haven't seen him list the progress anywhere - unless I missed it. He was thinking the pulses were wrong or something and had said the capacitors looked ok. I forget the model scanner it was.

Just curious.

The AD70U is a pretty common adapter for Uniden, and is the one used by the SC-150. I assumed he had the adapter already, so I didn't supply the info. FYI, it is a 12 volt, 200ma supply, 9 volt is a little low, if you operate the scanner at the same time you are attempting to charge the battery.

> computer and is it fairly easy ?
>
> Thanks for all the help.
> 10-4

Depends. Newer models of Uniden scanners are for the most part programmable
to receive trunked frequencies. Some
are not trunk capable.

You need to know what trunking system is used in your area as the
programming steps require setting the scanner to receive
the correct system (type and other configuration options).

The BC780XLT is a bit complicated to program correctly. But once set, you're
set. You need the frequencies which need to be set into the correct order
and in the right positioning otherwise the system will not work properly to
receive, and you also need to know the talkgroups for better handling.
Didn't get much co-operation from local scanner enthusiasts (they spent alot
of time on smart ass remarks) so I did it myself and works perfectly.

The BC780XLT is alphanumeric so once the frequencies are set it they can be
labelled.

It's a bit complicated but over time becomes fairly easy, but not
nessesarily less complicated.

Do not mix trunked and ordinary frequenices in the same channel.Use a
channel bank to store trunked frequencies and another for ordinary ones.

The BC245XLT is also programmable. But does not have alphanumeric tags.

Both the BC245 and the BC780XLT can use software if you use a 9 pin serial
cable

The biggest problem is that the trunked frequencies have to be analog
otherwise you need to get a digital capable scanner to handle APCO-25, and
if the police frequencies are on a digital system other than APCO-25, you're
out of luck. Most police

frequencies in the larger cities (but not all of them) are digital so that
the bad guys don't get an idea that Sgt. Wiggum is out
on patrol if if he's not eating donuts and drinking coffee.

Can you help me please?
I would like to know witch one of these 2 scanner is better
AOR AR 8200 Mark 3U or ICOM IC-R20 (European version)
One say Europen version and and preprogrammed with tv and the other not one
got frequenecy 530 kHz to 3000 and the other up to 3300 MHZ plz help me for
making a good choice ! does the europen version is only good for europe ?
Does the other one can record and broadcast TV?
I was looking for a good scanner for police. Thank you!

LMAO...Thanks these were really funny. Mind if I use some of these in my
next trek ?
Especially the one about irate controller. Some big airports hate small
crafts buzzing into their routine and have a habit of being dry with us
amateur pilots.
Thanks for sharing.

Old but still funny. Lest anybody be fooled, however, these are NOT
"actual exchanges between airline pilots and control towers around the
world". They are fictional.

3315. Great Deal on a VHF/UHF Scanner

Newsgroup: rec.radio.scanner
Date: 2004-11-16 00:41:57 UTC
From: Bill Crocker <wcrocker007@comcast.net>
Message-ID: <Y-GdnSHA6OZI0QTcRVn-gg@comcast.com>
Source record: 17029

I usually buy the best scanners I can afford, state-of-the-art! However, I noticed Radio Shack had their low-end desktop scanner on sale, and I thought just for fun, I'd pick one up.

It's the PRO-2018 (Cat #20-424) Regular Price: $99.99 On Sale For: $79.99

Note, this scanner does not support trunk-tracking, it has no Alpha Tags, and certainly does not support reception of APCO-25 Digital. However, what it does, it does very well! A basic VHF/UHF scanner. Easy to program, easy to operate, excellent sensitivity, (even receives the weather channel, which my others did not, in my area). The audio is loud, and clear! The squelch is very quiet!

Frequency Coverage: 29-54, 108-136.9875, 137-174, 380-512MHz

Considering I live in Macomb Twp, Michigan, and most everything in my area falls within these bands, it's an ideal scanner for my home office.

Check it out:

http://www.radioshack.com/product.asp?catalog%5Fname=CTLG&category%5Fname=CTLG%5F008%5F009%5F010%5F005&product%5Fid=20%2D424

> the scanner at the same time you are attempting to charge the battery.

Thanks. I hadn't known that. I haven't noticed any problems along
those lines, but since I've never tried using the correct adapter, I
have no way of knowing how much better the performance would be with
the right part in place.

I assume (yeah, dangerous) that there is an internal regulator in the
SC180B to drop the wall wart's output voltage to the correct voltage
for charging the cells in the battery pack. Whether Vcc for the
scanner is that lower, regulated voltage, I have no way of knowing.
Anybody have an online schematic for that scanner?

BTW, I like the SC180B a lot. I think it's my favorite handheld. I'm
kind of surprised I feel that way, as I been wary of the idea of
Uniden's proprietary battery pack. I have learned that they are easily
disassembled for replacing bad individual cells as they fail, so it's
not the issue I had thought it woud be. I have made a few spare
battery packs by now. The plugs are commonly found in cordless phones,
as are spare cells. I have a whole bunch of cordless phones that I
have liberated from the trash piles.

Darn, I didn't know they still sold scanners without 800 MHz.

> Paul, you've been a great help Thanks .
> I'll look into what you just pointed out regarding the model .
> But do you need a computer and program to re-program the scanner ?

Techncially no. You can do the finger dancing yourself. The main benfit of the software is

1. You can download the scanner's current configuration and save it in case something real bad happens
2. Being able to program within the software without feeding into the scanner, a matrix of scanner configurations.

Suppose you have one configuration for listening to local area offerings. With the programming you can set another configuration based on your travel plans:

- perhaps a collection of aviation frequencies for different airports if you are going from one city to another one.
- perhaps a collection of police frequencies for different districts that you'll be going through.
- perhaps a collection of railroad frequencies.

Using the software can be said to a wimpy way to set a scanner. I did it manually after not getting much but smart ass answers from polite questions from the local scanner group.

You'll need to do a bit reading too. The manuals for scanners are not much better written than those for computer products. In Uniden's case, they really should hire someone who can write and layout a better manual.

The scanner is not dependent on the PC for programming by any means. Consider it to be like programming the scanner manually is like driving a standard shift. Programming is like driving an automatic. But since you drove the manual, you know how things work simply because you did it yourself without the aid of the software. Big difference.

The scanner software for the PC is one of those "nice to have" things. I have a real good programming software for my Radio Shack Pro-95 (which is far superior and sensitive than Uniden's BC245.Win 95. There's no complement for the BC780XLT other than the offerings from Butel which is good but find the Win95 for the Pro-95 to be excellent and very easy to use and no fancy additions such as display (don't need it as the scanner is closeby and finger reachable anyway). The Pro-95 is what the

BC245 should have been). Had another software program for the BC780XLT, but it went pffft when my operating system suddenly went pfffft.

By the way. Use http://www.radioreference.com/ to find the trunked matrix in your area. It's an excellent base to begin with
and there's a whole schmeal of state and provincial isolated forums (most of the people there will help rather than help themselves improve on their smart ass answers). You need a log in account to get to the good stuff in there, but the account
is free. There's a huge amount of junk (good stuff) in there.

I hardly go anywhere without my scanner (either the 780XLT or the Pro-95, and on some longer trips, even take both).

Only thing missing from my vehicle is a ham radio license in my wallet and an APRS capable Kenwood model TM-D700A VHF ham radio next to the BC780XLT.

But workin' on those two missing things..

10-7 (73's)

The manual for my 150 states (somewhere, I don't have it handy right now) that when the battery is discharged and you operate the scanner while charging the battery, it will take longer to recharge the battery. I would think that feeding it 9 volts instead of the 12 volts it's expecting would have some effect. Further than that I do not know.

My SC-150 is a favorite. Even though it lacks the bells and whistles of some of my newer scanners, I can't bring myself to part with it. Still on the original battery pack, BTW.
